

SPECIAL SENSES

The body's sensory receptors react to stimuli or changes occurring both within the body and in the external environment. When triggered, these receptors send nerve impulses along afferent pathways to the brain for interpretation, thus allowing the body to assess and adjust to changing conditions so that homeostasis may be maintained.

The minute receptors of general sensation that react to touch—pressure, pain, temperature changes, and muscle tension—are widely distributed in the body. These are considered in Chapter 7. In contrast, receptors of the special senses—sight, hearing, equilibrium, smell, and taste—tend to be localized and in many cases are quite complex. The structure and function of the special sense organs are the subjects of the student activities in this chapter.

THE EYE AND VISION

1. Complete the following statements by inserting your responses in the answer blanks.

extrinsic (external eye) 1

eyelids 2

Meibomian glands 3

Conjunctivitis 4

Attached to the eyes are the (1) muscles that allow us to direct our eyes toward a moving object. The anterior aspect of each eye is protected by the (2), which have eyelashes projecting from their edges. Closely associated with the lashes are oil-secreting glands called (3) that help to lubricate the eyes. Inflammation of the mucosa lining the eyelids and covering the anterior part of the eyeball is called (4).

2. Trace the pathway that the secretion of the lacrimal glands takes from the surface of the eye by assigning a number to each structure. (Note that #1 will be closest to the lacrimal gland.)

2 1. Lacrimal sac

4 2. Nasal cavity

3 3. Nasolacrimal duct

1 4. Lacrimal canals

Flavor Perception Andrew J. Taylor,Deborah D. Roberts,2008-04-15 Unlike other human senses the exact mechanisms that lead to our perception of flavor have not yet been elucidated It is recognised that the process involves a wide range of stimuli which are thought likely to interact in a complex way but since the chemical compounds and physical structures that activate the flavor sensors change as the food is eaten measurements of the changes in stimuli with time are essential to an understanding of the relationship between stimuli and perception It is clear that we need to consider the whole process the release of flavor chemicals in the mouth the transport processes to the receptors the specificity and characteristics of the receptors the transduction mechanisms and the subsequent processing of signals locally and at higher centres in the brain This book provides a state of the art review of our current understanding of the key stages of flavor perception for those working in the flavor field whether in the academic or industrial sector In particular it is directed at food scientists and technologists ingredients suppliers and sensory scientists

Sensory Linguistics Bodo Winter,2019-04-24 One of the most fundamental capacities of language is the ability to express what speakers see hear feel taste and smell Sensory Linguistics is the interdisciplinary study of how language relates to the senses This book deals with such foundational questions as Which semiotic strategies do speakers use to express sensory perceptions Which perceptions are easier to encode and which are ineffable And what are appropriate methods for studying the sensory aspects of linguistics After a broad overview of the field a detailed quantitative corpus based study of English sensory adjectives and their metaphorical uses is presented This analysis calls age old ideas into question such as the idea that the use of perceptual

metaphors is governed by a cognitively motivated hierarchy of the senses Besides making theoretical contributions to cognitive linguistics this research monograph showcases new empirical methods for studying lexical semantics using contemporary statistical methods

Innate Kevin J. Mitchell, 2020-03-31 What makes you the way you are and what makes each of us different from everyone else In *Innate* leading neuroscientist and popular science blogger Kevin Mitchell traces human diversity and individual differences to their deepest level in the wiring of our brains Deftly guiding us through important new research including his own groundbreaking work he explains how variations in the way our brains develop before birth strongly influence our psychology and behavior throughout our lives shaping our personality intelligence sexuality and even the way we perceive the world We all share a genetic program for making a human brain and the program for making a brain like yours is specifically encoded in your DNA But as Mitchell explains the way that program plays out is affected by random processes of development that manifest uniquely in each person even identical twins The key insight of *Innate* is that the combination of these developmental and genetic variations creates innate differences in how our brains are wired differences that impact all aspects of our psychology and this insight promises to transform the way we see the interplay of nature and nurture *Innate* also explores the genetic and neural underpinnings of disorders such as autism schizophrenia and epilepsy and how our understanding of these conditions is being revolutionized In addition the book examines the social and ethical implications of these ideas and of new technologies that may soon offer the means to predict or manipulate human traits Compelling and original *Innate* will change the way you think about why and how we are who we are Provided by the publisher

Human Anatomy Lab Manual Malgosia Wilk-Blaszczak, 2019-12-12 This is a lab manual for a college level human anatomy course Mastery of anatomy requires a fair amount of memorization and recall skills The activities in this manual encourage students to engage with new vocabulary in many ways including grouping key terms matching terms to structures recalling definitions and written exercises Most of the activities in this manual utilize anatomical models and several dissections of animal tissues and histological examinations are also included Each unit includes both pre and post lab questions and six lab exercises designed for a classroom where students move from station to station The vocabulary terms used in each unit are listed at the end of the manual and serve as a checklist for practicals
