A Framework for K-12 Science Education National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards, 2012-02-28 Science engineering and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States position in the global economy is declining in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and subsequently revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are crosscutting concepts that unify the study of science through their common application across science and engineering: scientific and engineering practices and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences; and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments. Biosensors Based on Sandwich Assays Fan Xia, Xiaojin Zhang, Xiaoding Lou, Quan Yuan, 2018-01-09 This book shows the various sandwich assays that are constructed from recognition molecules such as antibodies, oligonucleotide sequences, and aptamers developed as a result of nano and biotechnology advances. It consists of ten chapters presenting interesting examples of these assays organized according to the type of analytic methods: colorimetric, fluorescence, electrochemical, etc., and detected objects: protein, nucleic acid, small molecule, ion, etc. It also includes a chapter discussing the introduction of sandwich assays as biosensors for the detection of a range of targets. It is an interesting and useful resource for a wide readership in various fields of chemical science and nanotechnology.

Revision Decisions Jeff Anderson, Deborah Dean, 2023-10-10 Revision is often a confusing and difficult process for

students but it is also the most important part of the writing process. If students leave our classrooms not knowing how to move a piece of writing forward, we've failed them. *Revision Decisions: Talking Through Sentences and Beyond* will help teachers develop the skills students need in an ever-evolving writing language and reading world. Jeff Anderson and Deborah Dean have written a book that engages writers in the tinkering, playing, and thinking that are essential to clarify and elevate writing. Focusing on sentences, the authors use mentor texts to show the myriad possibilities that exist for revision. Essential to their process is the concept of classroom talk. Readers will be shown how revision lessons can be discussed in a generative way and how each student can benefit from talking through the revision process as a group. *Revision Decisions* focuses on developing both the writing and the writer. The easy-to-follow lessons make clear and accessible the rigorous thinking and the challenging process of making writing work. Narratives, setup lessons, templates, and details about how to move students toward independence round out this essential book. Additionally, the authors weave the language reading and writing goals of the Common Core and other standards into an integrated and connected practice. The noted language arts teacher James Britton once said that good writing floats on a sea of talk. *Revision Decisions* supports those genuine conversations we naturally have as readers and writers, leading the way to the essential goal of making meaning. Non-Toxic Aly Cohen, Frederick vom Saal, 2020. *Non-Toxic* gives insightful, even-handed, evidence-based discussion about the environment in which we now find ourselves living, the environmental hazards, and ways in which we may better protect ourselves and our families from increased risk of illness and disease due to harmful chemical and radiation exposure. Espousing the principles developed by famed physician and author Dr. Andrew Weil and making them accessible for the general reader, the book takes account of the whole person, including all aspects of lifestyle, in offering guidance to living healthy in a chemical world.
