

# LENS RAY DIAGRAM RULES

Approximate refraction at centerline of lens.

All drawn rays begin at top of object.

Distances measured from the center of the lens.

**Convex Lens: Converging Lens**

1. Any ray parallel to the axis refracts through the opposite focal point.

2. Any ray that passes through the near focal point refracts parallel to the axis. (Reverse of #1)

3. Any ray that passes through the center of the lens continues in straight line.

4. Where the rays intersect, the top of the real image is formed and the image can be drawn between the axis and the intersection. This is a real image.

5. When the object is between the focal point and the lens:

- Rule # 2 ray comes from the direction of near focal point.
- The rays will diverge, so find the virtual image, use dotted lines to extend the refracted rays back wards. This is how your brain interprets where the rays originated.
- To view the image, look back wards through the lens at the object. This is a magnifying glass.
