A cutting-edge introduction to key topics in modern economic theory for first-year graduate students in economics and related fields Volume II of *Microeconomic Foundations* introduces models and methods at the center of modern microeconomic theory. In this textbook, David Kreps, a leading economic theorist, emphasizes foundational material, concentrating on seminal work that provides perspective on how and why the theory developed. Because noncooperative game theory is the chief tool of modeling and analyzing microeconomic phenomena, the book stresses the applications of game theory to economics. And throughout, it underscores why theory is most useful when it supports rather than supplants economic intuition. Introduces first-year graduate students to the models and methods at the core of microeconomic theory today Covers an extensive range of topics, including the agency theory, market signaling, relational contracting, bilateral bargaining, auctions, matching markets, and mechanism design Stresses the use—and misuse—of theory in studying economic phenomena and shows why theory should support, not replace, economic intuition Includes extensive appendices reviewing the essential concepts of noncooperative game theory, with guidance about how it should and shouldn't be used Features free online supplements, including chapter outlines and overviews, solutions to all the problems in the book, and more This book teaches microeconomics as a way of looking at the world, using plenty of new applications and examples to demonstrate the theory. Because it uses calculus (only in footnotes), this book is considered to be in the upper mid-range in its mathematical rigor. An optimal balance of theory and applications is maintained by working from the specific to the general—with many lively and interesting examples used as a means of developing economic theory in a careful and rigorous way. A seven-part organization covers numerous topics under the headings of: an introduction to microeconomics, individual choice, production and cost, markets for goods, resource markets and general equilibrium, imperfect competition, and uncertainty and asymmetric information. For individuals trying to apply the theory of microeconomics to the economics of the real world. *Models in Microeconomic Theory* covers basic models in current microeconomic theory. Part I (Chapters 1-7) presents models of an economic agent, discussing abstract models of preferences, choice, and decision making under uncertainty, before turning to models of the consumer, the producer, and monopoly. Part II (Chapters 8-14) introduces the concept of equilibrium, beginning, unconventionally, with the models of the jungle and an economy with indivisible goods, and continuing with models of an exchange economy, equilibrium with rational expectations, and an economy with asymmetric information. Part III (Chapters 15-16) provides an introduction to game theory, covering strategic and extensive games and the concepts of Nash equilibrium and subgame perfect equilibrium. Part IV (Chapters 17-20) gives a taste of the topics of mechanism design, matching, the axiomatic

analysis of economic systems, and social choice. The book focuses on the concepts of model and equilibrium. It states models and results precisely, and provides proofs for all results. It uses only elementary mathematics (with almost no calculus), although many of the proofs involve sustained logical arguments. It includes about 150 exercises.
