Offences and Defences is an outstanding collection of eleven of John Gardner's previously published papers in the philosophy of criminal law. I briefly examine his views on five central issues: his claims about basic responsibility and whether it should be construed as relational; his positions on agent neutrality; his arguments about whether moral and criminal wrongs are typically strict; his thoughts about the structure of defences, and, finally, what his account of rape reveals about the content of the harm principle. Criminal Justice Procedure gives clear guidance on the most common questions faced by today's law enforcement, offering fresh look at 21st century pre-trial protocol. Unlike other case books, this newly revised edition eschews legal theory in favor of the practical know-how needed to not to parse, but apply criminal law. Emphasis has been placed on just exactly how practitioners should conduct hot-button procedures such as airport and border searches. Moreover, the book also addresses the often dire implications of deviating from proper practice - how a false step can translate into a violati. Baier reveals how over centuries the federal government slowly preempted the states' authority over managing their resident wildlife. In doing so, he educates elected officials, wildlife students, and environmentalists in the precedents that led to the current state of wildlife management, and how a constructive environment can be fostered at all levels of government to improve our nation's wildlife and biodiversity. An essential text covering the key rules of evidence in criminal matters, as well their interpretations and applications. Comprehensive without being encyclopedic, this text includes many of the engaging features that popularized Gardner and Anderson's best-

selling text CRIMINAL LAW. "This book ... is a descendant of my eponymous Quain Lectures, delivered at University College London in 2014"--Preface. Tort Law: Cases and Materials offers a fresh approach to the study of tort law. It is the essential companion to Green and Gardner's Tort Law textbook. Covering all aspects of the tort law curriculum, the inclusion of extracts from key cases, statutes, newspaper reports and articles demonstrates the law in action. The clear and insightful commentary accompanying each extract explains the significance of each and provides students with an enhanced understanding of the material, ensuring they can respond with depth and analysis in their essay questions. Designed with decolonising the curriculum in mind, in addition to the standard and oft-cited materials, the expert authors have selected alternative voices, including feminist approaches, socio-legal perspectives and comparative material from multiple international jurisdictions. This provides students with a thorough and wide-ranging examination of tort law. The United Nations Convention on the Rights of the Child 1989 is one of the most highly ratified human rights treaties in the world, with 192 states currently signed up to it. Article Twelve is fundamental to the Convention and states that all children capable of forming views have the right to express those

views, and recognises that all children have the right to be heard in any judicial and administrative proceedings affecting them. This book explores the historical and theoretical background to Article Twelve, and examines the various models of participation which have been created to facilitate a better understanding of this provision. Aisling Parkes analyzes the extent to which Article Twelve has been implemented under international law, and in domestic law, as well as setting-out recommendations for the most effective ways of implementing Article Twelve in all areas of children's lives.

In the tradition of Malcolm Gladwell, Gardner explores a new way of thinking about the decisions we make. We are the safest and healthiest human beings who ever lived, and yet irrational fear is growing, with deadly consequences — such as the 1,595 Americans killed when they made the mistake of switching from planes to cars after September 11. In part, this irrationality is caused by those — politicians, activists, and the media — who promote fear for their own gain. Culture also matters. But a more fundamental cause is human psychology. Working with risk science pioneer Paul Slovic, author Dan Gardner sets out to explain in a compulsively readable fashion just what that statement above means as to how we make decisions and run our lives. We learn that the brain has not one but two systems to analyze risk. One is primitive, unconscious, and intuitive. The other is conscious and rational. The two systems often agree, but occasionally they come to very different conclusions. When that

happens, we can find ourselves worrying about what the statistics tell us is a trivial threat — terrorism, child abduction, cancer caused by chemical pollution — or shrugging off serious risks like obesity and smoking. Gladwell told us about “the black box” of our brains; Gardner takes us inside, helping us to understand how to deconstruct the information we’re bombarded with and respond more logically and adaptively to our world. Risk is cutting-edge reading. Torts and other Wrongs is a collection of eleven of the author's essays on the theory of the law of torts and its place in the law more generally. Two new essays accompany nine previously published pieces, a number of which are already established classics of theoretical writing on private law. Together they range across the distinction between torts and other wrongs, the moral significance of outcomes, the nature and role of corrective and distributive justice, the justification of strict liability, the nature of the reasonable person standard, and the role of public policy in tort adjudication. Though focussed on the law of torts, the wide-ranging analysis in each chapter will speak to theorists of private law more generally. A Lincoln Legacy: The History of the U.S. District Court for the Western District of Michigan by David Gardner Chardavoyne with Hugh W. Brenneman, Jr. provides the first and only comprehensive examination of the history of the United States federal courts in the Western District of Michigan. The federal courts were established by the U.S. Constitution to adjudicate disputes involving federal laws, disputes between litigants from different states involving

state and federal laws, and to punish violations of criminal laws passed by Congress. During the Civil War, Abraham Lincoln signed legislation creating two federal districts in the state of Michigan: the Eastern and Western Districts--the latter of which is headquartered in Grand Rapids and which now encompasses the western half of the Lower Peninsula and all of the Upper Peninsula. With the rapid expansion of legislation passed by Congress, the increasing mobility of society, and the growth of interstate commerce, the federal courts have assumed an important and sometimes dominant role in major litigation today. In *A Lincoln Legacy*, Chardavoyne tracks the history of these courts over eleven chapters, from their creation by the Northwest Ordinance of 1787 to 2020. He discusses the changes in society that drove the evolving federal litigation and some significant cases heard in the Western District. Additionally, fifteen appendices are included in the book, listing of all the federal circuit and district judges in the Western District; commissioners; magistrate judges and bankruptcy judges; U.S. Attorneys; clerks of the courts; U.S. Marshals; and more. Chardavoyne also identifies auxiliary offices and organizations revolving around the federal court that play a major role in its activities (e.g., the U.S. Attorney's Office, the Federal Public Defender's Office, the Federal Bar Association, etc.). *A Lincoln Legacy* provides a thorough examination of the history of the federal courts of Western Michigan. It will appeal to those learning and practicing law, as well as those with an interest in Michigan history.
