David C Lindberg

**The Beginnings of Western Science** David C. Lindberg,2010-02-15 When it was first published in 1992 The Beginnings of Western Science was lauded as the first successful attempt ever to present a unified account of both ancient and medieval science in a single volume Chronicling the development of scientific ideas practices and institutions from pre Socratic Greek philosophy to late Medieval scholasticism David C Lindberg surveyed all the most important themes in the history of science including developments in cosmology astronomy mechanics optics alchemy natural history and medicine In addition he offered an illuminating account of the transmission of Greek science to medieval Islam and subsequently to medieval Europe The Beginnings of Western Science was and remains a landmark in the history of science shaping the way students and scholars understand these critically formative periods of scientific development It reemerges here in a second edition that includes revisions on nearly every page as well as several sections that have been completely rewritten For example the section on Islamic science has been thoroughly retooled to reveal the magnitude and sophistication of medieval Muslim scientific achievement And the book now reflects a sharper awareness of the importance of Mesopotamian science for the development of Greek astronomy In all the second edition of The Beginnings of Western Science captures the current state of our understanding of more than two millennia of science and promises to continue to inspire both students and general readers

**The Foundations of Modern Science in the Middle Ages** Edward Grant,1996-10-28 This 1997 book views the substantive achievements of the Middle Ages as they relate to early modern science

**Early Greek Science** G E R Lloyd,2012-09-30 In this new series leading classical scholars interpret afresh the ancient world for the modern reader They stress those questions and institutions that most concern us today the interplay between economic factors and politics the struggle to find a balance between the state and the individual the role of the intellectual Most of the books in this series centre on the great focal periods those of great literature and art the world of Herodotus and the tragedians Plato and Aristotle Cicero and Caesar Virgil Horace and Tacitus This study traces Greek science through the work of the Pythagoreans the Presocratic natural philosophers the Hippocratic writers Plato the fourth century B C astronomers and Aristotle G E R Lloyd also investigates the relationships between science and philosophy and science and medicine he discusses the social and economic setting of Greek science he analyses the motives and incentives of the different groups of writers

**The Six Systems of Indian Philosophy** Friedrich Max Müller,1919

**The Cambridge History of Science: Volume 2, Medieval Science** David C. Lindberg,Michael H. Shank,2013-10-07 This volume in the highly respected Cambridge History of Science series is devoted to the history of science in the Middle Ages from the North Atlantic to the Indus Valley Medieval science was once universally dismissed as non existent and sometimes it still is This volume reveals the diversity of goals contexts and accomplishments in the study of nature during the Middle Ages Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date history of medieval science currently available Intended to provide a balanced and inclusive treatment of the medieval world contributors consider scientific learning and advancement in the cultures associated with the Arabic Greek Latin and Hebrew languages Scientists historians and other curious readers will all gain a new appreciation for the study of nature during an era that is often misunderstood

*Reconfiguring the World* Margaret J. Osler,2010-09-01 Change in human understanding of the natural world during the early modern period marks one of the most important episodes in intellectual history This era is often referred to as the scientific revolution but recent scholarship has challenged traditional accounts Here in *Reconfiguring the World* Margaret J Osler treats the development of the sciences in Europe from the early sixteenth to the late seventeenth centuries as a complex and multifaceted process The worldview embedded in modern science is a relatively recent development Osler aims to convey a nuanced understanding of how the natural world looked to early modern thinkers such as Galileo Descartes Boyle and Newton She describes investigation and understanding of the natural world in terms that the thinkers themselves would have used Tracing the views of the natural world to their biblical Greek and Arabic sources Osler demonstrates the impact of the Renaissance recovery of ancient texts printing the Protestant Reformation and the exploration of the New World She shows how the traditional disciplinary boundaries established by Aristotle changed dramatically during this period and finds the tensions of science and religion expressed as differences between natural philosophy and theology Far from a triumphalist account Osler s story includes false starts and dead ends Ultimately she shows how a few gifted students of nature changed the way we see ourselves and the universe

**Against Methodology in Science and Religion** Josh Reeves, 2018-09-18 Since its development as a field over the last part of the twentieth century scholars in science and religion have been heavily concerned with methodological issues Following the lead of Thomas Kuhn many scholars in this interdisciplinary field have offered proposals that purport to show how theology and science are compatible by appropriating theories of scientific methodology or rationality Arguing against this strategy this book shows why much of this methodological work is at odds with recent developments in the history and philosophy of science and should be reconsidered Firstly three influential methodological proposals are critiqued Lakatosian research programs Alister McGrath's Scientific Theology and the Postfoundationalist project of Wentzel van Huyssteen Each of these approaches is shown to have a common failing the idea that science has an essential nature with features that unite scientific or even rational inquiry across time or disciplines After outlining the issues this failing could have on the viability of the field the book concludes by arguing that there are several ways scholarship in science and religion can move forward even if the terms science and religion do not refer to something universally valid or philosophically useful This is a bold study of the methodology of science and religion that pushes both subjects to consider the other more carefully As such it will be of great interest to scholars in religious studies theology and the philosophy of science

