Risk-Based Maintenance for Electricity Network Organizations Ravish Preshant Yashraj Mehairjan,2016-12-24 This book focuses on the introduction of new and modern maintenance management frameworks of assets in the electricity gas network sector and more specifically on electricity networks for distribution The author describes methodologies for developing and implementing maintenance management maturity models using case studies to show how these have been applied These maturity models are discussed as part of an overarching multi disciplinary organizational maintenance management

professionalization framework This book adds a new dimension to the well known Reliability Centered Maintenance RCM method by incorporating failure modes via multiple scenarios into business values by means of statistical risk calculation methods The author demonstrates a method called Utility Risk Linked RCM which uses a statistical tool to develop failure models which can be used to predict future failure behavior of assets in relation to corporate business values This new method is a practical structured and comprehensive framework for assessing risk based maintenance policies The book also proposes a condition monitoring framework that can be used as a guide to assist asset managers in identifying the relationship between failure modes ageing processes to select amongst condition monitoring regimes

Customer Experience Management for Water Utilities Peter Prevos,2017-10-15 Customer Experience Management for Water Utilities presents a practical framework for water utilities to become more focussed on their customers This framework is founded on Service Dominant Logic a contemporary theory of marketing that explains value creation as a process of co creation between the customer and the service provider Standard models for marketing do not apply to monopolistic water utilities without modification The first two chapters develop a marketing mix tailored to water utilities to assist them with providing customer centric services The water utility marketing mix includes the value proposition internal marketing service quality and customer relationships he book discusses the four dimensions of the marketing mix Chapter three presents a template for developing value propositions to assist water utilities in positioning their service This model is based on the needs and wants of individual customer segments and the type of service Chapter four discusses internal marketing activities designed to improve the way utilities add value for customers This chapter also analyses potential tensions between engineering and science oriented employees and proposes methods to resolve these tensions The final chapters describe customer relationships from both a theoretical and practical perspective The customer experience is a complex phenomenon that is difficult to quantify The book provides a method to measure the experience of the customer based on service quality theory and psychometric statistics Customer Experience Management for Water Utilities is one of the first books that discusses urban water supply from a marketing perspective This perspective provides a unique insight into an industry which is often dominated by technological concerns This book is a valuable resource for Water Utility Managers and Regulators as well as for Marketing Consultants seeking to assist water utilities to become more customer focussed
