

**Diameter and distance potentiometers - Calibration with code C80.**

Enter C80 by simultaneously pressing and holding the CODE and ALU buttons and rotating the main shaft. When C80 appears just release the buttons.

... is read out for 1 second. Then the voltages reading for each pot is displayed

The left-hand reading is the voltage setting of the diameter potentiometer.  
The right-hand reading is the voltage setting of the distance potentiometer.

**Step 1**

Setting the diameter potentiometer:

Mount the wheel adapter on the machine. Pull out the distance gauge arm and place on the edge of wheel adapter. The reading in the left display should be set between 3.55 – 3.60. If adjustment is needed, remove the weight tray and adjust pot on the small gear wheel by using a flat screwdriver (the 10 mm nut may need to be loosened) to turn the shaft of pot. Replace weight tray. On the 2400 the display panel has to be removed first before the weight tray.

Setting the distance potentiometer:

Bring the distance gauge arm back to the home position (resting on the weight tray) the reading in the right display should be within 4.25 to 4.30. If adjustment is needed remove the weight tray and adjust pot on large wheel on left side of machine by using a flat screwdriver (the 10 mm nut may need to be loosened) to turn the shaft of pot. Replace weight tray. On the 2400 the display panel has to be removed first before the weight tray.

Press the CODE button to store both values.

**Step 2**

Pull out the distance gauge arm by exactly 290 mm (29 on the scale) and press the CODE button to store the value. **IMPORTANT:** Be careful to pull the gauge out to 290 mm or 29 on the scale. This is almost fully extended.

**Earth Accretionary Systems in Space and Time** Peter Anthony Cawood, Alfred Kröner, 2009 Accretionary orogens form at convergent plate boundaries and include the supra subduction zone forearc magmatic arc and backarc components They can be broken into retreating and advancing types based on their kinematic framework and resulting geological character Accretionary systems have been active throughout

Earth history extending back until at least 3.2 Ga and provide an important constraint on the initiation of horizontal motion of lithospheric plates on Earth. Accretionary orogens have been responsible for major growth of the continental lithosphere through the addition of juvenile magmatic products but are also major sites of consumption and reworking of continental crust through time. The aim of this volume is to provide a better understanding of accretionary processes and their role in the formation and evolution of the continental crust. Fourteen papers deal with general aspects of accretion and metamorphism and discuss examples of accretionary orogens and crustal growth through Earth history from the Archaean to the Cenozoic.

**Continental Basalts and Mantle Xenoliths** C. J. Hawkesworth, M. J. Norry, 1983 *Pannotia to Pangaea* B.

Murphy, R.A. Strachan, C. Quesada, 2021-01-28 Special Publication 503 celebrates the career of R. Damian Nance. It features 27 articles with more than 110 authors based in 18 different countries. These articles include contributions on the processes responsible for the formation and breakup of supercontinents, the controversies concerning the status of Pannotia as a supercontinent, the generation and destruction of Paleozoic oceans, and the development of the Appalachian-Ouachitan-Caledonide-Variscan orogens. In addition to field work, the approaches to gain that understanding include examining the relationships between stratigraphy and structural geology, precise geochronology, geochemical and isotopic fingerprinting, geodynamic modelling, regional syntheses, palaeogeographic modelling, and good old-fashioned arm-waving. The wide range of topics mirrors the breadth and depth of Damian's contributions, interests, and expertise. Like Damian's papers, the contributions range from the predominantly conceptual to detailed field work, but all are targeted at understanding important tectonic processes. Their scope not only varies in scale from global to regional to local, but also in the range of approaches required to gain that understanding. *The Compu-mark Directory of U.S. Trademarks*, 1989 **The Upper Mantle** A. R. Ritsema, 2013-10-22 *Developments in Geotectonics* 4. The Upper Mantle focuses on the upper mantle and its influence on the development of the earth's crust, including the history of the moon and other planets, and volcanology. The selection first offers information on the origin of the earth, including ideas on the formation process of the terrestrial planets, condensation of dust particles, nature of the earth's core, thermal history of the earth, and fractionation of iron in the terrestrial planets. The text then ponders on the beginning of continental evolution, as well as the oldest rocks of the earth's crust, thermal history of the moon, and early history of the other planets. The text elaborates on magmatic activity as the major process in the chemical evolution of the earth's crust and mantle, trends in the evolution of continents, progress and problems in volcanology, and pressure and temperature conditions and tectonic significance of regional and ocean floor metamorphism. The manuscript also takes a look at the state of mantle minerals, melting temperatures in the earth's mantle, and geomagnetic induction studies and the electrical state of the upper mantle. The publication is a dependable reference for readers interested in the study of the upper mantle. *Introduction to Numerical Geodynamic Modelling* Taras Gerya, 2010.
