

## QUESTION 9

(a) (i) Resonance frequency,  $f_0$  is the frequency at which the inductive reactance,  $X_L$  is equal to the capacitive reactance,  $X_C$ . i.e.  $X_L = X_C$  and  $f_0 = \frac{1}{2\pi\sqrt{LC}}$

(ii) (a)  $f = f_0$ : Current,  $I$  is in phase with supply voltage,  $V$

(B)  $f < f_0$ : Current  $I$ , leads the voltage

(C)  $f > f_0$ : Current  $I$ , lags the voltage.

(b) (i) Mutual inductance is the phenomenon of current in a coil changing, and an e.m.f being induced in a nearby circuit due to some of the magnetic flux produced by the circuit linking the second.

(ii) Given: Peak voltage,  $E_0 = 480V$   
 field density,  $B = 0.25T$   
 No of turns,  $N = 500$   
 Area =  $\frac{\pi d^2}{4} = \frac{3.142 \times (0.02)^2}{4} = 5.0272 \times 10^{-3} m^2$

Using  $E_0 = BAN\omega$

$$\omega = \frac{E_0}{BAN} = \frac{480}{0.25 \times 5.0272 \times 10^{-3} \times 500}$$

$$= \frac{480}{0.6284} = 765.8 \text{ rad/s}$$

D. Ficalora, 2013-08-15 Companion volume to Mayo Clinic internal medicine board review 10th ed c2013      **Hyperreality**

Johanna Blomqvist, 2024-04-09 How should we approach life and its challenges Are they real What do we really know about reality Could modern physics help us to understand What kind of worldview does it really shape for us What is the connection between reality and consciousness Do we live in a simulation In this book Johanna Blomqvist Ph D is diving into the question of reality a topic which has been of interest to her since childhood The desire to understand the world reality and the purpose of everything has also led her to the frontiers of science and to topics physicists do not often approach Her first book From Quantum Physics to Energy Healing A Physicist's Journey to Mind and Healing was published on Amazon in 2018

Hyperreality is a book about the nature of our reality and the hypotheses we have made about it through the centuries Johanna Blomqvist describes many cases and research experiments that will puzzle your mind Our reality seems to be something other than what the current prevailing materialistic worldview suggests From Chapter 2 Are we only machines There are many phenomena that we encounter almost daily but which do not fit into the current materialistic worldview Such phenomena are often classified as anomalies or parapsychological when it is impossible to explain them with prevailing theories Such phenomena include premonitions intuition telepathy premonition dreams and synchronicity Science seeks to find objective truth but is such a goal even possible After all all objective information is based on subjective observation Robert Jahn and Brenda Dunne founders of the PEAR Princeton Engineering Anomalies Research laboratory which has studied the effect of the mind on matter for decades say Mind without matter leaves us with a world of ephemeral abstraction matter without mind eliminates the essence of life itself It seems that the transition to the so called post materialistic era is essential We don't have any alternatives if we want to continue our life as humanity on Earth into the future We have to change our thinking It is time to understand our effect on physical reality and move to a new era beyond materialism You exist dive into hyperreality in which you are a significant participant Hyperreality book has been written to everyone seeking for answers about the nature of our reality purpose of everything consciousness and the connection between science and spirituality It may help you to understand phenomena that you earlier have only omitted This book is the answer that Johanna Blomqvist herself wanted to find as a teen when she was contemplating the question of reality why we are here and how should one live About the Author Johanna Blomqvist Ph D is a physicist entrepreneur and internationally published author In her work she combines a wide variety of fields and methods in a unique way often discussing topics from the cutting edge and unconventional areas of science Blomqvist is also a sought after lecturer educator and energy healer Since childhood she has been interested in understanding our reality consciousness and our role in this universe Johanna's first book From Quantum Physics to Energy Healing A Physicist's Journey to Mind and Healing was published on May 2018 She has written also Hyperreality Beyond the Horizon where Physics Meets Consciousness 2021 and The Mystery of Water A Physicist's Dive into Our Deepest Essence Fall 2024 Johanna lives in Helsinki Finland      **Elementary Quantum Mechanics** David S.

Saxon,2013-07-24 Based on lectures for an undergraduate UCLA course in quantum mechanics this volume focuses on the formulas of quantum mechanics rather than applications Widely used in both upper level undergraduate and graduate courses it offers a broad self contained survey rather than in depth treatments Topics include the dual nature of matter and radiation state functions and their interpretation linear momentum the motion of a free particle Schrödinger's equation approximation methods angular momentum and many other subjects In the interests of keeping the mathematics as simple as possible most of the book is confined to considerations of one dimensional systems A selection of 150 problems many of which require prolonged study amplify the text's teachings and an appendix contains solutions to 50 representative problems This edition also includes a new Introduction by Joseph A Rudnick and Robert Finkelstein Problem-Solving Strategies

Arthur Engel,2008-01-19 A unique collection of competition problems from over twenty major national and international mathematical competitions for high school students Written for trainers and participants of contests of all levels up to the highest level this will appeal to high school teachers conducting a mathematics club who need a range of simple to complex problems and to those instructors wishing to pose a problem of the week thus bringing a creative atmosphere into the classrooms Equally this is a must have for individuals interested in solving difficult and challenging problems Each chapter starts with typical examples illustrating the central concepts and is followed by a number of carefully selected problems and their solutions Most of the solutions are complete but some merely point to the road leading to the final solution In addition to being a valuable resource of mathematical problems and solution strategies this is the most complete training book on the market

**Tales of the Quantum** Art Hobson,2017 This is a book about the quanta that make up our universe the highly unified bundles of energy of which everything is made It explains wave particle duality randomness quantum states non locality Schrödinger's cat quantum jumps and more in everyday language for non scientists and scientists who wish to fathom science's most fundamental theory

**Computational Philosophy of Science** Paul Thagard,1988 By applying research in artificial intelligence to problems in the philosophy of science Paul Thagard develops an exciting new approach to the study of scientific reasoning This approach uses computational ideas to shed light on how scientific theories are discovered evaluated and used in explanations Thagard describes a detailed computational model of problem solving and discovery that provides a conceptually rich yet rigorous alternative to accounts of scientific knowledge based on formal logic and he uses it to illuminate such topics as the nature of concepts hypothesis formation analogy and theory justification An Introduction to Quantum Optics

Yanhua Shih,2020-12-16 This book offers a complete revision for its introduction to the quantum theory of light including notable developments as well as improvements in presentation of basic theory and concepts with continued emphasis on experimental aspects The author provides a thorough overview on basic methods of classical and quantum mechanical measurements in quantum optics enabling readers to analyze summarize and resolve quantum optical problems The broad coverage of concepts and tools and its practical experimental emphasis set it apart from other available resources

New discussions of timely topics such as the concept of the photon and distinguishability bring the entire contents up to date  
Key Features Provides a complete update of a classic textbook for the field Features many new topics including optical coherence coherent and incoherent imaging turbulence free interferometry Includes new chapters for intensity fluctuation correlation and thermal light ghost imaging and biphoton imaging Offers a complete overhaul of the introductory theory to give a more coherent and thorough treatment Expands on discussions of optical tests of quantum theory Popper s experiment Einstein s locality questions and the delayed choice quantum eraser
