In the Bubble John Thackara, 2006-02-17 How to design a world in which we rely less on stuff and more on people We're filling up the world with technology and devices but we've lost sight of an important question What is this stuff for What value does it add to our lives So asks author John Thackara in his new book In the Bubble Designing for a Complex World These are tough questions for the pushers of technology to answer Our economic system is centered on technology so it would be no small matter if tech ceased to be an end in itself in our daily lives Technology is not going to go away but the time to discuss the end it will serve is before we deploy it not after We need to ask what purpose will be served by the broadband communications smart materials wearable computing and connected appliances that we're unleashing upon the world We need to ask what impact all this stuff will have on our daily lives Who will look after it and how In the Bubble is about a world based less on stuff and more on people Thackara describes a transformation that is taking place now not in a remote science fiction future it's not about as he puts it the schlock of the new but about radical innovation already

emerging in daily life We are regaining respect for what people can do that technology can't In the Bubble describes services designed to help people carry out daily activities in new ways Many of these services involve technology ranging from body implants to wide bodied jets But objects and systems play a supporting role in a people centered world The design focus is on services not things And new principles above all lightness inform the way these services are designed and used At the heart of In the Bubble is a belief informed by a wealth of real world examples that ethics and responsibility can inform design decisions without impeding social and technical innovation

History of Nordic Computing 2 John Impagliazzo,Timo Järvi,Petri Paju,2009-09-21 The First Conference on the History of Nordic Computing HiNC1 was organized in Trondheim in June 2003 The HiNC1 event focused on the early years of computing that is the years from the 1940s through the 1960s although it formally extended to year 1985 In the preface of the proceedings of HiNC1 Janis Bubenko Jr John Impagliazzo and Arne S lvberg describe well the peculiarities of early Nordic computing 1 While developing hardware was a necessity for the first professionals quite soon the computer became an industrial product Computer scientists among others grew increasingly interested in programming and application software Progress in these areas from the 1960s to the 1980s was experienced as astonishing The developments during these decades were taken as the focus of HiNC2 During those decades computers arrived to every branch of large and medium sized businesses and the users of the computer systems were no longer only computer specialists but also people with other main duties Compared to the early years of computing before 1960 where the number of computer projects and applications was small capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult The HiNC2 conference attempted to help in this endeavor

The Future of Technology Tom Standage,2005-08-01 From the industrial revolution to the railway age through the era of electrification the advent of mass production and finally to the information age the same pattern keeps repeating itself An exciting vibrant phase of innovation and financial speculation is followed by a crash after which begins a longer more stately period during which the technology is actually deployed

properly This collection of surveys and articles from The Economist examines how far technology has come and where it is heading Part one looks at topics such as the greying maturing of IT the growing importance of security the rise of outsourcing and the challenge of complexity all of which have more to do with implementation than innovation Part two looks at the shift from corporate computing towards consumer technology whereby new technologies now appear first in consumer gadgets such as mobile phones Topics covered will include the emergence of the mobile phone as the digital Swiss Army knife the rise of digital cameras which now outsell film based ones the growing size and importance of the games industry and its ever closer links with other more traditional parts of the entertainment industry and the social impact of technologies such as text messaging Wi Fi and camera phones Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology energy technology and nanotechnology

Gender Intelligence Barbara Annis, Keith Merron, 2014-05-13 World renowned experts on gender intelligence Barbara Annis and Keith Merron suggest it's time to move beyond arguments based on politics and fairness building an economic business case for gender diversity in the workplace Despite forty years of laws quotas diversity training and legal expenses aimed toward equalizing pay opportunities and working conditions between the sexes the glass ceiling remains firmly intact For too long companies have played the numbers game attempting to tackle gender imbalance by forcing affirmative action policies and numeric standards on

organizations to increase the representation of women in management Yet these efforts have rarely been sustained In this groundbreaking comprehensive analysis based on more than twenty five years of in depth surveys involving 100 000 men and women across dozens of Fortune 500 companies Barbara Annis and Keith Merron provide a deeper understanding of the multiplicity of forces that have combined to create and perpetuate gender inequality Gender Intelligence exposes common false assumptions that prevent men and women from successfully performing together at work myths exacerbated by worn out theories of gender blindness and sameness thinking It show how a small but growing number of courageous leading edge companies have broken through the barriers to successfully advance women making the remarkable transformation from compliance to choice from pressure to preference and show how it can be done in any business Gender Intelligence features 17 illustrations
