Contouring Human Development Mukunda Mishra, Soumendu Chatterjee, 2020-05-11 This book acquaints readers with a range of techniques to help them effectively identify, record, map, analyze, and report on patterns in various dimensions of human development (HD) with spatial scales down to the village level. It is impossible to capture HD at the local and global scale with only a single index because differences in HD at the international scale are caused by general factors, whereas local scale differences are influenced by specific factors. This book offers a variety of methods for scientifically mapping HD at any spatial scale. It covers how to rationally select variables, how to test the models, how to validate the results, and how to analyze them. For this purpose, it employs a case study on an Indian district. The socio-economic factors regulating the patterns of HD are now more complex than they were only a few decades ago, making it essential to incorporate newer models in order to successfully replicate the real-world situation. Accordingly, the book offers essential methodological tools and techniques for mapping HD. It sheds new light on a handful of statistical, multivariate analysis, and machine learning algorithms that are rarely used in the social sciences when dealing with HD, yet have sound mathematical and statistical bases. These techniques can be successfully used for predictive analysis in the earth, natural sciences, decision sciences, and management disciplines and are equally effective in terms of capturing, predicting, and projecting the composite HD landscape. This book will especially benefit two groups of readers: firstly, HD practitioners who want to find out why some areas are doing better than others by exploring the complex interactions of spatially linked variables with different HD parameters; and secondly, practitioners in other branches of the social sciences who are not concerned with HD but are looking for hands-on training with techniques they can apply in their respective field of spatial investigations.
