Problem 2A**AVERAGE VELOCITY AND DISPLACEMENT****PROBLEM**

The fastest fish, the sailfish, can swim 1.2×10^2 km/h. Suppose you have a friend who lives on an island 16 km away from the shore. If you send a message using a sailfish as a messenger, how long will it take for the message to reach your friend?

SOLUTION

Given: $v_{\text{avg}} = 1.2 \times 10^2$ km/h
 $\Delta x = 16$ km

Unknown: $\Delta t = ?$

Use the definition of average speed to find Δt .

$$v_{\text{avg}} = \frac{\Delta x}{\Delta t}$$

Rearrange the equation to calculate Δt .

$$\Delta t = \frac{\Delta x}{v_{\text{avg}}}$$

$$\Delta t = \frac{16 \text{ km}}{\left(1.2 \times 10^2 \frac{\text{km}}{\text{h}}\right) \left(\frac{1 \text{ h}}{60 \text{ min}}\right)} = \frac{16 \text{ km}}{2.0 \text{ km/min}}$$

$$= \boxed{8.0 \text{ min}}$$

ADDITIONAL PRACTICE

- The Sears Tower in Chicago is 443 m tall. Joe wants to set the world's stair climbing record and runs all the way to the roof of the tower. If Joe's average upward speed is 0.60 m/s, how long will it take Joe to climb from street level to the roof of the Sears Tower?
- An ostrich can run at speeds of up to 72 km/h. How long will it take an ostrich to run 1.5 km at this top speed?
- A cheetah is known to be the fastest mammal on Earth, at least for short runs. Cheetahs have been observed running a distance of 5.50×10^2 m with an average speed of 1.00×10^2 km/h.
 - How long would it take a cheetah to cover this distance at this speed?
 - Suppose the average speed of the cheetah were just 85.0 km/h. What distance would the cheetah cover during the same time interval calculated in (a)?

Physics for Scientists and Engineers Raymond Serway,John Jewett,2013-01-01 As a market leader PHYSICS FOR SCIENTISTS AND ENGINEERS is one of the most powerful brands in the physics market While preserving concise language state of the art educational pedagogy and top notch worked examples the Ninth Edition highlights the Analysis Model approach to problem solving including brand new Analysis Model Tutorials written by text co author John Jewett and available in Enhanced WebAssign The Analysis Model approach lays out a standard set of situations that appear in most physics problems and serves as a bridge to help students identify the correct fundamental principle and then the equation to utilize in solving that problem The unified art program and the carefully thought out problem sets also enhance the thoughtful instruction for which Raymond A Serway and John W Jewett Jr earned their reputations The Ninth Edition of PHYSICS FOR SCIENTISTS AND ENGINEERS continues to be accompanied by Enhanced WebAssign in the most integrated text technology offering available today Important Notice Media content referenced within the product description or the product text may not be available in the ebook version *Classical Dynamics of Particles and Systems* Jerry B.

Marion,2013-10-22 *Classical Dynamics of Particles and Systems* presents a modern and reasonably complete account of the classical mechanics of particles systems of particles and rigid bodies for physics students at the advanced undergraduate level The book aims to present a modern treatment of classical mechanical systems in such a way that the transition to the quantum theory of physics can be made with the least possible difficulty to acquaint the student with new mathematical

techniques and provide sufficient practice in solving problems and to impart to the student some degree of sophistication in handling both the formalism of the theory and the operational technique of problem solving Vector methods are developed in the first two chapters and are used throughout the book Other chapters cover the fundamentals of Newtonian mechanics the special theory of relativity gravitational attraction and potentials oscillatory motion Lagrangian and Hamiltonian dynamics central force motion two particle collisions and the wave equation

Linear Algebra with Applications Jeffrey Holt, 2016-12-15 Holt's Linear Algebra with Applications Second Edition blends computational and conceptual topics throughout to prepare students for the rigors of conceptual thinking in an abstract setting The early treatment of conceptual topics in the context of Euclidean space gives students more time and a familiar setting in which to absorb them This organization also makes it possible to treat eigenvalues and eigenvectors earlier than in most texts Abstract vector spaces are introduced later once students have developed a solid conceptual foundation Concepts and topics are frequently accompanied by applications to provide context and motivation Because many students learn by example Linear Algebra with Applications provides a large number of representative examples over and above those used to introduce topics The text also has over 2500 exercises covering computational and conceptual topics over a range of difficulty levels

Advanced Calculus (Revised Edition) Lynn Harold Loomis, Shlomo Zvi Sternberg, 2014-02-26 An authorised reissue of the long out of print classic textbook Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades This book is based on an honors course in advanced calculus that the authors gave in the 1960's The foundational material presented in the unstarred sections of Chapters 1 through 11 was normally covered but different applications of this basic material were stressed from year to year and the book therefore contains more material than was covered in any one year It can accordingly be used with omissions as a text for a year's course in advanced calculus or as a text for a three semester introduction to analysis The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view together with some acquaintance with linear algebra The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication As possible introductory texts we mention Differential and Integral Calculus by R Courant Calculus by T Apostol Calculus by M Spivak and Pure Mathematics by G Hardy The reader should also have some experience

with partial derivatives In overall plan the book divides roughly into a first half which develops the calculus principally the differential calculus in the setting of normed vector spaces and a second half which deals with the calculus of differentiable manifolds

Advanced Physics for You Keith Johnson,Simmons Hewett,Sue Holt,John Miller,2000 Designed to be motivating to the student this title includes features that are suitable for individual learning It covers the AS Level and core topics of almost all A2 specifications
