Daylight Saving Time (DST)

Daylight Saving Time (summer time) advances the time setting by one hour from Standard Time. Remember that not all countries or even local areas use Daylight Saving Time.

To change the Daylight Saving Time (summer time) setting

- In the Stopwatch Mode, hold **(C)** for about three seconds until the currently selected city code flashes in the right digital area. This is the setting mode.
 - The digital display shows the DST setting screen.
 - Use **(L)** to toggle the DST setting on (on) and off (OFF).
 - The default DST setting is off (OFF).
- When the setting you want to selected, press **(C)** to exit the setting mode.
- The DST indicator appears to indicate that Daylight Saving Time is turned on.

E-18

Stopwatch

- You can use the stopwatch to measure elapsed time, lap time and split times. If you specify a distance value, the stopwatch also will calculate and display average.
- The digital display range of the stopwatch is 99 hours, 59 minutes, 59 (99) seconds. If the stopwatch continues to run until you stop it, it reaches the above time, it will restart the time measurement from zero.
 - The stopwatch operation continues even if you exit the Stopwatch Mode. If you exit the Stopwatch Mode while a stopwatch operation is in progress, the segments along the top of the right digital area (right) start displaying segments will indicate the seconds of the current time. Each segment represents one second. This is to let you know that a stopwatch operation is in progress.
 - All of the operations in this section are performed in the Stopwatch Mode, which you enter by pressing **(C)** (page E-17).

E-19

To specify a distance value

- In the Stopwatch Mode, make sure the stopwatch is stopped and reset to all zeros.
- If you need to reset the stopwatch to all zeros, press **(C)**.
- Hold down **(C)** for about three seconds until the current distance value setting flashes in the left digital area.
- Press **(C)** to enter the flashing distance value on the left side and right side of the distance value display screen.
- While a distance value is flashing, use **(L)** and **(R)** to change it.
- You can specify a distance value in the range of 0.1 to 99.9.
- After specifying the distance value you want, press **(C)** to exit the setting mode.

E-20

Time Measurement

You need to specify either lap time (page E-20) or split time (page E-20) measurement before you start a stopwatch (page E-17) operation.

- If you want to measure total elapsed time, select split time measurement.

To specify lap time or split time readings

- In the Stopwatch Mode, make sure the stopwatch is stopped and reset to all zeros.
- While zero (0) is set (lap time) or 0.0 (split time) shows in the left digital area.
- If you need to reset the stopwatch to 0.0, press **(C)**.
- You can toggle between LAP (lap time) and SPL (split time) by pressing **(C)**.

E-21

- The day of the week is displayed automatically in accordance with the date (year, month, and day) settings.

E-21

12-hour and 24-hour timekeeping

- With the 12-hour format, the PM indicator appears in the left digital area for times in the range of noon to 11:59 p.m., and no indicator appears for times in the range of midnight to 11:59 a.m.
- With the 24-hour format, times are displayed in the range of 0:00 to 23:59, without the PM indicator.
- The 12-hour/24-hour timekeeping format you select in the Timekeeping Mode is applied in all other modes.

E-22

Important

- Check to make sure that the speed hand is not moving before you perform any Stopwatch Mode button operation.

Specifying a Distance Value

- You can use the procedure below to specify a distance value, if you want, if you operate in the Stopwatch Mode. The watch will calculate and indicate speed for certain stopwatch operations.
- The distance unit is kilometers (kilometers, unit), or any other distance unit you want.
 - Specifying a distance value of 0.0, for example, can mean 0.0 kilometers or 0.0 miles.
 - No speed calculation is performed when 0.0 is specified as the current distance value.
 - For lap time readings, you can specify either the lap distance (when all the laps are the same distance) or the total race distance.
 - For split time readings, you can specify the total race distance only. Though the watch will indicate a speed each time you take a split reading, they will be based on the total race distance, and so they will not indicate actual intermediate split speeds.

E-23

How speed is indicated

- While an elapsed time measurement operation is being performed in the Stopwatch Mode, the watch will indicate a speed value, which is calculated based on the distance you specified and the elapsed time. The speed value is indicated on the watch face.
- Speed hand: Up to 130.
- Right side display segments: 100 and 1000 indicator points to 1000 located to the right of the right side display segments when the speed value in the right side display segments is 1000 (1000).
- The speed hand indicates speed values less than 100.
- Speed can be indicated from 0 to 1300. OVER is indicated by the speed hand when the speed exceeds 1300.

Example
When the speed value is 1.740,
Speed hand: Indicates 40.
Right side display segments: Indicate 100.
1000 indicator: Displayed

E-24

Elapsed Time Measurement

Use the following procedure to measure elapsed time, without taking lap time or split time readings.

To perform elapsed time measurement

Select split time (SPL) measurement and then perform the following button operations:

- Start → (C) Stop → (C) Reset
- If you have a distance value (page E-19) specified for the current elapsed time measurement, the right side display segments will indicate the speed when you press **(C)** to stop the elapsed time operation.
- After pressing **(C)** to stop an elapsed time operation, you could press **(C)** again to restart from the point where you left off.

Inorganic Chemistry in Tables Nataliya Turova,2011-07-28 The present supplement to Inorganic Chemistry courses is developed in the form of reference schemes presenting the information on one or several related element derivatives and their mutual transformations within one double sided sheet The compounds are placed from left to right corresponding to the increase in the formal oxidation number of the element considered For each distinct oxidation state the upper position in the column is occupied by an oxide its hydrated forms followed then by basic and oxo and normal salts The position of each compound in this scheme is unambiguously determined in this approach by the central atom oxidation number in the horizontal direction and the nature of ligand in the vertical one which simplifies considerably the search for necessary

information The mutual transformations are displayed by arrows accompanied by the reagents or other factors responsible for the reaction red arrows mean oxidation green arrows mean reduction black arrows if the oxidation number is not changed Modern training programs require the mastering of a tremendous amount of data The present tables should serve as a useful addition to textbooks and lectures *Thermal Spray Fundamentals* Pierre L.
