

Mutations and Genetic Engineering Study Guide Answers

1. Point mutations- one nitrogen base is replaced by a different base, only one amino acid is affected.
Frameshift mutation- one nitrogen base is added (insertion) or removed (deletion). Every amino acid after the mutation is affected.
2. Point shift will only affect one amino acid and a frameshift will affect every amino acid after the mutation. Frameshift mutations tend to be much more serious.
3. Duplication Inversion
Deletion Translocation
4. Selective breeding is only allowing selected organisms with desired traits to breed and produce offspring.
5. Selective breeding is used to produce offspring with desired traits.
6. Hybridization is crossing dissimilar individuals to bring together the best traits of both.
7. With inbreeding there is a smaller gene pool so mutations with negative effects have a better chance of being passed on to offspring.
8. Genetic engineering is making changes to the genetic code of an organism.
9. Recombinant DNA is made by connecting DNA from two different sources.
10. A restriction enzyme is an enzyme that cuts DNA at specific base sequences. It will cut DNA at specific points based on the order of the base pairs. It leaves "sticky ends" that can then be used to fuse DNA from two different sources.
11. Gel electrophoresis is a method of separating DNA fragments based on size. DNA samples are cut using restriction enzymes and then placed in an agarose gel. A current is passed through the gel and the slightly negatively charged DNA move through the gel towards the positive electrode. The smaller pieces are able to travel farther through the gel than the larger pieces. DNA samples can be compared between individuals and used to identify individuals.
12. Bacteria are important because they are easily modified and replicate very quickly.
13. A plasmid is the circular piece of DNA found in bacteria cells.
14. Bacteria can be transformed by using a restriction enzyme to cut the plasmid and then use the same enzyme to cut the human DNA. The human gene (i.e. insulin) is then placed into the bacteria plasmid using the "sticky ends" and the bacteria cell it then able to divide. Every time the bacteria divides the new bacteria cell will have the human gene as part of its genome.
15. Goat that produces spider web, insulin producing bacteria, any other example we went over in class.
16. PCR is a process used to amplify DNA samples, it can produce large volumes of DNA from a small sample.
17. With cloning the donor that is being cloned has the DNA removed from one of its cells. That DNA is then fused with the the egg (ovum) with the DNA removed of a female. The new egg with the donor DNA added is given a slight electric shock and the cell will begin to divide. The developing clone embryo must then be placed into the uterus of a female and the clone will then be birthed.

Concepts of Biology Samantha Fowler, Rebecca Roush, James Wise, 2023-05-12 Black white print Concepts of Biology is designed for the typical introductory biology course for nonmajors covering standard scope and sequence requirements The text includes interesting applications and conveys the major themes of biology with content that is meaningful and easy to understand The book is designed to demonstrate biology concepts and to promote scientific literacy

Genetic Engineering of Plants National Research Council, Board on Agriculture, 1984-02-01 The book is in fact a short text on the many practical problems associated with translating the explosion in basic biotechnological research into the next Green Revolution explains Economic Botany The book is a concise and accurate narrative that also manages to be interesting and personal a splendid little book Biotechnology states Because of the clarity with which it is written this thin volume makes a major contribution to improving public understanding of genetic engineering s potential for enlarging the world s food supply and can be profitably read by practically anyone interested in application of molecular biology to improvement of productivity in agriculture

Safety of Genetically Engineered Foods National Research Council, Institute of Medicine, Board on Agriculture and Natural Resources, Food and Nutrition Board, Board on Life Sciences, Committee on Identifying and Assessing Unintended Effects of Genetically Engineered Foods on Human Health, 2004-07-08 Assists policymakers in evaluating the appropriate scientific methods for detecting unintended changes in food and assessing the potential for adverse health effects from genetically modified products In this book the committee recommended that greater scrutiny should be given to foods containing new compounds or unusual amounts of naturally occurring substances regardless of the method used to create them The book offers a framework to guide federal agencies in selecting the route of safety assessment It identifies and recommends several pre and post market approaches to guide the assessment of unintended compositional changes that could result from genetically modified foods and research avenues to fill the knowledge gaps

Genetically Engineered Crops National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Genetically Engineered Crops: Past Experience and Future Prospects, 2017-01-28 Genetically engineered GE crops were first introduced commercially in the 1990s After two decades of production some groups and individuals remain critical of the technology based on their concerns about possible adverse effects on human health the environment and ethical considerations At the same time others are concerned that the technology is not reaching its potential to improve human health and the environment because of stringent regulations and reduced public funding to develop products offering more benefits to society While the debate about these and other questions related to the genetic engineering techniques of the first 20 years goes on emerging genetic engineering technologies are adding new complexities to the conversation Genetically Engineered Crops builds on previous related Academies reports published between 1987 and 2010 by undertaking a retrospective examination of the purported positive and adverse effects of GE crops and to anticipate what emerging genetic engineering technologies hold for the future This report indicates where there are uncertainties about the economic agronomic health safety or other impacts of GE crops and food and makes recommendations to fill gaps in safety assessments increase regulatory clarity and improve innovations in and access to GE technology Life: The Science of Biology Study Guide William K.
