The landmark five-book series—all together in one boxed set The Incerto is an investigation of opacity, luck, uncertainty, probability, human error, risk, and decision making when we don't understand the world, expressed in the form of a personal essay with autobiographical sections, stories, parables, and philosophical, historical, and scientific discussions, in non-overlapping volumes that can be accessed in any order. The main thread is that while there is inordinate uncertainty about what is going on, there is great certainty as to what one should do about it. This boxed set includes: FOOLED BY RANDOMNESS THE BLACK SWAN THE BED OF PROCRUSTES ANTIFRAGILE SKIN IN THE GAME Th? Believe it or not, our DNA is almost exactly the same as that of our ancestors. While scientific advances in agriculture, medicine, and technology have protected man, to some degree, from dangers such as starvation, illness, and exposure, the fact remains that our cave-dwelling cousins were considerably healthier than we are. Our paleolithic ancestors did not suffer from heart disease, diabetes, high blood pressure, or obesity. In fact, a good deal of what we view as normal aging is a modern condition that is more akin to disease than any natural state of growing older. Our predecessors were incomparably better nourished than we are, and were incredibly physically fit. And certainly none of them ever craved a doughnut, let alone tasted one. In fact, the human preference for sweet tastes and fatty textures was developed in an environment where such treats were rare, and signaled dense, useful energy. This once-helpful adaptation is the downfall of many a dieter today. It's what makes it hard to resist fats and sweets, especially when they are all around us. We are not living as we were built to live. Our genes were forged in an environment where activity was mandatory—you were active or you starved or were eaten. This created strong selective pressure for genes encoding a smart, physically adept individual capable of very high activity levels. Humans are among the most active of species, and we carry energetically expensive brains to boot. Our energy expenditures rank high among all animals. At least they once did. The New Evolution Diet by Arthur De Vany, PhD is a roadmap back to the better health our ancestors once enjoyed. By eliminating modern foods, including carbohydrates, dairy, and all processed foods from our diets, we can undo much of the damage caused by our modern food environment. The plan is based on three simple principles: 1. Enjoy the pleasure of food and do not count or restrict calories. Eat three satisfying meals a day filled with non-starchy vegetables, fruits, and high-quality, lean proteins 2. Do not starve yourself, but do go hungry episodically, for brief periods, to promote a low fasting blood insulin level and increase metabolic fat-burning. 3. Exercise less, not more, but with more playfulness and intensity. The goal is to create a strong body with a high resting metabolism and a large physiologic capacity to move through life easily—not to burn calories. Kenneth A. Posner spent close to two decades as a Wall Street analyst, tracking the so-called "specialty finance" sector, which included controversial companies such as Countrywide, Fannie Mae, Freddie Mac, CIT, and MasterCard many of which were caught in the subprime mortgage and capital markets crisis of 2007. While extreme volatility is nothing new in finance, the recent downturn caught many off guard, indicating that the traditional approach to decision making had let them down. Introducing a new framework for handling and evaluating extreme risk, Posner draws on years of experience to show how decision makers can best cope with the "Black Swans" of our time. Posner's shrewd assessment combines the classic fundamental research approach of Benjamin Graham and David Dodd with more recent developments in cognitive science, computational theory, and quantitative finance. He outlines a probabilistic approach to decision making that involves forecasting across a range of scenarios, and he explains how to balance confidence, react accurately to fast-breaking information, overcome information overload, zero in on the critical issues, penetrate the information asymmetry shielding corporate executives, and integrate the power of human intuition with sophisticated analytics. Emphasizing the computational resources we already have at our disposal our computers and our minds Posner offers a new track to decision making for analysts, investors, traders, corporate executives, risk managers, regulators, policymakers, journalists, and anyone who faces a world of extreme volatility. One of the primary qualities of good creative thinking is an intellectual freedom to think outside of the box. Good creative thinkers resist orthodox ideas, take new lines of enquiry, and generally come at problems from the kinds of angles almost no one else could. And, what is more, when the ideas of creative thinkers are convincing, they can reshape an