A Decade of Middle School Mathematics Curriculum Implementation Margaret R. Meyer, Cynthia W. Langrall, 2008-12-01 Associate Editors Fran Arbaugh University of Missouri Columbia David C Webb University of Colorado at Boulder and Murrel Brewer Hoover WVSTEM Center Marshall University The purpose of this book is to document the work of the Show Me Project 1997 2007 and to highlight lessons learned about curriculum implementation Although the Show Me Project was charged with promoting the dissemination and implementation of four distinct comprehensive curriculum programs Connected Mathematics Mathematics in Context MathScape and MathThematics most of the lessons learned from this work are not curriculum specific Rather they cut across the four programs and share commonalities with standards based curriculum reform at any level We believe that documenting these lessons learned will be one of the legacies of the Show Me Project We anticipate that the comprehensive nature of this work will attract readers from multiple audiences that include state and district mathematics supervisors middle grades mathematics teachers and administrators involved in curriculum reform as well as mathematics teacher educators Those about to embark on the review of curriculum materials will appreciate reading about the processes employed by other districts Readers with interests in a particular curriculum program will be able to trace the curriculum specific chapters to gain insights into how the design of the curricula relate to professional development adoption and implementation issues and teachers personal experience using the curriculum materials Individuals who provide professional development at the middle grades level will find chapters that they can use for both general and focused discussions Teachers at all stages of implementation will recognize their own experiences in reading and reflecting on the stories of teacher change Mathematics educators will find ideas on how these curricula can be used in the preparation of preservice middle grades teachers *Standards-based School Mathematics Curricula* Sharon L. Senk, Denise R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters

Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research
