The production support function actually consists of three different functions (six different modes), which are the output control function, operation measuring function and bobbin counter function. Each with its own production support effect. An appropriate function (mode) can be selected as required. The parameter setting can be done on the panel located on the top of the sewing machine, thereby helping reduce operator fatigue during setup changing.

Three different functions

(Six different modes)

Output control function

- Target No. of products display mode
Under the target No. of products display mode, the target number of products and the actual number of products produced according to the work hours are displayed.

- Target-actual result difference display mode
In the under target-actual result difference display mode, the difference between the target number of products and the actual number of products produced is displayed.

Since operators are able to work while checking their actual number of products on the panel at all times, they can strengthen their sense of purpose of achieving the target, thereby increasing productivity. Operators can visually check the progress of their work in real time, leading to the early detection of any problems and the execution of early corrective measures.

Operation measuring function

- Sewing machine availability display mode
Under the sewing machine availability display mode, the average sewing machine availability in the previous cycle and the current cycle is displayed.

- Pitch time display mode
Under the pitch time display mode, the average process machining time in the previous cycle and the current cycle is displayed.

- Average speed of stitch display mode
Under the average speed of stitch display mode, the accumulated speed of stitch in the previous cycle and the current cycle is displayed.

Since the sewing machine operation status, pitch time (process machining time), can be automatically measured, process analysis, line arrangement and confirmation of facility efficiency can be obtained with ease. As a result, the man-hours required for production control are reduced.

Bobbin counter function

- Bobbin counter display mode
The operator is notified that the bobbin needs to be replaced before the bobbin thread runs out.

Since the operator is notified of the time to replace the bobbin, the operator is no longer required to carry out the re-sewing of seams sewn without bobbin thread, thereby increasing working efficiency. In addition, the operator carries out his/her work under a stress-free environment without worrying about needle-hole damage to the material, which is likely to be made when sewing without bobbin thread.

four essays dealing with literary topics Inherent in each narrative are both temporal and spatial implications because a literary text testifies of a certain time it is from and about a certain period as well as about a certain space even if virtual A particularly strong feature of these papers is that they envision space and time as complementary parameters of experience and not as conceptual opposites following the transfer of perspective through the whole century Departing from the late nineteenth century England s and Croatia s fictive spaces Ch 5 the topic moves via the American Southern Gothic focusing on Faulkner from the thirties to the early sixties Ch 6 via the post WWII perspectives on history probing the postmodern context of temporality Ch 7 to finally reach the contemporary era of post 9 11 space time Ch 8 The voyage from chapter five to eight is thus a journey through space and time that allows for some answers to the nature of reality of a variety of space times as conceived by both the authors of these essays as well as by the authors that these essays discuss The main goal of the editors has been to bring together different scientific traditions which can contribute complementary concerns and methodologies to the issues under exam from the literary and descriptive via the diachronic and typological explorations all the way to cognitive linguistic analyses bordering psycholinguistics and neuroscience One of the strengths of this volume thus lies in the diversity of perspectives articulated within it where the agreements but also the controversies and divergences demonstrate constant changes in society which in turn shapes our views of space time reality All this also suggests that science and literature are not above or apart from their culture but embedded within it and that there exists a strong relativistic interrelation between spatio temporal reality and culture The only hope to objectively envisage any if not all of the above is by learning how to move our thought through space time or to put it in simpler terms how to shift perspectives
