MODULE 2 • THE STOCK MARKET

Lesson 2.2: Creating Inequalities in One Variable

Guided Practice 2.2

Example 1

Juan wants to buy a new car. He decides he wants to play the stock market to help him with a down payment. He received a hot tip about a new company entering the stock market with shares starting at \$10. He predicts, from trends in the market, that the shares will sell for \$13 six months from now. He has already saved \$125. How many shares would Juan need to buy to have at least \$750 for a down payment in 6 months?

buying @ \$10/share $-10x$
 Selling @ \$13/share $13x$
 already saved \$125 (constant)
 needs 750

$$13x - 10x + 125 \geq 750$$

$$3x + 125 \geq 750$$

$$-125 \quad -125$$

$$3x \geq 625$$

$$\frac{3x}{3} \geq \frac{625}{3}$$

x # of Shares

Juan should purchase at least 209 shares

$$x \geq 208.\bar{3}$$

Example 2

Alexis is saving to buy a laptop that costs \$1100. So far she has saved \$400. She makes \$12 an hour babysitting. What's the least number of hours she needs to work in order to reach her goal?

needs \$1100 total
 makes \$12/hr $12x$
 already saved \$400 (constant)

$$12x + 400 \geq 1100$$

$$-400 \quad -400$$

$$\frac{12x}{12} \geq \frac{700}{12}$$

$$x \geq 58.\bar{3}$$

Alexis should work at least 58.5 or 59 hours

A Primer for the Mathematics of Financial Engineering Dan Stefanica, 2011

Solutions Manual - a Linear Algebra Primer for Financial Engineering Dan Stefanica, 2016-08-22

A Course in Algebra Ernest Borisovich Vinberg, 2003 Great book The author's teaching experience shows in every chapter Efim Zelmanov University of California San Diego Vinberg has written an algebra book that is excellent both as a classroom text or for self study It is plain that years of teaching abstract algebra have enabled him to say the right thing at the right time Irving Kaplansky MSRI This is a comprehensive text on modern algebra written for advanced undergraduate and basic graduate algebra classes The book is

based on courses taught by the author at the Mechanics and Mathematics Department of Moscow State University and at the Mathematical College of the Independent University of Moscow The unique feature of the book is that it contains almost no technically difficult proofs Following his point of view on mathematics the author tried whenever possible to replace calculations and difficult deductions with conceptual proofs and to associate geometric images to algebraic objects Another important feature is that the book presents most of the topics on several levels allowing the student to move smoothly from initial acquaintance to thorough study and deeper understanding of the subject Presented are basic topics in algebra such as algebraic structures linear algebra polynomials groups as well as more advanced topics like affine and projective spaces tensor algebra Galois theory Lie groups associative algebras and their representations Some applications of linear algebra and group theory to physics are discussed Written with extreme care and supplied with more than 200 exercises and 70 figures the book is also an excellent text for independent study
