Comparison of Behind-the-lens Meter Readings and Incident Light Meter Readings in Producing 35mm Color Slides for Technical Training Classes
Edgar A. Smith,1967 The study reported here relates to the possibility that behind the lens meters in 35mm cameras might facilitate the taking of colored slides by simplifying the technique for determining exposure A series of test slides representing various types of slides used in technical training classes briefings and presentations was made and evaluated These pictures included indoor shots of charts graphs newspaper clippings colored posters and live subjects The data indicate that exposure estimates obtained from behind the lens meters vary significantly from those obtained from incident light meters In approximately one half of the 48 cases compared the difference was at least one f stop The difference was not systematic but varied in both degree and direction When viewing the slides in pairs both a group of 37 university students and a group of 17 adult members of a photography club exhibited a strong tendency to find the slide based on the incident light meter to be more acceptable than the slide based on the behind the lens meter Author *HWM* ,2008-01 Singapore s leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews

MotorBoating ,2009-07 **NASA Tech Briefs** ,1999 **Origin and Early Evolution of the Metazoa** Jere H.

Lipps, Philip W. Signor, 2013-11-21 Several years ago we realized that the most prominent ideas that had been expressed about the origin and early evolution of the Metazoa seemed to have been developed chiefly by zoologists using evidence from modern species without reference to the fossil record Paleontologists had in fact put forth their own ideas but the zoological and the paleontological evidence were about the problem seldom considered together especially by zoologists We believed that the paleontological documentation of the first Metazoa was too scattered too obscure to Western readers and much of it too recent to have been readily available to our colleagues in zoology Whether or not that was entirely true we thought that a single volume reviewing the fossil record of the earliest Metazoa would be useful to many in both paleontology and zoology especially since so much new information has been developed in the last few years Some of this information has been summarized in general articles recently but an overview of most of the field does not exist We therefore organized this book in five parts so that the evidence could be placed in perspective and summarized and inferences made from it Part I introduces the previous hypotheses that have been proposed for the origin and early radiation of Metazoa Part II consists of two summary chapters that set the sedimentological geochemical and biological background to the known radiations of Metazoa
