The book begins by describing the difference between educational cultures that praise students for "right answer" and the law school culture that rewards nuanced analysis of ambiguous situations in which more than one approach may be correct. Enormous care is devoted to explaining precisely how and why legal analysis frequently produces such perplexing situations. But the authors don't stop with mere description. Instead, *Getting to Maybe* teaches how to excel on law school exams by showing the reader how legal analysis can be brought to bear on examination problems. The book contains hints on studying and preparation that go well beyond conventional advice. The authors also illustrate how to argue both sides of a legal issue without appearing wishy-washy or indecisive. Above all, the book explains why exam questions may generate feelings of uncertainty or doubt about correct legal outcomes and how the student can turn these feelings to his or her advantage. In sum, although the authors believe that no exam guide can substitute for a firm grasp of substantive material, readers who devote the necessary time to learning the law will find this an invaluable guide to translating learning into better exam performance. "This book should revolutionize the ordeal of studying for law school exams... Its clear, insightful, fun to read, and right on the money." — Duncan Kennedy, Carter Professor of General Jurisprudence, Harvard Law School "Finally a study aid that takes legal theory seriously... Students who master these lessons will surely write better exams. More importantly, they will also learn to be better lawyers." — Steven L. Winter, Brooklyn Law School "If you can't spot a 'fork in the law' or a 'fork in the facts' in an exam hypothetical, get this book. If you don't know how to play 'Czar of the Universe' on law school exams (or why), get this book. And if you do want to learn how to think like a lawyer—a good one—get this book. It's, quite simply, stone cold brilliant." — Pierre Schlag, University of Colorado School of Law (Law Preview Book Review on The Princeton Review website) Attend a *Getting to Maybe* seminar! Horowitz The Sterling Hall Bombing that occurred on the University of Wisconsin-Madison campus on August 24, 1970, was committed by four young people as a protest against the university's research connections with the U.S. military during the Vietnam War. The bomb was intended to destroy the Army Mathematics Research Center (AMRC). It caused massive destruction to other parts of the building and nearby buildings as well. It resulted in the death of one, injury of three others, and significant destruction to the physics department and its equipment. Author Gary Horowitz was a student at Madison. "Obviously, you are not chanting the exultations of China which many of my country people are used to listening to." A Chinese scholar recognizes that this book is not a further attempt to curry favor with China by tickling its leaders' ears. This book examines what is right and the truth about what is wrong with English language education in Chinese colleges and universities. As a Chinese colleague further states, "Most Chinese are learning English like one learning swimming ashore." We have been writing about these shortcomings for ten years. It arises because administrators posted to their positions due to party affiliation and good standing, are basically ignorant of administration and educational matters. "The VIPs of EEC believe that they know, while they don't, what are under their supervision; the professionals of EEC believe that what they are doing academically is helpful while it's not. The two types are making the common non-professional people believe that they are knowingly reliable while they are not. . . . The educated as well as the illiterate, do not know what to do and what not to do, what is correct and what is wrong, what is worthy and what is not, etc. The weakness, from the historical perspective, is the consequence of modern Chinese history whose knowledge most Chinese people are poor at but reluctant to admit." This book could not be published within China due to its truthfulness. Funny stands for "funny" in this perfect gift for students or anyone who has ever had to struggle through

Annually, China produces more than 5 million college graduates who have been compelled to study English as a foreign language for 10 to 15 years but graduate functionally illiterate, unable to produce comprehensible oral or written English. English is taught as a subject required to pass tests and not as a communicative language. The problems are identified, confirmed by post-graduate students and solutions are presented. The development and success of a remedial program designed for the collegiate level, Holistic English, is well documented by the students at top tier and second tier universities, as well as first tier and vocational colleges in seven Provinces of China. This is a compelling story of a 30 year failed program that reminds us of Albert Einstein's definition of insanity: "Doing the same thing over and over again and expecting a different result." Because this book's main objective is to foster and promote student development, it should appeal to those who advise, counsel, and mentor undergraduate and graduate students, particularly those in psychology, education, and other social sciences. Along with a plethora of stimulating ideas for practice and research, the book contains the results of research having immediate applications to students' educational and career direction needs. Readers will find more than 90 articles in this book distributed across three significant challenges to students' development: the academic, occupational, and personal. Further, the material presented has been organized around three distinct approaches to these challenges: advising, career development, and field placement activities. The source for these articles is the official journal, Teaching of Psychology, of Division Two of the American Psychological Association. The Handbook of Experiential Learning In International Business is a

one-stop source for international managers, business educators and trainers who seek to either select and use an existing experiential learning project, or develop new projects and exercises of this kind. This proceedings book captures a wide range of timely themes for readers to be able to foresee the digital era's impact on English teaching in non-English speaking countries. English, used in the global environment, the frequent mobile communication, and the use of AI-based translators are bringing about dramatic changes in our English language learning and teaching. Who can provide us the wisdom to know what to do? Those scholars going through these colossal environmental changes! A collection of puzzle pieces may bring us a better contour for the future than a perfectly edited book. It's indeed a pleasure reading these insightful pieces to gain wisdom for the future of ELT practices in global contexts. May the Forcing Functions be with You! The Stimulating World of AIED and ITS Research It is my pleasure to write the foreword for Advances in Intelligent Tutoring Systems. This collection, with contributions from leading researchers in the field of artificial intelligence in education (AIED), constitutes an overview of many challenging research problems that must be solved in order to build a truly intelligent tutoring system (ITS). The book not only describes some of the approaches and techniques that have been explored to meet these challenges, but also some of the systems that have actually been built and deployed in this effort. As discussed in the Introduction (Chapter 1), the terms "AIED" and "ITS" are often used interchangeably, and there is a large overlap in the researchers devoted to exploring this common field. In this foreword, I will use the term "AIED" to refer to the research area, and the term "ITS" to refer to the particular kind of system that AIED researchers build. It has often been said that AIED is "AI-complete" in that to produce a tutoring system as sophisticated and effective as a human tutor requires solving the entire gamut of artificial intelligence research (AI) problems. Publisher description Examines why public administration's literature has failed to justify the profession's legitimacy as an instrument of governance Michael Harmon employs the literary conceit of a Final Exam, first "written" in the early 1930s, in a critique of the field's

answers to the legitimacy question. Because the assumptions that underwrite the question preclude the possibility of a coherent answer, the exam should be canceled and its question rewritten. Envisaging a public administration no longer hostage to the legitimacy question, Harmon explains how the study and practice of public administration might proceed from adolescence to maturity. Drawing chiefly from pragmatist philosophy, he argues that despite universal rejection of the "politics/administration" dichotomy on factual grounds, the pseudo-problem of legitimacy nonetheless persists in the guise of four related conceptual dualisms: 1) values and facts, 2) thinking and doing, 3) ends and means, and 4) theory and practice. Collectively, these dualisms demand an impossible answer to the practical question of how we might live, and govern, together in a world of radical uncertainty and interdependence. Only by dissolving them can the legitimacy question (Woodrow Wilson's ghost) finally be banished, clearing away the theoretical debris that obscures a more vital and useful conception of governance.
