Music in Our Lives Gary E. McPherson, Jane W. Davidson, Robert Faulkner, 2012-03-15 Why do some children take up music while others don't? Why do some excel whilst others give up? Why do some children favour classical music whilst others prefer rock? These are questions that have puzzled music educators, psychologists and musicologists for many years. Yet they are incredibly difficult and complex questions to answer. *Music in our lives* takes an innovative approach to trying to answer these questions. It is drawn from a research project that spanned fourteen years and closely followed the lives of over 150 children learning music from their seventh to their twenty-second birthdays. This detailed longitudinal approach helped the authors probe a number of important issues. For example, how do you define musical skill and ability? Is it true, as many assume, that continuous engagement in performance is the sole way in which those skills can be developed? What are the consequences of trends and behaviours observed amongst the general public and their listening consumption? After presenting an overview and detailed case study explorations of musical lives, the book provides frameworks and theory for further investigation and discussion. It tries to present an holistic interpretation of these studies and looks at their implications for musical development and education. Accessibly written by three leading researchers in the fields of music education and music psychology, this book makes a powerful contribution to understanding the dynamic and vital context of music in our lives.

Applications of Flow in Human Development and Education Mihaly Csikszentmihalyi, 2014-08-08 The third volume of the collected works of Mihaly Csikszentmihalyi covers his work on the application of flow in areas that go beyond the field of leisure where the concept was first applied. Based on his personal experience with schooling and learning as well as that of many others and contrary to what Cicero claimed, Csikszentmihalyi arrived at the conclusion that instead of taking pride in making the roots of knowledge as bitter as possible, we should try to make them sweeter. Just as flow became a popular and useful concept in voluntary activities, it could likewise be applied in education with the end result of young people being more likely to continue learning not just because they have to, but because they want to. This volume brings together a number of articles in which Csikszentmihalyi develops ideas about how to make education and more generally the process of learning to live a good life more enjoyable. Since theory is the mother of good practice, the first eleven chapters are devoted to theoretical reflections. Some are general and explore what it means to be a human being, what it means to be a person when we look at life from the perspective of flow. Others are more narrowly focused on such topics as consumption, education, teaching and learning. They help laypeople reflect how they can arrange their lives in such a way as to leave a small ecological footprint while getting the most enjoyment. The second section of the volume contains a dozen empirical articles on similar topics. They deal with the development of identity and self-worth with the formation of goals and motivation with loneliness and family life.

Tamis-LeMonda, 2020-08-13 This multidisciplinary volume features many of the world's leading experts of infant development who synthesize their research on infant learning and behaviour while integrating perspectives across neuroscience, socio-cultural context and policy. The chapters present theoretical and empirical depth and rigor across specific domains of development while highlighting reciprocal connections among brain, behavior and social-cultural context. The handbook simultaneously educates, enriches and encourages. It educates through detailed reviews of innovative methods and empirical foundations and enriches by considering the contexts of brain, culture and policy.
