Observations with X-ray satellite ROSAT over the past 5 years have established supersoft X-ray sources as a new class of objects in our Galaxy and beyond. Optical follow-up observations have revealed the binary nature of several of them. Recent population synthesis calculations have shown that the number of such binaries is

expected to be considerably larger than those of the common low- and high-mass X-ray binaries. This book provides the first comprehensive overview of the many recent observational discoveries and theoretical investigations. It describes relations between supersoft sources and other areas in astrophysics. This volume also comprises a complete catalog of presently known supersoft sources including a comprehensive bibliography of observational results. Edited by two of the world's leading analysts of post-communist politics, this book brings together distinguished specialists on the Baltic states (Estonia, Latvia and Lithuania), Poland, the Czech Republic, Slovakia and Hungary. The authors analyse the patterns of post-communist democratization in these countries, paying particular attention to the process of party formation, electoral politics, the growth of civil society, and the impact of economic reform on the

emergence of interest groups. Karen Dawisha and Bruce Parrott provide theoretical and comparative chapters on post-communist political development across the region. This book will provide students and scholars with detailed analysis by leading authorities, plus the latest research data on recent political and economic developments in each country. This book covers all aspects of diagnostic and therapeutic bronchoscopy, which go beyond the techniques of inspection, simple lavage and biopsies of the tracheobronchial tree. In a first section, historical aspects as well as the modern use of both rigid and flexible instruments, the set-up of a bronchoscopy unit, anaesthetic techniques, and functional evaluation for patients undergoing interventional bronchoscopy are discussed. A diagnostic section on transbronchial needle aspiration and bronchoscopic ultrasound is followed by extensive coverage of all existing therapeutic techniques: foreign body removal, laser resection, electrocautery, argon plasma coagulation, cryotherapy, brachytherapy, photodynamic therapy, stenting, and a

chapter on multi-modality treatment of advanced pulmonary malignancies. A fourth section deals with percutaneous image-guided procedures, percutaneous dilatational tracheostomy, and transtracheal oxygen therapy. The last section provides an in-depth look at emerging bronchoscopic technology, such as autofluorescence, virtual bronchoscopy, and gene therapy. Written by the world's leading authorities in the field and beautifully illustrated, this book presents the state of the art of interventional bronchoscopy. It is recommended reading for pulmonologists, thoracic or ENT surgeons, oncologists and physicians who take an interest in bronchoscopy. A follow-up edition on the grammar of the 20th and 21st Dynasty of Egypt. In it considerations of meaning and grammar cannot be kept separate because it is a dead language in which the written script does not indicate vowels. The first stage was to understand the meaning of the written records. This work has

This book provides a unique insight into the institution building process and constitutional politics in new democracies of Eastern Europe. For the first time, an in-depth empirical analysis of thirteen individual post-communist countries is provided within a sound comparative and theoretical context. Rita Carter brings to light this new and vital understanding of personality. Rita explains that inside every individual is a team of personalities, working together to give the impression of one unified self. A manual for amateur radio enthusiasts discusses the history of packet radio, hardware systems, networking, setting up an amateur packet radio station, and equipment and accessories. This fascinating book provides a stimulating introduction to analog electronics by analysing the design and construction of a radio transceiver. Essential theoretical background is given

along with carefully designed laboratory and homework exercises. The author begins with a thorough description of basic electronic components and simple circuits and goes on to describe the key elements of radio electronics, including filters, amplifiers, oscillators, mixers, and antennas.

Laboratory exercises lead the reader through the design, construction, and testing of a popular radio transceiver (the NorCal 40A). A diskette containing the widely known circuit simulation software, Puff, is included in the book. This was the first book to deal with elementary electronics in the context of radio. It can be used as a textbook for introductory analog electronics courses, for more advanced undergraduate classes on radio-frequency electronics, and will also be of great interest to electronics hobbyists and radio enthusiasts. "Electronic Principles, eighth edition, continues its tradition as a clearly explained, in-depth introduction to electronic

semiconductor devices and circuits. This textbook is intended for students who are taking their first course in linear electronics. The prerequisites are a dc/ac circuits course, algebra, and some trigonometry. Electronic Principles provides essential understanding of semiconductor device characteristics, testing, and the practical circuits in which they are found. The text provides clearly explained concepts-- written in an easy-to-read conversational style-- establishing the foundation needed to understand the operation and troubleshooting of electronic systems. Practical circuit examples, applications, and troubleshooting exercises are found throughout the chapters"-- "Parking Generation Manual, 5th Edition is a publication of the Institute of Transportation Engineers (ITE). Parking Generation Manual is an educational tool for planners, transportation professionals, zoning boards, and others who are interested in estimating parking demand

of a proposed development. Parking Generation Manual includes a complete set of searchable electronic files including land use descriptions and data plots for all available combinations of land uses, time periods, independent variables, and settings. Data contained in Parking Generation Manual are presented for informational purposes only and do not include ITE recommendations on the best course of action or the preferred application of the data. The information is based on parking generation studies submitted voluntarily to ITE by public agencies, developers, consulting firms, student chapters, and associations."-- Provided by publisher. An intuitive, ingenious and powerful technique, sentinel lymph node biopsy has entered clinical practice with astonishing rapidity and now represents a new standard of care for melanoma and breast cancer patients, while showing great promise for the treatment of urologic, colorectal, gynecologic, and head and neck cancers. This

text, written by international experts in the technique, provides a clear and comprehensive guide, presenting a detailed overview and discussing the various mapping techniques available and how these are applied in a number of leading institutions. This essential resource for surgical oncologists, pathologists, and specialists in nuclear medicine will also provide key information for those planning to start a sentinel lymph node program. Designed for use in courses such as electronic devices or electronic circuits, this text features a new chapter on communication circuits, as well as performance objectives for each chapter. New material provides a stronger theoretical understanding of electronics. In addition, special sections called T-shooters, designed to strengthen students' troubleshooting skills, are included throughout the text. The content of the work has also been updated to keep coverage in step with the fast-changing world of electronics. Discover

(or rediscover) the fun and magic of building electronic circuits with thyratrons (vacuum tubes). This book has everything you need to know about the art and science of thyratron design and construction. It pulls together, in one easy to read book, thyratron types and characteristics, thyratron homebrew techniques, and how to design audio and RF triode and pentode circuits. The book is written primarily for radio amateurs (or audio equipment builders) that already understands basic electronics but have forgotten or never had the pleasure of working with hollow-state devices. The Second Edition includes over 50+ pages of new and revised material including a new chapter on thyratron oscillator design. Friedrich Junge's pioneering introduction to the grammar of Late Egyptian, the language of the New Kingdom, fills a longstanding gap in teaching works for Ancient Egyptian. The English translation of the second German edition makes

the work available to a wide audience. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. Newest in the famous series of gay erotic comics and cartoons, including work by Gerard Donelan, Zack, Farrady, John Blackburn and others. With enticing drawings of muscle-bound men accompanying stories of raw and unexpected desire, as well as many humorous strips and

panels, this volume of 'Meatmen' has it all. A companion to his now-classic Acting-In (Springer, 1996), Foundations of Psychodrama presents a framework for integrating psychodrama with other methods of practice. The third edition, developed from a 1985 monograph, had wide appeal to students and practitioners of psychodrama as well as functioning as a fresh stimulus to psychotherapy, education, pastoral counseling, and other helping roles. This fourth edition takes account of the increasing work in the field in the 12 years since the last edition and includes a good deal of new material designed to present a more specific rationale for the use of psychodramatic methods while constructing a more logical sequence of events. Dr. Blatner has made a great book even better. Please visit our Author's Website for more information."
