

Diameter and distance potentiometers - Calibration with code C80.

Enter C80 by simultaneously pressing and holding the CODE and ALU buttons and rotating the main shaft. When C80 appears just release the buttons.

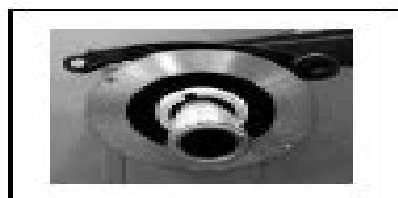

... is read out for 1 second. Then the voltages reading for each pot is displayed

The left-hand reading is the voltage setting of the diameter potentiometer.
The right-hand reading is the voltage setting of the distance potentiometer.

Step 1

Setting the diameter potentiometer:

Mount the wheel adapter on the machine. Pull out the distance gauge arm and place on the edge of wheel adapter. The reading in the left display should be set between 3.55 – 3.60. If adjustment is needed, remove the weight tray and adjust pot on the small gear wheel by using a flat screwdriver (the 10 mm nut may need to be loosened) to turn the shaft of pot. Replace weight tray. On the 2400 the display panel has to be removed first before the weight tray.

Setting the distance potentiometer:

Bring the distance gauge arm back to the home position (resting on the weight tray) the reading in the right display should be within 4.25 to 4.30. If adjustment is needed remove the weight tray and adjust pot on large wheel on left side of machine by using a flat screwdriver (the 10 mm nut may need to be loosened) to turn the shaft of pot. Replace weight tray. On the 2400 the display panel has to be removed first before the weight tray.

Press the CODE button to store both values.

Step 2

Pull out the distance gauge arm by exactly 290 mm (29 on the scale) and press the CODE button to store the value. **IMPORTANT:** Be careful to pull the gauge out to 290 mm or 29 on the scale. This is almost fully extended.

Orogenic Andesites and Plate Tectonics J. B. Gill, 2012-12-06 Students of a phenomenon as common but complex as andesite genesis often are overwhelmed by or overlook the volume and diversity of relevant information Thus there is need for periodic overview even in the absence of a dramatic breakthrough which solves the andesite problem and even though new ideas and data keep the issues in a state of flux Thus I have summarized the subject through mid 1980 from my perspective to help clarify the long standing problem and to identify profitable areas for future research Overviews are more easily justified than achieved and there are fundamental differences of opinion concerning how to go about them It is professionally dangerous and therefore uncommon for single authors especially those under 35 such as I to summarize a broad active field of science in book length thoroughness Review articles in journals multi authored books or symposia proceedings appear instead The single authored approach is intimidating in scale and can result in loss of thoroughness or authority on individual topics The alternatives lack scope or integration or both

Earth Accretionary Systems in Space and Time Peter Anthony Cawood,Alfred Kröner,2009 Accretionary orogens form at convergent plate boundaries and include the supra subduction zone forearc magmatic arc and backarc components They can be broken into retreating and advancing types based on their kinematic framework and resulting geological character Accretionary systems have been active throughout Earth history extending back until at least 3.2 Ga and provide an important constraint on the initiation of horizontal motion of lithospheric plates on Earth Accretionary orogens have been responsible for major growth of the continental lithosphere through the addition of juvenile magmatic products but are also major sites of consumption and reworking of continental crust through time The aim of this volume is to provide a better understanding of accretionary processes and their role in the formation and evolution of the continental crust Fourteen papers deal with general aspects of accretion and metamorphism and discuss examples of accretionary orogens and crustal growth through Earth history from the Archean to the Cenozoic

Hydrothermal Processes and Mineral Systems Franco Pirajno, 2008-10-14 Hydrothermal processes on Earth have played an important role in the evolution of our planet. These processes link the lithosphere, hydrosphere, and biosphere in continuously evolving dynamic systems. Terrestrial hydrothermal processes have been active since water condensed to form the hydrosphere, most probably from about 4.4 Ga. The circulation of hot aqueous solution hydrothermal systems at and below the Earth's surface is ultimately driven by magmatic heat. This book presents an in-depth review of hydrothermal processes and systems that form beneath the oceans and in intracontinental rifts, continental margins, and magmatic arcs. The interaction of hydrothermal fluids with rock walls, the hydrosphere, and the biosphere, together with changes in their composition through time and space, contribute to the formation of a wide range of mineral deposit types and associated wallrock alteration. On Earth, sites of hydrothermal activity support varied ecosystems based on a range of chemotrophic microorganisms, both at surface and in the subsurface. This book also provides an overview of hydrothermal systems associated with meteorite impacts and explores the possibility that hydrothermal processes operate on other terrestrial planets such as Mars or satellites of the outer planets such as Titan and Europa. Possible analogues of extraterrestrial putative hydrothermal processes pose the intriguing question of whether primitive life, as we know it, may exist or have existed in these planetary bodies. Audience: This volume will be of interest to scientists and researchers in geosciences and life sciences departments, as well as to professionals and scientists involved in mining and mineral exploration.
