One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare. Rooted in the creative success of over 30 years of supermarket tabloid publishing, the Weekly World News has been the world's only reliable news source since 1979. The online hub www.weeklyworldnews.com is a leading entertainment news site. The Preventive Maintenance Monthly is an official publication of the Army, providing information for all soldiers assigned to combat and combat duties. The magazine covers issues concerning maintenance, maintenance procedures and supply problems. This is the fifth year we have been able to capture the research and development efforts related to the Generalized Intelligent Framework for Tutoring (GIFT) community which at the writing of these proceedings has well over 1000 users in over 65 countries. We are proud of what we have been able to accomplish with the help of our user community. These proceedings are intended to document the evolutions of GIFT as a tool for the authoring

of intelligent tutoring systems (ITSs) and the evaluation of adaptive instructional tools and methods. "Hard as it is to believe, one of the most significant stories of the post-9/11 age is also one of the least known-life at Gitmo, the detention facility for many of the world's worst terrorists. Few individuals are more qualified to tell this story than Montgomery Granger, a citizen soldier, family man, dedicated educator, and Army Reserve medical officer involved in one of the most intriguing military missions of our time. Saving Grace at Guantanamo Bay is about that historic experience, and it relates not only what it was like for Granger to live and work at Gitmo, but about the sacrifices made by him and his fellow Reservists serving around the world." Andrew Carroll, editor of the New York Times bestsellers War Letters and Behind the Lines Saving Grace at Guantanamo Bay, or "Gitmo: The Real Story," is a "good history of medical, security, and intelligence aspects of Gitmo; also, it will be valuable for anyone assigned to a Gitmo-like facility." Jason Wetzel, Field Historian, Office of Army Reserve History U.S. Army Reserve Captain Montgomery Granger found himself the ranking Army Medical Department officer in a joint military operation like no other before it - taking care of terrorists and murderers just months after the horrors of September 11, 2001. Granger and his fellow Reservists end up running the Joint Detainee Operations Group (JDOG) at Guantanamo Bay's infamous Camp X-Ray. In this moving memoir, Granger writes about his feelings of guilt, leaving his family and job back home, while in Guantanamo, he faces a myriad of torturous emotions and self-doubt, at once hating the inmates he is nonetheless duty bound to care for and protect. Through long distance love, and much heartache, Granger finds a way to keep his sanity and dignity. Saving Grace at Guantanamo Bay is his story. Over 12,000 total pages! The magazine of mobile warfare. Training Circular (TC) 3-09.81, "Field Artillery Manual Cannon Gunnery," sets forth the doctrine pertaining to the employment of artillery fires. It explains all aspects of the manual cannon gunnery problem and presents a practical application of the science of ballistics. It includes step-by-step instructions for manually solving the gunnery problem which can be applied within the framework of decisive action or unified land operations. It is applicable to any Army personnel at the battalion or battery responsible to delivered field artillery fires. The principal audience for ATP 3-09.42 is all members of the Profession of Arms. This includes field artillery Soldiers and combined arms chain of command field and company grade officers, middle-grade and senior noncommissioned officers (NCO), and battalion and squadron command groups and staffs. This manual also provides guidance for division and corps leaders and staffs in training for and employment of the BCT in decisive action. This publication may also be used by other Army organizations to assist in their planning for support of battalions. This manual builds on the collective knowledge and

experience gained through recent operations, numerous exercises, and the deliberate process of informed reasoning. It is rooted in time-tested principles and fundamentals, while accommodating new technologies and diverse threats to national security. Intelligent Unmanned Ground Vehicles describes the technology developed and the results obtained by the Carnegie Mellon Robotics Institute in the course of the DARPA Unmanned Ground Vehicle (UGV) project. The goal of this work was to equip off-road vehicles with computer-controlled, unmanned driving capabilities. The book describes contributions in the area of mobility for UGVs including: tools for assembling complex autonomous mobility systems; on-road and off-road navigation; sensing techniques; and route planning algorithms. In addition to basic mobility technology, the book covers a number of integrated systems demonstrated in the field in realistic scenarios. The approaches presented in this book can be applied to a wide range of mobile robotics applications, from automated passenger cars to planetary exploration, and construction and agricultural machines. Intelligent Unmanned Ground Vehicles shows the progress that was achieved during this program, from brittle specially-built robots operating under highly constrained conditions, to groups of modified commercial vehicles operating in tough environments. One measure of progress is how much of this technology is being used in other applications. For example, much of the work in road-following, architectures and obstacle detection has been the basis for the Automated Highway Systems (AHS) prototypes currently under development. AHS will lead to commercial prototypes within a few years. The cross-country technology is also being used in the development of planetary rovers with a projected launch date within a few years. The architectural tools built under this program have been used in numerous applications, from an automated harvester to an autonomous excavator. The results reported in this work provide tools for further research development leading to practical, reliable and economical mobile robots.
