This book has more than 3100 subtraction facts for daily practice by students. Each page has 2 different sets consisting of 18 problems each. It is recommended for students to attempt 1 set daily for consistent practice. Book starts with addition strategies to help students grasp basic concepts and get started. Once students start gaining confidence in individual facts, they can review their knowledge by solving mixed facts. Book can be used to track practice time for each set. Date and time can be recorded at top of each page. Answer to each problem is given at the end of the book. Knowing subtraction facts is helpful not only in academics; we frequently use subtraction in our daily lives too. Just like learning to walk before you can run, learning subtraction and familiarizing yourself with numbers are building blocks for other math topics taught in school. Mastering the basic math facts develops automaticity in kids. Automaticity is the ability to do things without occupying the mind with the low level details that are required; this is usually the result of consistent learning, repetition, and practice. For instance, an experienced cyclist does not have to concentrate on turning the pedals, balancing, and holding on to the handlebars. Instead, those processes are automatic and the cyclist can concentrate on watching the road, the traffic, and other surroundings. Until students have developed sufficient sensory-cognitive tools supporting access to symbolic memory, they will not be able to image, store or retrieve all of the basic facts with automaticity. Therefore, students need a comprehensive, developmental, and multi-sensory structured system for developing automaticity with the facts. This book allows you to team teach with a science specialist to drive home key library and media curriculum goals. The Problem Every year my students struggled with retaining information about key topics that we covered in math class. Through the years I have tried a variety of Spiral Review math programs with mixed results. Some of these programs required too much of a class time commitment. Others, seemed unfocused or didn't hammer away at key concepts. Frustrated with the options available, I began to experiment and develop The Great 8 Middle School Spiral Review. The classroom has served as my laboratory to test and refine the Great 8. The Basics The Great 8 is a 25 week Spiral Review of key mathematical concepts for middle school. The focal point is for 7th grade, but the Great 8 is also ideal for stronger 6th grade students and 8th and 9th graders that need to review these key concepts. The Great 8 includes 100 worksheets and 25 Quizzes. Each worksheet and Quiz includes a total of 8 questions. The combination of all the worksheets and Quizzes equals a total of 1,000 questions. Each week includes 4 worksheets and a quiz. How it Works At the beginning of a week a packet of four worksheets is given to each student. The first and third worksheets of the week are the same questions (with different answers) and the second and fourth are also the same. At the end of the week 4 questions are taken from the first/third worksheets and 4 questions are taken from the second/fourth worksheets and are used to create the quiz. This guidebook is for college instructors who teach a course in Introduction to Logic at a teachers college or provide a workshop in this subject for in-service mathematics teachers. It can also be used by high school mathematics teachers for teaching students who are capable and interested in Logic. Learning is based on reading Alice's Adventures in Wonderland, and discussing quotes from that book as a trigger for developing basic notions in Logic. This guidebook includes the student's worksheets with exemplary solutions, the background in elementary logic, and pedagogical comments. There is a student's workbook that accompanies this guidebook which includes the student's worksheets without solutions. Ordinary textbooks for such a course are purely mathematical in their nature, and students usually find the course difficult, boring and very technical. Our approach is likely to motivate the students through reading the classic novel Alice's Adventures in Wonderland, written by Lewis Carroll who was not only one of the best storytellers but also a logician.
