Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a

textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world. Can an employee-owned company succeed? Here is the inside story of one that thrived and grew to become a significant force in the nation’s scientific and technical markets. In 1969, Dr. J. Robert Beyster founded Science Applications International Corporation (SAIC) with a unique vision of creating an employee-owned organization run according to 12 principles of success that encourage entrepreneurship and accountability. Today, SAIC has grown from a handful of scientists to over 43,000 employees—most of whom hold company equity—and more than \$8 billion in annual revenue, a steadily rising stock price, and top rankings as a contractor to government and business organizations. In this book, Dr. Beyster tells the story of SAIC, and offers valuable lessons to entrepreneurs and managers on how to build a company in which loyalty to values goes hand in hand with success. Dr. J. Robert Beyster (La Jolla, CA) is the founder of Science Applications International Corp. (SAIC). He served as CEO and chairman of the company for 35 years. Beyster continues to promote innovation and employee ownership through his Foundation for Enterprise Development and the Beyster Institute at the Rady School of Management at the University of California, San Diego. Peter Economy (La Jolla, CA) is Associate Editor of *Leader to Leader*, the award-winning publication for the Leader to Leader Institute, and a bestselling author of titles such as *The Management Bible* (0-471-70545-4) and *Enterprising Nonprofits: A Toolkit for Social Entrepreneurs* (0-471-39735-0). For more than 40 years, *Computerworld* has been the leading source of technology news and information for IT influencers worldwide. *Computerworld’s* award-winning Web site ([Computerworld.com](http://Computerworld.com)), twice-monthly publication, focused conference series and custom research form the hub of the world’s largest global IT media network. Newspaper columns blare the news daily. There is no doubt that we are struggling through a worldwide economic and financial crisis of a magnitude not witnessed since the Great Depression. In this environment, fraught with danger, no company can afford to take a wait-and-see attitude. One hesitation or misstep can result in the rapid demise of a once stalwart enterprise. Even small miscalculations can topple mighty empires; consider the U.S. auto industry, for example. The severity of the crisis demands that your company understand its causes, diagnose carefully, implement decisively and monitor constantly. However, the crisis also creates chances for companies that learn to assess risk, recognize opportunity and take action quickly. This book is an antidote to the chorus of doom-and-gloom, a manual for business leaders and employees who are ready to fight. In *Beat the Crisis*, international strategy guru, Hermann Simon, offers 33 practical actions that any company can take immediately. Organized into broad categories—“Changing Customer Needs,” “Sales and the Sales Force,” “Managing Offers and Prices” and “Services”—Simon shows companies how to focus on the areas where emphatic action can have quick and maximum impact on corporate performance. Drawing from dozens of successful cases around the world, Simon helps readers

learn to read the market signals, develop quick solutions, and stay a step ahead of their competitors, while avoiding the pitfalls looming in the crisis. A concluding chapter looks beyond the crisis and considers the longer-term socio-political and business consequences, in which Simon foresees a new era of restraint. Cyanide occurs in many industrial and municipal wastewaters and is often an expected constituent of typical treatment plant wastewater streams. However, a growing number of wastewater treatment plants (WWTPs) across the USA have detected cyanide in chlorinated effluents at levels exceeding influent concentrations. Because water quality criteria and related discharge limits are typically low some of these WWTPs periodically exceed effluent cyanide standards. Potential causes include cyanide formation during wastewater chlorination processes, the presence of interferences that cause false negatives, and false positives caused by artifacts of sample handling or analytical techniques. The possible causes of the apparent cyanide formation phenomenon were investigated in this study.
