W. KIPRONO IBANEZ LLARIO (ASENATH.), Asenanth Kiprono, 2020-09-28 Solar power for pumping groundwater has a vast potential for improving the sustainability of water supply schemes However experience also shows that a lack of knowledge capacity and expertise to design and implement such schemes is holding back their adoption This book bridges this gap to equip engineers and technicians with the requisite knowledge for design implementation and operation of sustainable solar powered water schemes Solar Pumping for Water Supply is a state of the art review of solar water pumping technology combined with practical insights lessons and best practices drawn from experience It takes the reader step by step through the different phases that comprise a solar water pumping project namely assessment design purchase of equipment installation operation and management The book also covers the economics of using solar pumping technology especially when compared to diesel generators and hand pumps Finally the social aspects are included specifically relating to the operation and management of solar pumping systems and the role that beneficiaries implementers government and the private sector might play to ensure long lasting water supply The book provides links and references to tools documents and videos to accompany the content of the different chapters Essential reading for solar technical practitioners at NGOs UN agencies government offices and private sector including Global and Regional Technical advisors and Field engineers wanting to understand and know how to design water systems using solar power A basic knowledge in the field of water supply is assumed but no previous knowledge of solar photovoltaic technology is required Alberto Ib ez

**Software Quality - ECSQ 2002** Jyrki Kontio, Reidar Conradi, 2003-08-01 Software professionals and companies live in a new world today Increasingly complex systems need to be built faster and cheaper While many of the established approaches in software quality are still valid the software quality community is going through a paradigm shift that requires a re assessment of our current method and tool portfolio as well as creating new and more effective solutions We have selected two themes for this conference to highlight this paradigm shift Our first theme production of attractive and reliable software at Internet speed sums up the dilemma many software organisations face In order to be competitive software should contain advanced features and run reliably yet it should be developed quickly and cost effectively for the right market window Finding the right balance between these objectives is a critical question that will determine business success in the years to come Our second theme production of software with a dynamic partnership network highlights the current trend of using partnerships and subcontractors as integral players in the software development process Partnerships sometimes need to be created quickly to respond to a market opportunity yet the costs and speed of cooperation must be competitive Different companies have different processes quality tools and cultures yet they should cooperate seamlessly for the best result