entire topic, and change the orthodoxy for good. Nassim Nicholas Taleb's 2007 bestseller The Black Swan: The Impact of the Highly Improbable is precisely such a book: an entertaining, polemical, creative attack on how people in general, and economic experts in particular view the possibility of catastrophic events. Taleb writes with rare creative verve for someone who is also an expert in mathematics, finance, and epistemology (the philosophy of knowledge), and he marries all his skills to turn standard reasoning inside out. His central point is that far from being unimportant, extremely rare events are frequently the most important ones of all: it is highly improbable, but highly consequential occurrences – what he calls Black Swans – that have shaped history most. As a result, Taleb concludes, improbability is not a reason to act as if a possible event does not matter. Rather, it should inspire the opposite reaction. Even leading capitalists admit that capitalism is broken. Green Swans is a manifesto for system change designed to serve people, planet, and prosperity. In his twentieth book, John Elkington—dubbed the “Godfather of Sustainability”—explores new forms of capitalism fit for the twenty-first century. If Nassim Nicholas Taleb's “Black Swans” are problems that can take us exponentially toward breakdown, then “Green Swans” are solutions that take us exponentially toward breakthrough. The success—and survival—of humanity now depends on how we rein in the first and accelerate the second. Green Swans draws on Elkington's firsthand experience in some of the world's best-known boardrooms and C-suites. Using case studies, real-world examples, and profiles on emergent technologies, Elkington shows how the weirdest “Ugly Ducklings” of today's world may turn into tomorrow's world-saving Green Swans. This book is a must-read for business leaders in corporations great and small who want to help their businesses survive the coming shift in global priorities over the next decade and expand their horizons from responsibility, through resilience, and onto regeneration. Can a renowned mathematician successfully outwit the stock market? Not when his biggest investment is WorldCom. In A Mathematician Plays the Stock Market , best-selling author John Allen Paulos employs his trademark stories, vignettes, paradoxes, and puzzles to address every thinking reader's curiosity about the market -- Is it efficient? Is it random? Is there anything to technical analysis, fundamental analysis, and other supposedly time-tested methods of picking stocks? How can one quantify risk? What are the most common scams? Are there any approaches to investing that truly outperform the major indexes? But Paulos's tour through the irrational exuberance of market mathematics doesn't end there. An unrequited (and financially disastrous) love affair with WorldCom leads Paulos to question some cherished ideas of personal finance. He explains why "data mining" is a self-fulfilling belief, why "momentum investing" is nothing more than herd behavior with a lot of mathematical jargon added, why the ever-popular Elliot Wave Theory cannot be correct, and why you should take Warren Buffet's "fundamental analysis" with a grain of salt. Like Burton Malkiel's A Random Walk Down Wall Street , this clever and illuminating book is for anyone, investor or not, who follows the markets -- or knows someone who does. Visionary designer and technologist John Maeda defines the fundamental laws of how computers think, and why you should care even if you aren't a programmer. "Maeda is to design what Warren Buffett is to finance." --Wired John Maeda is one of the world's preeminent interdisciplinary thinkers on technology and design. In How to Speak Machine, he offers a set of simple laws that govern not only the computers of today, but the unimaginable machines of the future. Technology is already more powerful than we can comprehend, and getting more powerful at an exponential pace. Once set in motion, algorithms never tire. And when a program's size, speed, and tirelessness combine with its ability to learn and transform itself, the outcome can be unpredictable and dangerous. Take the seemingly instant transformation of Microsoft's chatbot Tay into a hate-spewing racist, or how crime-predicting algorithms reinforce racial bias. How to Speak Machine provides a coherent framework for today's product designers, business leaders, and policymakers to grasp this brave new world. Drawing on his wide-ranging experience from engineering to computer science to design, Maeda shows how businesses and individuals can identify opportunities afforded by technology to make world-changing and inclusive products--while avoiding the pitfalls inherent to the medium. Summary of The Black Swan By Nassim Nicholas Taleb - The Impact of the Highly Improbable SYNOPSIS: Th? Europeans once thought all swans were white, and white' was part of how they defined 'swan.' Then black swans were discovered, and the definition changed forever. In his 2007 book, Nicholas