

Laboratory Activity #1 — Student Laboratory Packet**Relationships and Biodiversity***A Laboratory Activity for the Living Environment***Introduction**

Botana curus is a valuable plant because it produces Curol, a compound used for treating certain kinds of cancer. Curol cannot be produced in the laboratory. *Botana curus* grows very slowly and is on the endangered species list, so its ability to provide Curol in large quantities is limited.

Species that are more closely related to *Botana curus* are more likely to produce the important substance Curol. Three similar plant species that are plentiful (X, Y, and Z) may be related to *Botana curus*. You will work as a researcher to:

- gather structural and molecular evidence to determine which plant species is most closely related to the hypothetical species, *Botana curus*
- use this evidence to decide which plant species is most likely to serve as a source of the important substance Curol

Safety

- You will need to wear goggles while conducting Tests 4 and 5.
- Do not eat or drink anything in the laboratory while doing this laboratory activity.

Important Note: Record all of your data and answers on these laboratory sheets. You will need to keep them for review before the Regents Examination. Later, you will need to transfer your answers to a separate Student Answer Packet. Your teacher will use the packet in grading your work, and the school will retain it as evidence of your completion of the laboratory requirement for the Living Environment Regents Examination.

Structural Evidence for Relationships

Perform the following tests and record your observations in Table 1 on page 8 of this packet. Use a hand lens or microscope as needed.

Test 1-Structural Characteristics of Plants

- Do not remove the plant samples from the plastic bags/cards.
- Compare the structural characteristics of the plant samples. Record your observations in Table 1 (see page 8).

Test 2-Structural Characteristics of Seeds

- Do not remove the seed samples from the plastic bags/cards.
- Compare the structural characteristics of the seed samples. Record your observations in Table 1.

"Relationships and Biodiversity" is a laboratory activity produced by the State Education Department for use in fulfilling part of the laboratory requirement for the Regents Examination in Living Environment. Reproducing any part of this laboratory activity by other than New York State school personnel is illegal.

Biodiversity and Ecosystem Functioning Michel Loreau, Shahid Naeem, Pablo Inchausti, 2002 Increasing domination of ecosystems by humans is steadily transforming them into depauperate systems How will this loss of biodiversity affect the functioning and stability of natural and managed ecosystems This work provides comprehensive coverage of empirical and theoretical research

A Framework for K-12 Science Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards, 2012-02-28 Science engineering and technology permeate nearly every facet of modern life and hold the key to solving many of humanity s most pressing current and future challenges The United States position in the global economy is declining in part because U S workers lack fundamental knowledge in these fields To address the critical issues of U S competitiveness and to better prepare the workforce A Framework for K 12 Science Education proposes a new approach to K 12 science education that will capture students interest and provide them with the necessary foundational knowledge in the field A Framework for K 12 Science Education outlines a broad set of expectations for students in science and engineering in grades K 12 These expectations will inform the development of new standards for K 12 science education and subsequently revisions to curriculum instruction assessment and professional development for educators This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built These three dimensions are crosscutting

concepts that unify the study of science through their common application across science and engineering scientific and engineering practices and disciplinary core ideas in the physical sciences life sciences and earth and space sciences and for engineering technology and the applications of science The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science related issues be careful consumers of scientific and technical information and enter the careers of their choice A Framework for K 12 Science Education is the first step in a process that can inform state level decisions and achieve a research grounded basis for improving science instruction and learning across the country The book will guide standards developers teachers curriculum designers assessment developers state and district science administrators and educators who teach science in informal environments

Perspectives on Biodiversity National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Noneconomic and Economic Value of Biodiversity, 1999-10-01 Resource management decisions especially in the area of protecting and maintaining biodiversity are usually incremental limited in time by the ability to forecast conditions and human needs and the result of tradeoffs between conservation and other management goals The individual decisions may not have a major effect but can have a cumulative major effect Perspectives on Biodiversity reviews current understanding of the value of biodiversity and the methods that are useful in assessing that value in particular circumstances It recommends and details a list of components including diversity of species genetic variability within and among species distribution of species across the ecosystem the aesthetic satisfaction derived from diversity and the duty to preserve and protect biodiversity The book also recommends that more information about the role of biodiversity in sustaining natural resources be gathered and summarized in ways useful to managers Acknowledging that decisions about biodiversity are necessarily qualitative and change over time because of the nonmarket nature of so many of the values the committee recommends periodic reviews of management decisions

