

Démarche qualité pré-analytique en microbiologie

La microbiologie, comme toutes les autres disciplines du laboratoire de biologie médicale, doit bénéficier d'une démarche qualité structurée. Le biologiste est responsable de son efficacité. Nous présentons ici, suite à l'intervention du professeur Diamant, la façon dont la diversité des prélèvements et des agents pathogènes rend complexe la démarche appliquée à la phase pré-analytique en microbiologie.

Pour s'assurer que la phase pré-analytique répond aux exigences de la démarche qualité, il faut d'abord savoir en quoi elle consiste. La phase pré-analytique commence à la rédaction de la demande d'examen par le clinicien, passe par la réalisation ou le recueil du prélèvement, l'acheminement au laboratoire et la prise en charge par le laboratoire jusqu'au moment de la réalisation effective de la recherche microbiologique. Elle peut se résumer en trois phases :

- Phase 1 : le service clinique et le transport ;
 - Phase 2 : la réception au laboratoire ;
 - Phase 3 : l'activité pré-analytique dans la zone de réalisation technique.
- Elle concerne tant l'échantillon que les documents ou informations qui l'accompagnent.

Le diagramme d'Ishikawa

L'utilisation du diagramme d'Ishikawa (figure 5), ou méthode des 5 M, est une aide pour identifier tous les "intervenant" de cette phase de la manière la plus complète possible.

M comme matière première... ou échantillons

Ce sont tous les échantillons reçus par le laboratoire pour réaliser les recherches microbiologiques. Leur grande variété est l'une des spécificités de la microbiologie, chacun devant être recueilli, conservé dans des conditions définies pour préserver sa qualité (tableau 1).

M comme main d'œuvre... ou personnel

Ce sont toutes les personnes qui interviennent dans cette phase pré-analytique, depuis la génération de la demande jusqu'à la réalisation de la recherche microbiologique. Ces personnes appartiennent ou non au personnel du laboratoire. Il s'agit des cliniciens, des infirmières, des nouniers, des secrétaires, des techniciens, des biologistes. Ces personnes doivent être formées, sensibilisées aux tâches spécifiques qui contribuent à une recherche microbiologique de qualité et à la nécessaire coordination de leur travail. Elles doivent avoir à leur disposition tout document nécessaire à leurs tâches (guides, fiche de prélèvement, de transport...).

M comme milieu... ou environnement

Géographiquement, la phase pré-analytique fait intervenir plusieurs lieux. Le premier de ces lieux sera différent selon que le prélèvement est réalisé en service clinique d'un établissement de soins, au domicile du patient ou chez le médecin. Intervient ensuite le moyen de transport et, enfin, la zone de réception au laboratoire. Si le prélèvement est réalisé directement au laboratoire, la salle de prélèvement est le seul lieu en amont de

la réalisation technique. Ces différents environnements devront répondre aux exigences à l'égard des risques classiquement rencontrés (hygiène, sécurité, confidentialité...).

M comme méthode... ou technique

Ce sont tous les savoir-faire de chaque corps de métier appliqués à la phase pré-analytique de microbiologie, ainsi que les matériels nécessaires à l'exercice de ce savoir-faire. Le laboratoire doit s'assurer que ces matériels sont disponibles et que chaque fois que nécessaire, les documents descriptifs (guides, procédures, instructions...) et les documents supports (feuille de prélèvement selon la nature de l'échantillon, feuille de route...) sont valides et également disponibles.

M comme matériel... ou automates

On peut faire figurer ici les matériels associés aux méthodes préalablement citées. On peut également mentionner l'informatique du laboratoire, l'interface avec l'informatique de l'établissement, s'il existe une prescription connectée, l'interface avec l'homme (clavier, scanner, douche...).

Tableau 1. Les principes de transport selon la nature de l'échantillon.

Nature d'échantillon	Principes de transport
Hémocultures	Rapidement puis dans l'automobile, sinon, frigo de haut vol (gel par pompe à eau forte...)
Liquides (liquide cytotactique)	Seringue bouchée stérilement (permetteurs), température ambiante
Liquide articulaire	
Pus	Glace 7 Milieu de transport antibiotique
Urinae	Glace 7 Bougie-formule 7
Bismes	Éviter la dessiccation, conditionnement aseptique, température ambiante
Pièces anatomiques	Conditionnement aseptique 7
Matériel prothétique	Température ambiante, sinon +4 °C
Secretions	Température ambiante
Selles	Milieu Carry-Blair, échantillon 7
Exsudat*	Catex 7, Aguide 7 (Glace 7 Milieu de transport 7

* Un container matériel de la réception à partir des excréments aseptique associé avec les excréments. Réserve Le container est gelé en deux et doit servir d'isolement thermique pour les germes fragiles.

Figure 5. Diagramme d'Ishikawa.
