Since its first publication in 1972, more than 30,000 blue-water sailors have looked to this book when injury or illness struck at sea. Virtually every accident or ailment that might occur when professional medical care is unavailable is squarely faced and dealt with, using layman's language and step-by-step instructions that calmly take the reader from diagnosis through treatment to follow-up care. The fifth edition brings this standard work up-to-date with current medical practice. While maintaining its ease of use for quick, easy reference in case of a medical emergency at sea, diagrams inside the front and back covers point the reader to the appropriate section of the book. Each section starts with a short account of a possible accident or sickness that might occur on a voyage, and then lists the steps to be taken by the caregiver. Photographs and diagrams accompany many of the procedures. Separate chapters are devoted to preparing a crew and the boat's medical chest for long cruises, including lists of drugs for which prescriptions are needed. A number of chapters deal with the unique needs of children. The proposed Directive on waste electrical and electronic equipment envisages a producer responsibility. This means that producers and importers will be made responsible for the collection and recycling of these products once they have reached the end of their life. Similar legislation in the Netherlands has resulted in a collective producer responsibility organisation funded by a disposal fee. The establishment of such collective organisations is encouraged by environmental legislation. However, competition law is critical of such co-operation particularly with regard to the disposal fee that is to be passed on to consumers. This study examines the environmental and competition law applicable to producer responsibility organisations. In this regard, the experiences in the Netherlands and a number of other European countries have been studied. It comes to the conclusion that competition law and environmental law may not pull in the same direction. The study suggests a number of possible solutions for the conflict between environmental and competition law in this field. About the author: Hans Vedder (1974) graduated from the University of Groningen in 1997. From 1998 to 2001 he worked as a researcher with the Centre for Environmental Law of the University of Amsterdam. Since 2001 he is lecturer in European law with the University of Groningen. He has published several articles and chapters in books on various aspects of competition and environmental law. Which types of regulatory reinvention work and which don't? This book identifies innovative regulatory best practice internationally in a number of specific contexts, providing policy prescriptions which would better enable agencies to fulfil their regulatory missions. Twenty-five years ago, the Cuyahoga River in Ohio was so contaminated that it caught fire, air pollution in some cities was thick enough to taste, and environmental laws focused on the obvious enemy: large American factories with belching smokestacks and pipes gushing wastes. Federal legislation has succeeded in providing cleaner air and water, but we now confront a different set of environmental problems--less visible and more subtle. This important book

offers thought-provoking ideas on how America can respond to changing public health and ecological risks and create sound environmental policy for the future. The innovative thinkers of the Next Generation Project of the Yale Center for Environmental Law and Policy--experts from business, government, nongovernmental organizations, and academia--propose reforms that balance environmental efforts with other public needs and issues. They call for new foundations for environmental law and policy, adoption of a more diverse set of policy tools and strategies (economic incentives, ecolabels), and new connections between critical sectors (agriculture, energy, transportation, service providers) and environmental policy. Future progress must involve not only officials from the U.S. Environmental Protection Agency and state environmental protection departments, say the authors, but also decision-makers as diverse as mayors, farmers, energy company executives, and delivery route planners. To be effective, next-generation policy-making will view environmental challenges comprehensively, connect academic theory with practical policy, and bridge the gaps that have caused recent policy debates to break down in rancor. This book begins the process of accomplishing these challenging goals. A provocative, handpicked collection of relevant (and surprising) essential recipes for today's cook. We have countless recipes at our disposal today but what are the real keepers, the ones that don't just feed us when we're hungry or impress our friends on Saturday night, but inspire us to get into the kitchen? At the forefront of American cooking for more than 20 years, the editors at America's Test Kitchen have answered this question in an essential collection of recipes that you won't find anywhere else: 100 Recipes Everyone Should Know How to Make. Organized into three recipe sections—Absolute

