"Do not wish that all things will go well with you, but that you will go well with all things." "In this way, you will overcome life's challenges, rather than be overcome by them." Epictetus (c. AD 50-135) was a former Roman slave who became a great teacher, deeply influencing the future emperor Marcus Aurelius among many others. His philosophy, Stoicism, was practical, not theoretical--aimed at relieving human suffering here and now. Epictetus knew suffering--besides being enslaved, he was lame in one leg and walked with a crutch. The Manual is a collection of Epictetus' essential teachings and pithy sayings, compiled by one of his students. It is the most accessible and actionable guide to Stoic philosophy, as relevant today as it was in the Roman Empire. This new edition, published by Ancient Renewal, is rendered in contemporary English by Sam Torode. The eye, the camera's lens, and the computer screen all treat color differently. This important addition to the designer's reference

library helps resolve the differences among the numerous media that contemporary designers work with every day. Comprehensive in scope, it brings together key elements of color theory, practice, and application, addressing a wide range of issues specific to graphic design in both print and digital media. Beyond step-by-step techniques for managing color in modern graphic design practice, Designer's Color Manual also addresses topics which help designers understand color in a variety of disciplines, looking at historical color systems, color in art, and the psychology of color, among dozens of other topics. Author and designer Tom Fraser also takes other graphics-related practices into account -- interior design, digital rendering, packaging and merchandise design -- aiding the designer in mastering the far-reaching effects of color in almost any project. Heavily illustrated with over 1,000 color images, Designer's Color Manual addresses an area that's been gray for too long in the full-color world of contemporary design. This book provides trainees in ophthalmology with a complete guide to oculoplasty. Divided into seven sections, the text covers orbit, eyelid, lacrimal system, and ocular tumours. The final sections include histopathology slides, discussion on surgical instruments and suture materials, and a question bank to assist revision.