Taleb says the black swans of his title can appear at any time, in the form of financial crises, wars, and other unexpected events that have profound, irreversible consequences. He draws on philosophy, mathematics and economics to explain why we seldom prepare for these events adequately. The way our brains process knowledge, combined with the conventions of statistical modeling, lull us into believing the future will resemble the past. We must beware of, and be prepared for, the unexpected. Book jacket. Fooled by Randomness is a standalone book in Nassim Nicholas Taleb's landmark Incerto series, an investigation of opacity, luck, uncertainty, probability, human error, risk, and decision-making in a world we don't understand. The other books in the series are The Black Swan, Antifragile, Skin in the Game, and The Bed of Procrustes. Fooled by Randomness is the word-of-mouth sensation that will change the way you think about business and the world. Nassim Nicholas Taleb—veteran trader, renowned risk expert, polymathic scholar, erudite raconteur, and New York Times bestselling author of The Black Swan—has written a modern classic that turns on its head what we believe about luck and skill. This book is about luck—or more precisely, about how we perceive and deal with luck in life and business. Set against the backdrop of the most conspicuous forum in which luck is mistaken for skill—the world of trading—Fooled by Randomness provides captivating insight into one of the least understood factors in all our lives. Writing in an entertaining narrative style, the author tackles major intellectual issues related to the underestimation of the influence of happenstance on our lives. The book is populated with an array of characters, some of whom have grasped, in their own way, the significance of chance: the baseball legend Yogi Berra; the philosopher of knowledge Karl Popper; the ancient world's wisest man, Solon; the modern financier George Soros; and the Greek voyager Odysseus. We also meet the fictional Nero, who seems to understand the role of randomness in his professional life but falls victim to his own superstitious foolishness. However, the most recognizable character of all remains unnamed—the lucky fool who happens to be in the right place at the right time—he embodies the “survival of the least fit.” Such individuals attract devoted followers who believe in their guru's insights and methods. But no one can replicate what is obtained by chance. Are we capable of distinguishing the fortunate charlatan from the genuine visionary? Must we always try to uncover nonexistent messages in random events? It may be impossible to guard ourselves against the vagaries of the goddess Fortuna, but after reading Fooled by Randomness we can be a little better prepared. Named by Fortune One of the Smartest Books of All Time A Financial Times Best Business Book of the Year The most influential book of the past seventy-five years: a groundbreaking exploration of everything we know about what we don't know, now with a new section called “On Robustness and Fragility.” A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random, and more predictable, than it was. The astonishing success of Google was a black swan; so was 9/11. For Nassim Nicholas Taleb, black swans underlie almost everything about our world, from the rise of religions to events in our own personal lives. Why do we not acknowledge the phenomenon of black swans until after they occur? Part of the answer, according to Taleb, is that humans are hardwired to learn specifics when they should be focused on generalities. We concentrate on things we already know and time and time again fail to take into consideration what we don't know. We are, therefore, unable to truly estimate opportunities, too vulnerable to the impulse to simplify, narrate, and categorize, and not open enough to rewarding those who can imagine the “impossible.” For years, Taleb has studied how we fool ourselves into thinking we know more than we actually do. We restrict our thinking to the irrelevant and inconsequential, while large events continue to surprise us and shape our world. In this revelatory book, Taleb will change the way you look at the world, and this second edition features a new philosophical and empirical essay, “On Robustness and Fragility,” which offers tools to navigate and exploit a Black Swan world. Taleb is a vastly entertaining writer, with wit, irreverence, and unusual stories to tell. He has a polymathic command of subjects ranging from cognitive science to business to probability theory. Elegant, startling, and universal in its applications, The Black Swan is a landmark book—itsself a black swan. In this profound and playful book, Nassim Nicholas Taleb presents his ideas about life in the form of aphorisms, the world's earliest - and most memorable - literary form. Procrustes was a character from Greek mythology who abducted travellers and invited them to spend the night in a special bed, which they had to fit to perfection. They never