Biotechnology Larry V. McIntire, Frederick B. Rudolph,1996-03-22 Biotechnology the manipulation of the basic building blocks of life is rapidly advancing in laboratories around the world It has become routine to refer to DNA fingerprints and genetically engineered foods Yet the how to of biotechnology is only the beginning For every report of new therapies or better ways to produce food there is a Jurassic Park scenario to remind us of the potential pitfalls Biotechnology raises serious issues for scientists and nonscientists alike Who will decide what is safe Who will have access to our personal genetic information What are the risks when advanced science becomes big business In Biotechnology experts from science law industry and government explore a cross section of emerging issues This book offers straightforward explanations of basic science and provides insight into the serious social questions raised by these findings The discussions explore five key areas The state of the art in biotechnology including an overview of the genetic revolution the development of recombinant DNA technology and the possibilities for applying the new techniques Potential benefits to medicine and the environment including gene therapy the emerging area of tissue engineering and biomaterials and the development of therapeutic proteins Issues in technology transfer focusing on the sometimes controversial relationship between university research centers and industry Ethics behavior and values exploring the ethical issues that surround basic research and applications of new technology with a discussion of scientific misconduct and a penetrating look at the social impact of genetic discoveries Government s role including a comparison of U S European and Japanese policies on pharmaceutical and biotechnology development Biotechnology is here to stay and this volume adds

immeasurably to understanding its multiple aspects and far reaching implications This book will be of interest to scientists and industry leaders involved in biotechnology issues and it will be welcomed by the concerned lay reader Frederick B Rudolph Ph D is a professor of biochemistry and cell biology at Rice University and is executive director of the Institute of Biosciences and Bioengineering Larry V McIntire Ph D is the E D Butcher Professor of Chemical and Biomedical Engineering at Rice University and is chair of the Institute of Biosciences and Bioengineering

Genetic Engineering Röbbbe Wünschiers,2021-07-05 This essential should serve as an introduction for a contemporary public discussion on genetic engineering Genetic engineering affects us all in many areas and we must dare to think more colorful and further In fact the complete genetic material of viruses and bacteria can already be chemically produced and brought to life With genetic surgery medicine is at a crossroads do we want to treat hereditary diseases or repair them genetically And the analysis of thousands of human genetic material reveals information that is related to complex diseases but also to characteristics such as intelligence How should we use this knowledge The question is hardly whether we want genetic engineering but rather how we use it This Springer essential is a translation of the original German 1st edition essentials Gentechnik by Rbbe W nschiers published by The Editor s if applicable and The Author s under exclusive license to Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2019 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