**Ancient Astrology** Tamysn Barton, 2002-11 An account of astrology from its beginnings in Mesopotamia focusing on the Greco Roman world Ancient Astrology examines the theoretical development and changing social and political role of astrology

**The Found and the Made** Dan Bruiger, 2017-07-05 This book critically examines how mathematical modelling shapes and limits a scientific approach to the natural world and affects how society views nature It questions concepts such as determinism reversibility equilibrium and the isolated system and challenges the view of physical reality as passive and inert Dan Bruiger argues that if nature is real it must transcend human representations In particular it can be expected to self organize in ways that elude a mechanist treatment This interdisciplinary study addresses several key areas the crisis in modern physics and cosmology the limits and historical psychological and religious roots of mechanistic thought and the mutual effects of the scientific worldview upon society's relationship to nature Bruiger demonstrates that there is still little place outside biology for systems that actively self organize or self define Instead of appealing to multiverses to resolve the mysteries of fine tuning he suggests that cosmologists look toward self organizing processes He also states that physics is hampered by its external focus and should become more self reflective If scientific understanding can go beyond a stance of prediction and control it could lead to a relationship with nature more amenable to survival The Found and the Made fills a void between popular science writing and philosophy It will appeal to naturalists environmentalists science buffs professionals and students of cultural history evolutionary psychology gender studies and philosophy of mind

*Science and Christianity in Pulpit and Pew* Ronald L. Numbers, 2007-09-10 As past president of both the History of Science Society and the American Society of Church History Ronald L Numbers is uniquely qualified to assess the historical relations between science and Christianity In this collection of his most recent essays he moves beyond the clichés of conflict and harmony to explore the tangled web of historical interactions involving scientific and religious beliefs In his lead essay he offers an unprecedented overview of the history of science and Christianity from the perspective of the ordinary people who filled the pews of churches or loitered around outside Unlike the elite scientists and theologians on whom most historians have focused these vulgar Christians cared little about the discoveries of Copernicus Newton and Einstein Instead they worried about the causes of the diseases and disasters that directly affected their lives and about scientists preposterous attempts to trace human ancestry back to apes Far from dismissing opinion makers in the pulpit Numbers closely looks at two the most influential Protestant theologians in nineteenth century America Charles Hodge and William Henry Green Hodge after decades of struggling to harmonize Gods two revelations in nature and in the Bible in the end famously described Darwinism as atheism Green on the basis of his careful biblical studies concluded that Ussher's chronology was unreliable thus opening the door for Christian anthropologists to accommodate the subsequent discovery of human antiquity In *Science without God* Numbers traces the millennia long history of so called methodological naturalism the commitment to explaining the natural world without appeals to the supernatural By the early nineteenth century this practice was becoming the defining characteristic of science in the late twentieth century it became the central point of attack in the audacious attempt of intelligent designers to redefine science Numbers ends his reassessment by arguing that although science has markedly changed the world we live in it has contributed less to secularizing it than many have claimed Taken together these accessible and authoritative essays form a perfect introduction to Christian attitudes towards science since the 17th century

**Atheist Delusions** David Bentley Hart, 2009-04-21 Religious scholar Hart argues that contemporary antireligious polemics are based not only upon conceptual confusions but upon facile simplifications of history and provides a powerful antidote to the New Atheists misrepresentations of the Christian past

*Landscape and Religion from Van Eyck to Rembrandt* Boudewijn Bakker, 2017-07-05 Offering a corrective to the common scholarly characterization of seventeenth century Dutch landscape painting as modern realistic and secularized Boudewijn Bakker here explores the long history and purpose of landscape in Netherlandish painting In Bakker's view early Netherlandish as well as seventeenth century Dutch painting can be understood only in the context of the intellectual climate of the day Concentrating on landscape painting as the careful depiction of the visible world Bakker's analysis takes in the thought of figures seldom consulted by traditional art historians such as the fifteenth century philosopher Dionysius the Carthusian the sixteenth century religious reformer John Calvin the geographer Abraham Ortelius and the seventeenth century poet Constantijn Huygens Probing their conception of nature as the first Book of God and art as its representation Bakker identifies a world view that has its roots in the traditional Christian perceptions of God and creation *Landscape and Religion from Van Eyck to Rembrandt* imposes a new layer of interpretation on the richly varied landscapes of the great masters In so doing it adds a new dimension to the insights offered by modern art historical research Further Bakker's explorations of early modern art and literature provide essential background for any student of European intellectual history