did. Those who were too tall had their legs chopped off; those who were too short were stretched. Every aphorism here is about a Procrustean bed of sorts - we humans, facing the limits of our knowledge, the unseen and the unknown, resolve the tension by squeezing life and the world into crisp commoditized ideas, reductive categories, specific vocabularies and pre-packaged narratives. Only by embracing the unexpected - and accepting what we don't know - can we see the world as it really is. Life at the Center of the Energy Crisis: A Technologist's Search for a Black Swan describes the story of the author's work and struggles in the field of energy research. The author's experience in the field spans from work with Admiral Rickover and the Nuclear Navy to research with NASA designing propulsion for spacecraft to travel to Mars. The book provides insights into the differences between nuclear research done during the Cold War by the two superpowers, and offers a commentary on the flaws in each system with hope for change in the future. The book also provides a look into the development of the nuclear engineering program at the University of Illinois from the author's years as a professor and an administrator. I've loved him as long as I can remember. The gangly boy with big brown eyes and unruly hair who grew up into an intoxicating man. He wears scruff like he invented it and ambles with a swagger that makes panties drop. Killian Shepard. Shep. We grew up together. We played Ghost in the Graveyard. Had our own rock band. It didn't matter that he was five years older than me. It didn't matter that he looked at me as a kid sister even as I grew into woman. It didn't even matter when

he left me behind to go to college and start his adult life. He'd be back. He was always meant to be mine. He came back, all right. But instead of smelling of promises, he stunk of betrayal. And he destroyed me—the day he married my sister instead of me. So I did the only thing a girl like me in my position could do. I got my revenge. I married his brother, Kael. Now we're one big happy f\*\*king family. The landmark five-book series—all together in one ebook bundle **The Incerto** is an investigation of opacity, luck, uncertainty, probability, human error, risk, and decision making when we don't understand the world, expressed in the form of a personal essay with autobiographical sections, stories, parables, and philosophical, historical, and scientific discussions, in non-overlapping volumes that can be accessed in any order. The main thread is that while there is inordinate uncertainty about what is going on, there is great certainty as to what one should do about it. This ebook bundle includes: **FOOLED BY RANDOMNESS THE BLACK SWAN THE BED OF PROCRUSTES ANTIFRAGILE SKIN IN THE GAME** An essential introduction to the life, writings, and legacy of one of Japan's most prolific Buddhist masters. The founder of the Soto school of Zen in Japan, Eihei Dogen (1200–1253) is one of the most influential Buddhist teachers of all time. Although Dogen's writings have reached wide prominence among contemporary Buddhists and philosophers, there is much that remains enigmatic about his life and writings. In Dogen: Japan's Original Zen Teacher, respected Dogen scholar and translator Steven Heine offers a nuanced portrait of the master's historical context, life, and work, paying special attention to issues such as: The nature of the "great doubt" that motivated Dogen's religious quest The sociopolitical turmoil of Kamakura Japan that led to dynamic innovations in medieval Japanese Buddhism The challenges and transformations Dogen experienced during his pivotal time in China Key inflection points and unresolved questions regarding Dogen's teaching career in Japan Ongoing controversies in the scholarly interpretations of Dogen's biography and teachings Synthesizing a lifetime of research and reflection into an accessible narrative, this new addition to the Lives of the Masters series illuminates thought-provoking perspectives on Dogen's character and teachings, as well as his relevance to contemporary practitioners. Nassim Nicholas Taleb's landmark Incerto series is an investigation of luck, uncertainty, probability, opacity, human error, risk, disorder, and decision-making in a world we don't understand, in nonoverlapping and standalone books. All four volumes--Antifragile, The Black Swan, Fooled by Randomness, and the expanded edition of The Bed of Procrustes, updated with more than 50 percent new material--are now together in one boxed set. **ANTIFRAGILE** "Startling . . . richly crammed with insights, stories, fine phrases and intriguing asides."