Based on over 30 years of successful teaching experience in this
course, Robert Pagano's introductory text takes an intuitive, concepts-
based approach to descriptive and inferential statistics. He uses the
sign test to introduce inferential statistics, empirically derived
sampling distributions, many visual aids, and lots of interesting
examples to promote student understanding. One of the hallmarks of
this text is the positive feedback from students - even students who are
not mathematically inclined praise the text for its clarity, detailed
presentation, and use of humor to help make concepts accessible and
memorable. Thorough explanations precede the introduction of every
formula, and the exercises that immediately follow include a step-by-
step model that lets students compare their work against fully solved
examples. This combination makes the text perfect for students taking
their first statistics course in psychology or other social and behavioral
sciences.

Interpreting Basic Statistics Feb 28 2024 Interpreting Basic Statistics gives students valuable practice in interpreting statistical reporting as it actually appears in peer-reviewed journals. New to the eighth edition: A broader array of basic statistical concepts is covered, especially to better reflect the New Statistics. Journal excerpts have been updated to reflect current styles in statistical reporting. A stronger emphasis on data visualizations has been added. The statistical exercises have been re-organized into units to facilitate ease of use and understanding. About this book Each of the 64 exercises gives a brief excerpt of statistical reporting from a published research article, and begins with guidelines for interpreting the statistics in the excerpt. The questions on the excerpts promote learning by requiring students to interpret information in tables and figures, perform simple calculations to further their interpretations, critique data-reporting techniques, and evaluate procedures used to collect data. Each exercise covers a limited number of statistics, making it easy to coordinate the exercises with lectures and a main textbook. The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show that interpreting statistics is more than a mathematical exercise. These questions require students to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations.