Essentials, Surprising Essentials, and Global Essentials—each recipe is preceded by a thought-provoking essay that positions the dish. For example, Treating Pasta Like Rice Simplifies Everything; A Covered Pot Is a Surprisingly Good Place to Roast a Chicken; and Re-imagine Pie in a Skillet to Simplify the Process. You'll find useful workday recipes like a killer tomato sauce that's almost as easy as opening a jar of the store-bought stuff; genius techniques for producing amazing flavor—try poaching chicken breasts over a garlic-and-soy- spiked brine (trust us, it's that good); and familiar favorites reinvigorated—the best beef stew comes from Spain (and it's even easier to make than the stateside stew you've been eating for years). Gorgeous photography (shot right in the test kitchen) accompanies every recipe, revealing the finished dish as well as highlights of its preparation. Likely to stir debate among anyone interested in food and cooking, 100 Recipes Everyone Should Know How to Make provides a snapshot of how we cook today and will galvanize even the most jaded cook to get into the kitchen. In order to really see the forest, what's the best way to count the trees? Understanding how the economy interacts with the environment has important implications for policy, regulatory, and business decisions. How should our national economic accounts recognize the increasing interest in and importance of the environment? Nature's Numbers responds to concerns about how the United States should make these measurements. The book recommends how to incorporate environmental and other non-market measures into the nation's income and product accounts. The panel explores alternative approaches to environmental accounting, including those used in other countries, and addresses thorny issues such as how to measure the stocks of natural resources and how to value non-market activities and assets. Specific applications to subsoil minerals, forests, and clean air show how the general principles can be applied. The analysis and insights provided in this book will be of interest to economists, policymakers, environmental advocates, economics faculty, businesses based on natural resources, and managers concerned with the role of the environment in our economic affairs. Interest in brain connectivity inference has become ubiquitous and is now increasingly adopted in experimental investigations of clinical, behavioral, and experimental neurosciences. Methods in Brain Connectivity Inference through Multivariate Time Series Analysis gathers the contributions of leading international authors who discuss different time series analysis approaches, providing a thorough survey of information on how brain areas effectively interact. Incorporating multidisciplinary work in applied mathematics, statistics, and animal and human experiments at the forefront of the field, the book addresses the use of time series data in brain connectivity interference studies. Contributors present codes and data examples to back up their methodological descriptions, exploring the details of each proposed method as well as an appreciation of their merits and limitations. Supplemental material for the book, including code, data, practical examples, and color figures is supplied in the form of a CD with directories organized by chapter and instruction files that provide additional detail. The field of brain connectivity inference is growing at a fast pace with new data/signal processing proposals emerging so often as to make it difficult to be fully up to date. This consolidated panorama of data-driven methods includes theoretical bases allied to computational tools, offering readers immediate hands-on experience in this dynamic arena. The results of a workshop held following the second biannual conference of the International Society for Ecological Economics, Investing in Natural Capital emphasizes the essential connections between natural ecosystems and human socioeconomic systems, and the importance of ensuring that both

remain resilient. Provides current information (last updated in 1996) on neuroanatomy, neurophysiology, and neuropharmacology for both practitioners and students. Case studies and follow-ups, as well as numerous MRIs clarify the material covered in the text. Annotation copyrighted by Book News, Inc., Portland, OR The color photographs and illustrations appearing in select monographs over the past decade represent a significant advance in surgical communication. Previously, black and white renderings were standard because color printing had not been perfected and its cost was prohibitive. We believe the gradual change from black and white etchings and reproductions to detailed color illustrations represents a tremendous twentieth century achievement. In our own urologic practices it became evident that the use of black and white sketches for teaching operative urology, while helpful, left too much to the surgeon's imagination. Even the dimension of depth, produced by varying the intensity of shading, often was inadequate in demonstrating subtle surgical details in a fossa or bed. Since color photography recently has been used to demonstrate operative techniques, we climbed on the bandwagon and photographed in color many of the major operative procedures. However, the reflection of light caused by normal tissue fluid significantly reduces the clarity of photographs. Not infrequently, the crucial operative step is obscured by light reflected on a trickle of blood. Even when meticulous care is taken to irrigate and clean the surgical field, the tissue sheen obscures portions of the field. Color paintings by a gifted artist are not only unique, but can be extraordinary; the vividness with which subtleties can thus be portrayed cannot be matched by photography, black and white or color.