--The Wall Street Journal Just as human bones get stronger when subjected to stress and tension, many things in life benefit from disorder, volatility, and turmoil. What Taleb has identified and calls "antifragile" is that category of things that not only gain from chaos but need it in order to survive and flourish. The resilient resists shocks and stays the same; the antifragile gets better and better. What is crucial is that the antifragile loves errors, as it incurs small harm and large benefits from them. Spanning politics, urban planning, war, personal finance, economic systems, and medicine in an interdisciplinary and erudite style, Antifragile is a blueprint for living in a Black Swan world. **THE BLACK SWAN** "[A book] that altered modern thinking."--The Times (London) A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random and more predictable. The astonishing success of Google was a black swan; so was 9/11. In this groundbreaking and prophetic book, Taleb shows that black swan events underlie almost everything about our world, from the rise of religions to events in our own personal lives, and yet we--especially the experts--are blind to them. **FOOLED BY RANDOMNESS** "[Fooled by Randomness] is to conventional Wall Street wisdom approximately what Martin Luther's ninety-five theses were to the Catholic Church."--Malcolm Gladwell, The New Yorker Are we capable of distinguishing the fortunate charlatan from the genuine visionary? Must we always try to uncover nonexistent messages in random events? Fooled by Randomness is about luck: more precisely, about how we perceive luck in our personal and professional experiences. Set against the backdrop of the most conspicuous forum in which luck is mistaken for skill--the markets--Fooled by Randomness is an irreverent, eye-opening, and endlessly entertaining exploration of one of the least understood forces in our lives. **THE BED OF PROCRUSTES** "Taleb's crystalline nuggets of thought stand alone like esoteric poems."--Financial Times This collection of aphorisms and meditations expresses Taleb's major ideas in ways you least expect. The Bed of Procrustes takes its title from Greek mythology: the story of a man who made his visitors fit his bed to perfection by either stretching them or cutting their limbs. With a rare combination of pointed wit and potent wisdom, Taleb plows through human illusions, contrasting the classical views of courage, elegance, and erudition against the modern diseases of nerdiness, philistinism, and phoniness. The 2018 updated edition from authors Larry Swedroe and Kevin Grogan. From Larry Swedroe, author of the bestselling series of "The Only Guide" investment books, and Kevin Grogan, co-author of "The Only Guide You'll Ever Need for the Right Financial Plan," comes the 2018 edition of "Reducing the Risk of Black Swans." Designed for professional financial advisors and educated investors alike, Swedroe and Grogan wrote this book especially for those looking to expand their technical knowledge of the evidence-based investing world. "Swans" provides an in-depth look at portfolio construction and offers a roadmap for those interested in refining their portfolio. From CAPM to the three-factor model, Swedroe and Grogan present some of the academic underpinnings that have led to what we now commonly recognize to be modern financial theory. Taking it one step further, they provide specifics on what it takes to build a more efficient portfolio, in particular using new alternative investments. Based on an overwhelming amount of hard data and research, Swedroe and Grogan make their case for reducing the risk of black swans. "Babitz's talent for the brilliant line, honed to a point, never interferes with her feel for languid pleasures." --The New York Times Book Review A new reissue of Babitz's collection of nine stories that look back on the 1980s and early 1990s--decades of dreams, drink, and glimpses of a changing world. Black Swans further celebrates the phenomenon of Eve Babitz, cementing her reputation as the voice of a generation. With an introduction by Stephanie Danler, bestselling author of Sweetbitter. "On the page, Babitz is pure pleasure—a perpetual-motion machine of no-stakes elation and champagne fizz." --The New Yorker A comprehensive value investing framework for the individual investor In a straightforward and accessible manner, The Dhandho Investor lays out the powerful framework of value investing. Written with the intelligent individual investor in mind, this comprehensive guide distills the Dhandho capital allocation framework of the business savvy Patels from India and presents how they can be applied successfully to the stock market. The Dhandho method expands on the groundbreaking principles of value investing expounded by Benjamin Graham, Warren Buffett, and Charlie Munger. Readers will be introduced to important value investing concepts such as "Heads, I win! Tails, I don't lose that much!," "Few Bets, Big Bets, Infrequent Bets," Abhimanyu's dilemma, and a detailed treatise on using the Kelly Formula to invest in undervalued stocks. Using a light, entertaining style, Pabrai lays out the Dhandho framework in an easy-to-use format. Any investor who adopts the framework is bound to improve on results and soundly beat the markets and most professionals. The most influential book of the past seventy-five years: a groundbreaking exploration of