[Academic Library Services for Graduate Students](#) May 25 2023 Providing practical and theoretical chapters on academic library services for graduate students, this volume helps information professionals support this often-overlooked campus population to address their multiple roles and identities as students and as future faculty members or professionals. As more and more students attend graduate programs, many higher education institutions have established professional development programs to help graduate students learn the wide range of skills needed to be successful as both students and as future professionals or academics. To presuppose that graduate students are proficient library users is a mistake. Graduate

students need and want help, and many libraries are now offering specialized services for this diverse population. Contributors to this edited volume provide case studies and practical advice on academic library services for graduate students that support their multiple roles on campus and address the complex social and emotional issues related to their other roles as parents, working adults, caretakers, and more. As academic libraries shift from functioning primarily as collections repositories to collaborating as key players in discovery and knowledge creation, value-added services for graduate students are even more central to libraries' changing missions. This book makes an important contribution to the ongoing professional conversation and is a useful tool for librarians who want to better support graduate students at their institutions.

**The Professor Is In** Jan 01 2024 The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: -When, where, and what to publish -Writing a foolproof grant application -Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right *The Professor Is In* addresses all of these issues, and many more.

[A Handbook for Supporting Today's Graduate Students](#) Oct 06 2021 Despite continued growth in enrollments, graduate program attrition rates are of great concern to academic program coordinators. It is estimated that only 40 to 50 percent of students who begin Ph.D. programs complete their degrees. This book describes programs, initiatives, and interventions that lead to overall student retention and success. Written for graduate school administrators, student affairs

professionals, and faculty, this book offers ways to better support today's graduate student population, addresses the needs of today's changing student demography and considers the challenges today's graduate students face inside and outside of the classroom. The opening section highlights the shifting demographics and contextual factors shaping graduate education over the past 20 years, while the second describes institutional practices to develop the requisite academic and professional development necessary to succeed in master's and doctoral programs. In conclusion, the editors curate a conversation about different ways institutions can support graduate students beyond the classroom.

D.s and thus new faculty for the academic sector, abound. Among the policies proposed to prevent such shortages is increased federal support for graduate students. Lost in the policy debate, however, has been concern for the possibility that increased federal support might induce academic institutions to redirect their own internal resources in a way that at least partially frustrates the intent of the policy change. Our paper presents an analysis of this issue using institutionally-based data for science and engineering fields. We find that doctorate-producing universities do respond to changes in external support for graduate students by altering the number of students they support on institutional funds. While adjustments to changes in external support levels appear to be quite rapid, the magnitude of these responses are quite small. On average, an increase of 100 in the number of students supported by external funds is estimated to reduce the number supported on institutional funds by 22 to 23. We also find that the magnitude of the response varies across fields, that within the science and engineering fields there is some fungibility of external support across fields, and that changes in external support influence the distribution of internal support by type of support (fellowship, research assistantship, and teaching assistantship).

**Learning from the Lived Experiences of Graduate Student Writers** Jun 13 2022 Learning from the Lived Experiences of Graduate Student Writers is a timely resource for understanding and resolving some of the issues graduate students face, particularly as higher education begins to pay more critical attention to graduate student success. Offering diverse approaches for assisting this demographic, the book bridges the gap between theory and practice through structured examination of graduate students' narratives about their development as writers, as well as researched approaches for enabling these students to cultivate their craft. The first half of the book showcases the voices of graduate student writers themselves, who

describe their experiences with graduate school literacy through various social issues like mentorship, access, writing in communities, and belonging in academic programs. Their narratives illuminate how systemic issues significantly affect graduate students from historically oppressed groups. The second half accompanies these stories with proposed solutions informed by empirical findings that provide evidence for new practices and programming for graduate student writers. Learning from the Lived Experiences of Graduate Student Writers values student experience as an integral part of designing approaches that promote epistemic justice. This text provides a fresh, comprehensive, and essential perspective on graduate writing and communication support that will be useful to administrators and faculty across a range of disciplines and institutional contexts. **Project Management for Research** Mar 03 2024 Graduate research is a complicated process, which many undergraduate students aspire to undertake. The complexity of the process can lead to failures for even the most brilliant students. Success at the graduate research level requires not only a high level of intellectual ability but also a high level of project management skills. Unfortunately, many graduate students have trouble planning and implementing their research. Project Management for Research: A Guide for Graduate Students reflects the needs of today's graduate students. All graduate students need mentoring and management guidance that has little to do with their actual classroom performance. Graduate students do a better job with their research programs if a self-paced guide is available to them. This book provides such a guide. It covers topics ranging from how to select an appropriate research problem to how to schedule and execute research tasks. The authors take a project management approach to planning and implementing graduate research in any discipline. They use a conversational tone to address the individual graduate student. This book helps graduate students and advisors answer most of the basic questions of conducting and presenting graduate research, thereby alleviating frustration on the part of both student and advisor. It presents specific guidelines and examples throughout the text along with more detailed examples in reader-friendly appendices at the end. By being more organized and prepared to handle basic research management functions, graduate students, along with their advisors, will have more time for actual intellectual mentoring and knowledge transfer, resulting in a more rewarding research experience.

*Graduate School and Beyond* Aug 28 2023 Knowledge is power. Simply stated, this book provides graduate students-traditional and returning

Online courses, distance learning, social networking, and the effects of the internet on graduate education are special features of this book emerging from the author's 35 years of experience in leading edge educational settings.

*Stories of Becoming* Mar 23 2023 Based on findings from a multiyear, nationwide study of new faculty in the field of rhetoric and composition, *Stories of Becoming* provides graduate students—and those who train them—with specific strategies for preparing for a career in the professoriate. Through the use of stories, the authors invite readers to experience their collaborative research processes for conducting a nationwide survey, qualitative interviews, and textual analysis of professional documents. Using data from the study, the authors offer six specific strategies—including how to manage time, how to create a work/life balance, and how to collaborate with others—that readers can use to prepare for the composition and rhetoric job market and to begin their careers as full-time faculty members. Readers will learn about the possible responsibilities they may take on as new faculty, particularly those that go beyond teaching, research, service, and administration to include navigating the politics of higher education and negotiating professional identity construction. And they will also engage in activities and answer questions designed to deepen their understanding of the field and help them identify their own values and desired career trajectory. *Stories of Becoming* demystifies the professoriate, compares what current new faculty have to say of their job expectations with the realities that students might face when on the job, and brings to light the invisible, behind-the-scenes work done by new faculty. It will be invaluable to graduate students, those who teach graduate students, new faculty, and hiring administrators in composition and rhetoric.
