Minding Movies David Bordwell, Kristin Thompson, 2011-04-15 David Bordwell and Kristin Thompson are two of America's preeminent film scholars. You would be hard pressed to find a serious student of the cinema who hasn't spent at least a few hours huddled with their seminal introduction to the field *Film Art* now in its ninth edition or a cable television junkie unaware that the Independent Film Channel sagely christened them the Critics of the Naughts. Since launching their blog *Observations on Film Art* in 2006, the two have added web virtuosos to their growing list of accolades, pitching unconventional long form pieces engaged with film artistry that have helped to redefine cinematic storytelling for a new age and audience. *Minding Movies* presents a selection from over three hundred essays on genre, movies, art films, animation, and the business of Hollywood that have graced Bordwell and Thompson's blog. Informal pieces conversational in tone but grounded in three decades of authoritative research, the essays gathered here range from in-depth analyses of individual films such as *Slumdog Millionaire* and *Inglourious Basterds* to adjustments of Hollywood media claims and forays into cinematic humor. For Bordwell and Thompson, the most fruitful place to begin is how movies are made, how they work, and how they work on us. Written for film lovers, these essays on topics ranging from *Borat* to blockbusters and back again will delight current fans and gain new enthusiasts. Serious but not solemn, vibrantly informative without condescension, and above all illuminating reading, *Minding Movies* offers ideas sure to set film lovers thinking and keep them returning to the silver screen.

Calculus Paul A. Foerster, 2005 The acclaimed *Calculus Concepts and Applications* is now available in a new edition revised to reflect important changes in the Advanced Placement curriculum and updated to incorporate feedback from instructors throughout the U.S. With over 40 years of experience teaching AP Calculus, Paul Foerster developed *Calculus Concepts and Applications* with the high school student in mind but with all the content of a college level course. Like the previous edition, the second edition follows the AP Calculus curriculum for both AB and BC levels. In *Calculus Concepts and Applications*, students start off with calculus. Review of precalculus occurs at various points when it's needed. The text combines graphing calculator technology with a unique real world application approach and presents calculus as a study of just four fundamental concepts: limits, derivatives, definite integrals, and indefinite integrals. Students learn these concepts using algebraic, numerical, graphical, and verbal approaches. As a result, students with a wider range of abilities can be successful in calculus, not just those who are strong in algebra. The accompanying set of *Explorations* in the *Instructor's Resource Book* designed for cooperative group work gives students hands-on experience with new topics before they are formally introduced. In this new edition, derivatives of transcendental functions, related rates, as well as area and volume applications of the definite integral are introduced earlier. Additionally, the *Instructor's Resource Book* includes projects utilizing the CBL, The Geometer's Sketchpad, and Fathom Dynamic Statistics software, giving students extended opportunities to explore and understand calculus in depth.