everything we know about what we don't know, now with a new section called "On Robustness and Fragility." A black swan is a highly improbable event with three principal characteristics: It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random, and more predictable, than it was. The astonishing success of Google was a black swan; so was 9/11. For Nassim Nicholas Taleb, black swans underlie almost everything about our world, from the rise of religions to events in our own personal lives. Why do we not acknowledge the phenomenon of black swans until after they occur? Part of the answer, according to Taleb, is that humans are hardwired to learn specifics when they should be focused on generalities. We concentrate on things we already know and time and time again fail to take into consideration what we don't know. We are, therefore, unable to truly estimate opportunities, too vulnerable to the impulse to simplify, narrate, and categorize, and not open enough to rewarding those who can imagine the "impossible." For years, Taleb has studied how we fool ourselves into thinking we know more than we actually do. We restrict our thinking to the irrelevant and inconsequential, while large events continue to surprise us and shape our world. In this revelatory book, Taleb will change the way you look at the world, and this second edition features a new philosophical and empirical essay, "On Robustness and Fragility," which offers tools to navigate and exploit a Black Swan world. Taleb is a vastly entertaining writer, with wit, irreverence, and unusual stories to tell. He has a polymathic command of subjects ranging from cognitive science to business to probability theory. Elegant, startling, and universal in its applications, The Black Swan is a landmark book—itsself a black swan. The pioneering book of the Consilient School. A mix of essay and commentary, seeds of her work can be found in Milan Kundera and Gregory Bateson. This book is a Black Swan. Turns a critical eye on Aesop's Fables to ask whether there is any scientific truth to Aesop's portrayal of his animals. Despite originating more than two-and-a-half thousand years ago, Aesop's Fables are still passed on from parent to child, and are embedded in our collective consciousness. The morals we have learned from these tales continue to inform our judgements, but have the stories also informed how we regard their animal protagonists? If so, is there any truth behind the stereotypes? Are wolves deceptive villains? Are crows insightful geniuses? And could a tortoise really beat a hare in a race? In Aesop's Animals, zoologist Jo Wimpenny turns a critical eye to the fables to discover whether there is any scientific truth to Aesop's portrayal of the animal kingdom. She brings the tales into the twenty-first century, introducing the latest findings on some of the most fascinating branches of ethological research – the study of why animals do the things they do. In each chapter she interrogates a classic fable and a different topic – future planning, tool use, self-recognition, cooperation and deception – concluding with a verdict on the veracity of each fable's portrayal from a scientific perspective. By sifting fact from fiction in one of the most beloved texts of our culture, Aesop's Animals explores and challenges our preconceived notions about animals, the way they behave, and the roles we both play in our shared world. To Jung, synchronicity is a meaningful coincidence in time, a psychic factor which is independent of space and time. This revolutionary concept of synchronicity both challenges and complements the physicist's classical view of causality. It also forces us to a basic reconsideration of the meaning of chance, probability, coincidence and the singular events in our lives. \* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. By reading this summary, you will discover a new way of understanding uncertainty through the concept of the Black Swan. You will also discover : that the Black Swan is a surprising, unpredictable event with far-reaching consequences; why you fail to make predictions; that you are wrong to trust those you consider to be experts in their field; that you can take advantage of uncertainty. The world is made of uncertainties, but man continues to seek to understand and predict it. The more informed society is, the more expert it thinks it is and the more capable it is of understanding the world. However, when it discovers that not all swans are white, its very notion of knowledge is turned upside down. This event, which was very unlikely and with strong consequences, is called by Nassim Nicholas Taleb the "Black Swan". It can lead to success or failure and can make history. How can you approach this phenomenon and take advantage of it in your personal life? \*Buy now the summary of this book for the modest price of a cup of coffee! Nassim Nicholas Taleb's landmark Incerto series is an investigation of luck, uncertainty, probability, opacity, human error, risk, disorder, and decision-making in a world we don't understand, in nonoverlapping and standalone books. All four volumes—Antifragile, The Black Swan, Fooled by Randomness, and the expanded edition of The Bed of Procrustes, updated with more than 50 percent new material—are now together in one ebook bundle. **ANTIFRAGILE** "Startling . . . richly crammed with insights, stories, fine phrases and intriguing asides."