**Science in the Middle Ages** David C. Lindberg, 1978 In this book sixteen leading scholars address themselves to providing as full an account of medieval science as current knowledge permits Designed to be introductory the authors have directed their chapters to a beginning audience of diverse readers

*Galileo Revisited* Dom Paschal Scotti, 2017-08-25 No other work on Galileo Galilei has brought together such a complete description of the historical context in its political cultural philosophical religious scientific and personal aspects as this volume has done In addition to covering the whole of Galileo's life it focuses on those things that are most pertinent to the Galileo Affair which culminated in his condemnation by the Inquisition in 1633 It also includes an extensive discussion of the relationship between religion and science in general and of the relationship between Christianity and science in particular without which a true understanding of the affair is much weakened This discussion of the relationship of Christianity with science a long generally positive relationship is most timely since the case of Galileo is as many historians and Pope Benedict XVI have stated the beginning of the alienation of the Church from much of the intellectual culture of our present age The warfare between science and religion is an old myth that should finally be retired but for many it is still axiomatic This work shows the significance of astrology in the history of society and the Church Galileo was a master astrologer and the importance of the internal tensions and factions within the Roman Curia in the seventeenth century It also tells of the profound battles among Church leadership over the direction of the Church in a time of uncertainty and intellectual and cultural ferment The Galileo Affair is not just of its time and place and it is not just about Galileo but it touches upon that perennial issue of how the Church deals with issues of adaptation and change

*Science in Flux* Mark D. Bowles, 2006

*Natural Particulars* Anthony Grafton, Nancy G. Siraisi, 1999 Recently the history of science in early modern Europe has been both invigorated and obscured by divisions between scholars of different schools One school tends to claim that rigorous textual analysis provides the key to the development of science whereas others tend to focus on the social and cultural contexts within which disciplines grew This volume challenges such divisions suggesting that multiple historical approaches are both legitimate and mutually complementary

**T&T Clark Handbook of Christian Theology and the Modern Sciences** John P. Slattery, 2020-10-01 This handbook surveys the many relationships between scientific studies of the world around us and Christian concepts of the Divine from the ancient Greeks to modern ecotheology From Augustine to Hildegard of Bingen Genesis to Frederick Douglass and physics to sociology this volume opens the intersections of Christian theology and science to new concepts voices and futures The central goal of the handbook is to bring new perspectives to the foreground of Christian theological engagement with science and to highlight the many engagements today that are not often identified as science theology discussions The handbook thus includes several aspects not found in previous handbooks on the same topic significant representation from the three major branches of Christianity Orthodox Roman Catholic and Protestant multiple essays on areas of modern science not traditionally part of the theology and science dialogue such as discussions of race medicine and sociology a collection of essays on historical theologians approaches to nature and science T Catholic Protestant and Orthodox surveys of theology science scholarship in the 20th and 21st centuries and ten explorations in Christian theology today from Einsteinian physics to decolonial sociology The 24 chapters than span the volume offer the reader whether scholar student or layperson an essential resource for any future conversations around science and Christian theology

**A History of Western Astrology Volume II** Nicholas Campion, 2009-04-16 Astrology is a major feature of contemporary popular culture. Recent research indicates that 99% of adults in the modern west know their birth sign. In the modern west astrology thrives as part of our culture despite being a pre-Christian, pre-scientific world view. Medieval and Renaissance Europe marked the high water mark for astrology. It was a subject of high theological speculation, was used to advise kings and popes and to arrange any activity from the beginning of battles to the most auspicious time to have one's hair cut. Nicholas Campion examines the foundation of modern astrology in the medieval and Renaissance worlds. Spanning the period between the collapse of classical astrology in the fifth century and the rise of popular astrology on the web in the twentieth century, Campion challenges the historical convention that astrology flourished only between the twelfth and seventeenth centuries. Concluding with a discussion of astrology's popularity and appeal in the twenty-first century, Campion asks whether it should be seen as an integral part of modernity or as an element of the post-modern world.

The Beginnings Of Western Science European Scientific Tradition In Philosophical Religious And Institutional Context 600 Bc To Ad 1450 David C Lindberg: Bestsellers in 2023 The year 2023 has witnessed a noteworthy surge in literary brilliance, with numerous engrossing novels enthralling the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the engaging narratives that have charmed audiences this year. The Must-Read : Colleen Hoover's "It Ends with Us" This touching tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. The Beginnings Of Western Science European Scientific Tradition In Philosophical Religious And Institutional Context 600 Bc To Ad 1450 David C Lindberg : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. The Beginnings Of Western Science European Scientific Tradition In Philosophical Religious And Institutional Context 600 Bc To Ad 1450 David C Lindberg : Delia Owens "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a exceptional and suspenseful novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
