Goscinski, 2010-12-17 The primary purpose of this book is to capture the state of the art in Cloud Computing technologies and applications. The book will also aim to identify potential research directions and technologies that will facilitate creation of a global market place of cloud computing services supporting scientific, industrial, business, and consumer applications. We expect the book to serve as a reference for a larger audience such as systems architects, practitioners, developers, new researchers, and graduate level students. This area of research is relatively recent and as such has no existing reference book that addresses it. This book will be a timely contribution to a field that is gaining considerable research interest, momentum, and is expected to be of increasing interest to commercial developers. The book is targeted for professional computer science developers and graduate students, especially at Masters level. As Cloud Computing is recognized as one of the top five emerging technologies that will have a major impact on the quality of science and society over the next 20 years, its knowledge will help position our readers at the forefront of the field.

In the current dynamic environment, a viable tool known as multi-criteria decision analysis (MCDA) is increasingly being adopted to deal with complex business decisions. MCDA is an important decision support tool for analyzing goals and providing optimal solutions and alternatives. It comprises several distinct techniques which are implemented by specialized decision making packages. This book addresses a number of important MCDA methods such as DEMATEL, TOPSIS, AHP, MAUT, and Intuitionistic Fuzzy MCDM which make it possible to derive maximum utility in the area of analytics. As such, it is a valuable resource for researchers and academicians as well as practitioners and business experts.
