Digital Art Jan 19 2022 Digital art, along with the technological developments of its medium, has rapidly evolved from the digital revolution into the social media era and to the postdigital and post-Internet landscape. This new, expanded edition of this invaluable overview of the medium traces the emergence of artificial intelligence, augmented and mixed realities, and Non-Fungible Tokens (NFTs), and surveys themes explored by digital artworks in the areas of activism, networks and telepresence, and ecological art and the Anthropocene. Christiane Paul considers all forms of digital art, focusing on the basic characteristics of their aesthetic language and their technological and art-historical evolution. By looking at the ways in which internet art, digital installation, software art, AR and VR have emerged as recognized artistic practices, Digital Art is an essential critical guide.

Postinternet Art and Its Afterlives Sep 07 2023 Focusing on the 'postinternet' art of the 2010s, this volume explores the widespread impact of recent internet culture on the formal and conceptual concerns of contemporary art. The 'postinternet' art movement is splintered and loosely defined, both in terms of its form and its politics, and has come under significant critique for this reason. This study will provide this definition, offering a much-needed critical context for this period of artistic activity that has had and is still having a major impact on contemporary culture. The book presents a picture of what the art and culture made within and against the constraints of the online experience look, sound, and feel like. It includes works by Petra Cortright, Jon Rafman, Jordan Wolfson, DIS, Amalia Ulman, and Thomas Ruff, and presents new analyses of case studies drawn from the online worlds of the 2010s, including vaporwave, anonymous image board culture, 'irony bros' and 'edgelords', viral extreme sports stunts, and GIFs. The book will be of interest to scholars working in art history, contemporary art, and digital culture.

The Art of Creative Research Mar 21 2022 Everyone who writes a novel, a poem, or a memoir almost certainly conducts research along the way whether to develop a story idea, or to capture the voice, the speech patterns, or the exact words of a character, or to ensure authenticity or accuracy of detail in describing a person, a place, an object, a setting. This kind of experiential research is an art form of its own, and this book is the first to treat it as such. Addressing writers of fiction, poetry, and nonfiction, Philip Gerard covers all the different kinds of archives that might inform creative work, including historical documents, site visits, interviews, and memory. He offers practical tips for drawing on these different types of sources, including such mundane matters as planning and budgeting for travel costs, arranging access in advance, and troubleshooting when plans go awry. And he illustrates how the insights gleaned from research can be incorporated into stories, poems, and nonfiction using examples from a wide range of writers."

Art of the Deal Mar 01 2023 Art today is defined by its relationship to money as never before. Prices of living artists' works have been driven to unprecedented heights, conventional boundaries within the art world have collapsed, and artists now think ever more strategically about how to advance their careers. Artists no longer simply make art, but package, sell, and brand it. Noah Horowitz exposes the inner workings of the contemporary art market, explaining how this unique economy came to be, how it works, and where it's headed. He takes a unique look at the globalization of the art world and the changing face of the business, offering the clearest analysis yet of how investors speculate in the market and how emerging art forms such as video and installation have been drawn into the commercial sphere. By carefully examining these developments against the backdrop of the deflation of the contemporary art bubble in 2008, "Art of the Deal" is a must-read book that demystifies collecting and investing in today's art market.

Brain and Art Feb 17 2022 Could we understand, in biological terms, the unique and fantastic capabilities of the human brain to both create and enjoy art? In the past decade neuroscience has made a huge leap in developing experimental techniques as well as theoretical frameworks for studying emergent properties following the activity of large neuronal networks. These methods, including MEG, fMRI, sophisticated data analysis approaches and behavioral methods, are increasingly being used in many labs worldwide, with the goal to explore brain mechanisms corresponding to the artistic experience. The 37 articles composing this unique Frontiers Research Topic bring together experimental and theoretical research, linking state-of-the-art knowledge about the brain with the phenomena of Art. It covers a broad scope of topics, contributed by world-renowned experts in vision, audition, somato-sensation, movement, and cinema. Importantly, as we felt that a dialog among artists and scientists is essential and fruitful, we invited a few artists to contribute their insights, as well as their art. Joan Miró said that "art is the search for the alphabet of the mind." This volume reflects the state of the art search to understand neurobiological alphabet of the Arts. Diverse Perspectives and State-of-the-Art Approaches to the Utilization of Data-Driven Clinical Decision Support Systems Jul 25 2022 The medical domain is home to many critical challenges that stand to be overcome with the use of data-driven clinical decision support systems (CDSS), and there is a growing set of examples of automated diagnosis, prognosis, drug design, and testing. However, the current state of AI in medicine has been summarized as "high on promise and relatively low on data and proof." If such problems can be addressed, a data-driven approach will be very important to the future of CDSSs as it simplifies the knowledge acquisition and maintenance process, a process that is time-consuming and requires considerable human effort. Diverse Perspectives and State-of-the-Art Approaches to the Utilization of Data-Driven Clinical Decision Support Systems critically reflects on the challenges that data-driven CDSSs must address to become mainstream healthcare systems rather than a small set of exemplars of what might be possible. It further identifies evidence-based, successful data-driven CDSSs. Covering topics such as automated planning, diagnostic systems, and explainable artificial intelligence, this premier reference source is an excellent resource for medical professionals, healthcare administrators, IT managers, pharmacists, students and faculty of higher education, librarians, researchers, and academicians.