Opportunities in Biology National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Board on Biology, Committee on Research Opportunities in Biology, 1989-01-01 Biology has entered an era in which interdisciplinary cooperation is at an all time high practical applications follow basic discoveries more quickly than ever before and new technologies recombinant DNA scanning tunneling microscopes and more are revolutionizing the way science is conducted The potential for scientific breakthroughs with significant implications for society has never been greater Opportunities in Biology reports on the state of the new biology taking a detailed look at the disciplines of biology examining the advances made in medicine agriculture and other fields and pointing out promising research opportunities Authored by an expert panel representing a variety of viewpoints this volume also offers recommendations on how to meet the infrastructure needs for funding effective information systems and other support of future biology research Exploring what has been accomplished and what is on the horizon Opportunities in Biology is an indispensable resource for students teachers and researchers in all subdisciplines of

biology as well as for research administrators and those in funding agencies

The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations Pushpam Kumar, 2012-12-20 Human well being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well being but also seriously undermines the sustainability of the economic system. It is against this background that TEEB, The Economics of Ecosystems and Biodiversity project, was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity, and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade.

Science in Action 9, 2002 Conservation Biogeography Richard J. Ladle, Robert J. Whittaker, 2011-01-11 CONSERVATION BIOGEOGRAPHY The Earth's ecosystems are in the midst of an unprecedented period of change as a result of human action. Many habitats have been completely destroyed or divided into tiny fragments; others have been transformed through the introduction of new species or the extinction of native plants and animals, while anthropogenic climate change now threatens to completely redraw the geographic map of life on this planet. The urgent need to understand and prescribe solutions to this complicated and interlinked set of pressing conservation issues has led to the transformation of the venerable academic discipline of biogeography, the study of the geographic distribution of animals and plants. The newly emerged sub-discipline of conservation biogeography uses the conceptual tools and methods of biogeography to address real world conservation problems and to provide predictions about the fate of key species and ecosystems over the next century. This book provides the first comprehensive review of the field in a series of closely interlinked chapters addressing the central issues within this exciting and important subject.

Laudato Si Pope Francis, 2015-07-18 In the heart of this world, the Lord of life who loves us so much is always present. He does not abandon us; he does not leave us alone, for he has united himself definitively to our earth, and his love constantly impels us to find new ways forward. Praise be to him. Pope Francis, Laudato Si. In his second encyclical, Laudato Si, On the Care of Our Common Home, Pope Francis draws all Christians into a dialogue with every person on the planet about our common home. We as human beings are united by the concern for our planet and every living thing that dwells on it, especially the poorest and most vulnerable. Pope Francis' letter joins the body of the Church's social and moral teaching, draws on the best scientific research, providing the foundation for the ethical and spiritual itinerary that follows. Laudato Si outlines the current state of

our common home The Gospel message as seen through creation The human causes of the ecological crisis Ecology and the common good Pope Francis call to action for each of us Our Sunday Visitor has included discussion questions making it perfect for individual or group study leading all Catholics and Christians into a deeper understanding of the importance of this teaching **Biology** ANONIMO, Barrons Educational Series, 2001-04-20 [The Living Environment: Prentice Hall Br](#) John Bartsch, 2009 **The Origin of Species by Means of Natural Selection** Charles Darwin, 1888 **Silent Spring** Rachel Carson, 2002 The essential cornerstone book of modern environmentalism is now offered in a handsome 40th anniversary edition which features a new Introduction by activist Terry Tempest Williams and a new Afterword by Carson biographer Linda Lear
