The Craft of Scientific Presentations Michael Alley, 2006-05-17 This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action such as funding a proposal as well as presentations made to communicate information and it considers these from four perspectives: speech structure, visual aids, and delivery. It also discusses computer based projections and slide shows as well as overhead projections. In particular it looks at ways of organizing graphics and text in projected images and of using layout and design to present the information efficiently and effectively.

Teaching and Learning STEM Richard M. Felder, Rebecca Brent, 2024-03-19 The widely used STEM education book updated *Teaching and Learning STEM: A Practical Guide* covers teaching and learning issues unique to teaching in the science, technology, engineering, and math (STEM) disciplines. Secondary and postsecondary instructors in STEM areas need to master specific skills such as teaching problem solving which are not regularly addressed in other teaching and learning books. This book fills the gap addressing topics like learning objectives, course design, choosing a text, effective instruction, active learning, teaching with technology, and assessment, all from a STEM perspective. You will also gain the knowledge to implement learner centered instruction which has been shown to improve learning outcomes across disciplines. For this edition, chapters have been updated to reflect recent cognitive science and empirical educational research findings that inform STEM pedagogy. You will also find a new section on actively engaging students in synchronous and asynchronous online courses and content has been substantially revised to reflect recent developments in instructional technology and online course development and delivery. Plan and deliver lessons that actively engage students in person or online. Assess students' progress and help ensure retention of all concepts learned. Help students develop skills in problem solving, self-directed learning, critical thinking, teamwork, and communication. Meet the learning needs of STEM students with diverse backgrounds and identities. The strategies presented in *Teaching and Learning STEM* don't require revolutionary, time-intensive changes in your teaching but rather a gradual integration of traditional and new methods. The result will be a marked improvement in your teaching and your students' learning.