--The Wall Street Journal Just as human bones get stronger when subjected to stress and tension, many things in life benefit from disorder, volatility, and turmoil. With a rare combination of pointed wit and potent wisdom, Taleb plows through human illusions, contrasting the classical views of courage, elegance, and erudition against the modern diseases of nerdiness, philistinism, and phoniness. Alex Oliver and Timothy Smiley provide a new account of plural logic. They argue that there is such a thing as genuinely plural denotation in logic, and expound a framework of ideas that includes the distinction between distributive and collective predicates, the theory of plural descriptions, multivalued functions, and lists. Mixing myth, entropy, and Angry Birds, Randall Schweller brings a novel perspective to international studies. Just what exactly will follow the American century? This is the question Randall L. Schweller explores in his provocative assessment of international politics in the twenty-first century. Schweller considers the future of world politics, correlating our reliance on technology and our multitasking, distracted, disorganized lives with a fragmenting world order. He combines the Greek myth of the Golden Apple of Discord, which explains the start of the Trojan War, with a look at the second law of thermodynamics, or entropy. "In the coming age," Schweller writes, "disorder will reign supreme as the world succumbs to . . . entropy, an irreversible process of disorganization that governs the direction of all physical changes taking place in the universe." Interweaving his theory of global disorder with issues on the world stage—coupled with a disquisition on board games and the cell phone app "Angry Birds"—Schweller's thesis yields astonishing insights. Maxwell's Demon and the Golden Apple will appeal to leaders of multinational corporations and government programs as well as instructors of undergraduate courses in international relations. Creative, shocking, and constantly intriguing, Black Swan Impact is a taut geopolitical novel that features a bold but grim vision of a post-World War III future. The thrilling storyline never meanders, instead moving forward with purpose and keeping the reader in eager pursuit of it. Readers will enjoy this captivating, insightful, and detailed crisis that could only be created by an insider with many years of expertise in the subject matter. A former government employee of the Department of Homeland Security, Helen Hynson Vettori delivers a credible and horrifying tale born from her consternation regarding the United States government's suboptimal response to SARS CoV-2. Appalled that previous years of planning and preparation for biological incidents, to include pandemics, were overlooked, she wrote this sci-fi political thriller. As a result, readers will find unnerving truths woven throughout this terrifying fiction. Further, with her background as a Senior Medical Intelligence Analyst and paramedic, she provides graphic descriptions with visceral details that compel readers to turn each page with chilling captivation. Critically acclaimed science journalist, Mark Buchanan tells the fascinating story of the discovery that there is a natural structure of instability woven into the fabric of our world, which explains why catastrophes-- both natural and human-- happen. Scientists have recently discovered a new law of nature and its footprints are virtually everywhere-- in the spread of forest fires, mass extinctions, traffic jams, earthquakes, stock-market fluctuations, the rise and fall of nations, and even trends in fashion, music and art. Wherever we look, the world is modelled on a simple template: like a steep pile of sand, it is poised on the brink of instability, with avalanches-- in events, ideas or whatever-- following a universal pattern of change. This remarkable discovery heralds what Mark Buchanan calls the new science of 'ubiquity', a science whose secret lies in the stuff of the everyday world. Combining literary flair with scientific rigour, this enthralling book documents the coming revolution by telling the story of the researchers' exploration of the law, their ingenious work and unexpected insights. Buchanan reveals that we are witnessing the emergence of an extraordinarily powerful new field of science that will help us comprehend the bewildering and unruly rhythms that dominate our lives and may even lead to a true science of the dynamics of human culture and history. Jim Paul's meteoric rise took him from a small town in Northern Kentucky to governor of the Chicago Mercantile Exchange, yet he lost it all--his fortune, his