"From one of Fine Homebuilding's best-loved authors, Larry Haun, comes a unique story that looks at American home building from the perspective of twelve houses he has known intimately. Part memoir, part cultural history, *A Carpenter's Life as Told by Houses* takes the reader house by house over an arc of 100 years. Along with period photos, the author shows us the sod house in Nebraska where his mother was born, the frame house of his childhood, the production houses he built in the San Fernando Valley, and the Habitat for Humanity homes he devotes his time to now. It's an engaging read written by a veteran builder with a thoughtful awareness of what was intrinsic to home building in the past and the many ways it has evolved. Builders and history lovers will appreciate his deep connection to the natural world, yearning for simplicity, respect for humanity, and evocative notion of what we mean by "home."-- *Modern Carpentry* is a colorful, easy-to-understand source of authoritative and up-to-date information on building materials and construction methods. The text provides detailed coverage of all aspects of light frame construction, including site preparation and layout; foundations; framing; sheathing; roofing; windows and doors; exterior finish; and interior wall, floor, and ceiling finish. Special emphasis is placed on the use of modern tools, materials, and prefabricated components in the application of interior trim, and the construction of stairs and cabinetwork. *Carpentry & Building Construction* is a comprehensive carpentry program that focuses on residential construction with many procedures also applying to light commercial construction. The informative text provides detailed, heavily illustrated information about materials, tools, and processes, with many step-by-step procedures. Includes hardbound student edition aligned to the content standards. This is a study of the world of carpenters and joiners, discussing both the technical and the ritual and religious aspects of building. The heart of the book is an annotated translation of the fifteenth-century carpenter's manual *Lu Ban jing*. Numerous illustrations further enhance the value of this book. *The Genius of Japanese Carpentry* tells the story of the 1200-year-old Yakushiji monastery in Nara and the dedicated modern-day craftsmen who are working to restore what has been lost to the depredations of time, fire and warfare. Although the full monastery reconstruction will not be completed until 2030, one of the main temples, the Picture Hall, has been completely restored employing the same woodworking technology used to create the original building. This new edition of an architectural classic is by Azby Brown—one of the world's leading experts on Japanese architecture. It contains a new preface and many new text materials and photographs—most of them now available in color for the first time. Azby Brown chronicles the painstaking restoration of the temple through extensive interviews with the carpenters and woodworkers along with original drawings based on the plans of master carpenter Tsunekazu Nishioka. An inspiring testament to the dedication of these craftsmen and their philosophy of carpentry work as a form of personal fulfillment, *The Genius of Japanese Carpentry* offers detailed documentation of this singular project and a moving reminder of the unique cultural continuity found in Japan. This book has been designed as a basic text for students in wood technology classes at the high school, vocational school, and community junior college levels. It will also be helpful to those in apprenticeship training and to do-it-yourselfers who wish to undertake building or remodeling projects. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. "Modern Carpentry" provides detailed coverage of all aspects of light frame construction. Throughout the text, safe working practices are emphasized and special attention is paid to proper use of tools, materials, and prefabricated components. This book provides the apprentice or trainee carpenter and joiner with the basic technical knowledge necessary to complete the first half of a City and Guilds Course in Carpentry and Joinery. It will also be a useful reference to any persons studying for examinations, or simply wishing to further their knowledge in one of the associated areas, such as wood machining, cabinet making or general building construction. Dealing with the basic skills and techniques employed in the present day construction industry, the text assumes little prior knowledge of the subject, but lays before the reader a simple, straight forward and readable out of the skills, tools, materials and methods likely to be used or encountered in the workshop, on site or during studies at home or in college. *Modern Carpentry* is a colorful, easy-to-understand source of authoritative and up-to-date information on building materials and construction methods. The text provides detailed coverage of all aspects of light frame construction, including site preparation and layout; foundations; framing; sheathing; roofing; windows and doors; exterior finish; stairs; cabinetwork and interior wall, floor, and ceiling finish. Special emphasis is placed on the use of the latest tools, materials, and prefabricated components. Everything you need to know to estimate, build, and repair practically every type of roof covering: asphalt shingles, roll roofing, wood shingles & shakes, clay tile, slate, metal, built-up, and elastomeric. Shows how to measure and estimate most roofs (including estimating shortcuts discovered by the author), how to install leak-proof underlayment and flashing, and how to solve problems with insulation, vapor barriers, and waterproofing. Over 300 large, clear illustrations that help you find the answers to all your roofing questions. Building construction details in easy-to-understand form. One of the construction industry's longest-running, most relied-on references, *The Gypsum Construction Handbook* was first published by the U.S. Gypsum Company in 1904. For more than a century and through several editions, the book has become a trusted standard. This new 6th edition is an illustrated, comprehensive, and authoritative guide on all facets of gypsum construction. You'll find the newest product developments, installation methods, fire- and sound-rated construction information, illustrated framing-to-finish application instructions, estimating and planning information, and more. System descriptions - together with full data on products, accessories, tools, equipment, and applications - help plan and estimate projects and ensure compliance with performance criteria. Cost- and time-saving techniques keep the work on budget. New in the sixth edition are chapters on sustainable construction methods and products, building movement, fire resistance, heat transfer, sound transmission, and vapor/moisture control. The Handbook covers both new construction and repair and remodeling and includes: framing drywall and veneer plaster joint treatment and plaster finishing interior cement board ceilings conventional plaster Provides students with quality construction skills. This comprehensive carpentry textbook focuses on residential construction that is also

applicable for light commercial construction. This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. Takes you through every step of house construction, in such detail you can use it to build your own home. This is a study of the world of carpenters and joiners, discussing both the technical and the ritual and religious aspects of building. The heart of the book is an annotated translation of the fifteenth-century carpenter's manual Lu Ban jing. Numerous illustrations further enhance the value of this book. Math for Carpentry and Construction is designed specifically for carpentry and construction students, allowing them to learn and apply basic math skills in a very relatable context. Each unit begins with an explanation of the basic concept behind each math operation, followed by clear instructions for performing the operation, and a variety of carpentry- and construction-related practice problems to reinforce the concept. This format provides a practical approach to learn important math skills and troubleshooting skills that will be used in carpentry shops and construction sites. A new Appendix, Construction Diagrams and Terms, defines and illustrates key trade terms and components that students may have not yet been exposed to in their carpentry/construction program. From lot stakeout to interior finishing, this text provides coverage of all the capentry basics, starting with descriptions and illustrations of the tools you'll need and how to use them through to important safety precautions. Excerpt from Modern Carpentry and Building: Giving Methods of Obtaining the Various Cuts in Carpentry Fourteen years ago The Modern Carpenters' Companion and Builders' Guide was issued, and has since met with a sale of ten thousand copies; which, considering the fact that it has been advertised but very little indeed, shows that it met a want. Some complaint has been made that the illustrations did not always come opposite the descriptions, and many have expressed a desire for a much larger number of floor plans of modern residences, accompanied by elevations or perspectives to show the general style of exterior finish; others wanted complete framing plans and specifications. For many reasons it has been deemed best to remodel and add to this book, thus bringing it up to date, and meeting most of the above mentioned requirements, and to distinguish this revised book from the former one, it has been decided to call it Modern Carpentry and Building. It must not be inferred that this is a thorough, complete and exhaustive work on carpentry, dealing with framing odd shaped structures, groined arches, and the like.
