Internal Combustion Engines Institution of Mechanical Engineers, 2014-10-10. This book presents the papers from the Internal Combustion Engines Performance, fuel economy, and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy-duty on and off-highway transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures, and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO₂ emissions and the dependence on oil-derived fossil fuels whilst meeting the future more stringent constraints on gaseous and particulate material emissions as set by EU, North American, and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies, and data comparisons. Presents the latest requirements and challenges for personal transport applications. Gives an insight into the technical advances and research going on in the IC Engines field. Provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets.

Global Status Report on Road Safety, 2009. Approximately 1.3 million people die each year on the world's roads, and between 20 and 50 million sustain non-fatal injuries. The Global status report on road safety is the first broad assessment of the road safety situation in 178 countries, using data drawn from a standardized survey. The results show that road traffic injuries remain an important public health problem, particularly for low-income and middle-income countries. Pedestrians, cyclists, and motorcyclists make up almost half of those killed on the roads, highlighting the need for these road users to be given more attention in road safety programmes. The results suggest that in many countries, road safety laws need to be made more comprehensive while enforcement should be strengthened. The Global status report on road safety results clearly show that significantly more action is needed to make the world's roads safer. Ed.
