The Research Libraries of The New York Public Library. Like the deadly tornadoes it documents, this potent combination of high adventure and

hard science is terrifyingly timely in our era of global warming and climate change. The Weather Channel, now America's most watched programming, has in recent years shown us a relentless series of hurricanes, tsunamis, earthquakes, and eruptions killing thousands, turning millions into refugees, and leaving whole cities in shocked, shattered ruins. Of nature's weapons, tornadoes are among the most unforgiving, and here's an unforgettable portrait of these storms and one extraordinary man who challenged them—and produced the first-ever photographs snatched from a rampaging twister's black heart. Tornado chaser Tim Samaras, working with master storyteller Stefan Bechtel, author of Roar of the Heavens, has created a page-turner with narrative force and scientific substance. In the first of five you-are-there accounts, Tornado Hunter opens with a moment-by-moment description of the 2003 catastrophe that engulfed Manchester, South Dakota. The authors evoke the doomed town and its people; the dark menacing funnel; and Samaras's fearless advance into the whirlwind's core to deploy the ingenious equipment he devised. They interweave the tornado chaser's passion, the fascinating science of the storms themselves, and six decades of progress in predicting and recording their onslaught—an art beholden to Samaras's own groundbreaking inventions. Tim Samaras's 2004 article in National Geographic became one of the most widely read in the magazine's history. This powerful book is destined to blast its way onto bestseller lists everywhere. The Guide to Irish Fiction has led to the identification of hundreds of unknown or forgotten Irish authors and their works, and provides thousands of summaries of novels and anthologies. Carefully documented, the book presents details of the publication of Irish fiction in Ireland, England,

North America, Australia, as well as several other European countries. Written for literary scholars and students and for anyone interested in Ireland and its literature, this book also constitutes an essential tool for historians, librarians, collectors of Irish books, and antiquarian booksellers. The rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events, putting higher volumes of water and more pollutants into the nation's rivers, lakes, and estuaries. These changes have degraded water quality and habitat in virtually every urban stream system. The Clean Water Act regulatory framework for addressing sewage and industrial wastes is not well suited to the more difficult problem of stormwater discharges. This book calls for an entirely new permitting structure that would put authority and accountability for stormwater discharges at the municipal level. A number of additional actions, such as conserving natural areas, reducing hard surface cover (e.g., roads and parking lots), and retrofitting urban areas with features that hold and treat stormwater, are recommended.