reputation, and his job--in one fatal attack of excessive economic hubris. In this honest, frank analysis, Paul and Brendan Moynihan revisit the events that led to Paul's disastrous decision and examine the psychological factors behind bad financial practices in several economic sectors. This book--winner of a 2014 Axiom Business Book award gold medal--begins with the unbroken string of successes that helped Paul achieve a jet-setting lifestyle and land a key spot with the Chicago Mercantile Exchange. It then describes the circumstances leading up to Paul's \$1.6 million loss and the essential lessons he learned from it--primarily that, although there are as many ways to make money in the markets as there are people participating in them, all losses come from the

same few sources. Investors lose money in the markets either because of errors in their analysis or because of psychological barriers preventing the application of analysis. While all analytical methods have some validity and make allowances for instances in which they do not work, psychological factors can keep an investor in a losing position, causing him to abandon one method for another in order to rationalize the decisions already made. Paul and Moynihan's cautionary tale includes strategies for avoiding loss tied to a simple framework for understanding, accepting, and dodging the dangers of investing, trading, and speculating. In the author's point of view, a black swan is an improbable event with three principal characteristics - It is unpredictable; it carries a massive impact; and, after the fact, we concoct an explanation that makes it appear less random, and more predictable, than it was. Why do we not acknowledge the phenomenon of black swans until after they occur? Part of the answer, according to Taleb, is that humans are hardwired to learn specifics when they should be focused on generalities. We concentrate on things we already know and time and time again fail to take into consideration what we don't know. We are, therefore, unable to truly estimate opportunities, too vulnerable to the impulse to simplify, narrate, and categorize, and not open enough to rewarding those who can imagine the 'impossible'. The Black Swan by Nassim Nicholas Taleb | Key Takeaways, Analysis & Review Preview: The Black Swan by Nassim Nicholas Taleb is a philosophical treatment of Taleb's research on highly improbable, high-impact events. These events, which Taleb calls "Black Swans," are so improbable that they are unpredictable. However, pundits and scholars are often inclined to fit such extreme events into a causal narrative after the fact, in order to make history appear more organized... PLEASE NOTE: This is key takeaways and analysis of the book and NOT the original book. Inside this Instead of The Black Swan: Overview of the book Important People Key Takeaways Analysis of Key Takeaways Soul in the Game is a book of inspiring stories and hard-won lessons on how to live a meaningful life, crafted by investor and writer Vitaliy Katsenelson. Drawing from the lives of classical composers, ancient Stoics, and contemporary thinkers, Katsenelson weaves together a tapestry of practical wisdom that has helped him overcome his greatest challenges: in work, family, identity, health—and in dealing with success, failure, and more. Part autobiography, part philosophy, part creativity manual, Soul in the Game is a unique and vulnerable exploration of what works, and what doesn't, in the attempt to shape a fulfilling and happy life. The #1 English-language bestseller in China--the book that is shaping China's planning and policy for the future. A "gray rhino" is a highly probable, high impact yet neglected threat: kin to both the elephant in the room and the improbable and unforeseeable black swan. Gray rhinos are not random surprises, but occur after a series of warnings and visible evidence. The bursting of the housing bubble in 2008, the devastating aftermath of Hurricane Katrina and other natural disasters, the new digital technologies that upended the media world, the fall of the Soviet Union...all were evident well in advance. Why do leaders and decision makers keep failing to address obvious dangers before they spiral out of control? Drawing on her extensive background in policy formation and crisis management, as well as in-depth interviews with leaders from around the world, Michele Wucker shows in The Gray Rhino how to recognize and strategically counter looming high impact threats. Filled with persuasive stories, real-world examples, and practical advice, The Gray Rhino is essential reading for managers, investors, planners, policy makers, and anyone who wants to understand how to profit by avoiding getting trampled. Pulling together into a single framework the two separate disciplines of strategy management and risk management, this book provides a practical guide for organizations to shape and execute sustainable strategies with full understanding of how much risk they are willing to accept in pursuit of strategic goals.
