Gupta, Irwin Guttman, 2013-04-29

Introducing the tools of statistics and probability from the ground up An understanding of statistical tools is essential for engineers and scientists who often need to deal with data analysis over the course of their work Statistics and Probability with Applications for Engineers and Scientists walks readers through a wide range of popular statistical techniques explaining step by step how to generate analyze and interpret data for diverse applications in engineering and the natural sciences Unique among books of this kind Statistics and Probability with Applications for Engineers and Scientists covers descriptive statistics first then goes on to discuss the fundamentals of probability theory Along with case studies examples and real world data sets the book incorporates clear instructions on how to use the statistical packages Minitab and Microsoft Office Excel to analyze various data sets The book also features Detailed discussions on sampling distributions statistical estimation of population parameters hypothesis testing reliability theory statistical quality control including Phase I and Phase II control charts and process capability indices A clear presentation of nonparametric methods and simple and multiple linear regression methods as well as a brief discussion on logistic regression method Comprehensive guidance on the design of experiments including randomized block designs one and two way layout designs Latin square designs random effects and mixed effects models factorial and fractional factorial designs and response surface methodology A companion website containing data sets for Minitab and Microsoft Office Excel as well as JMP routines and results Assuming no background in probability and statistics Statistics and Probability with Applications for Engineers and Scientists features a unique yet tried and true approach that is ideal for all undergraduate students as well as statistical practitioners who analyze and illustrate real world data in engineering and the natural sciences *The Elements of Statistical Learning* Trevor Hastie, Robert Tibshirani, Jerome Friedman, 2013-11-11 During the past decade there has been an explosion in computation and information technology With it have come vast amounts of data in a variety of fields such as medicine biology finance and marketing The challenge of understanding these data has led to the development of new tools in the field of statistics and spawned new areas such as data mining machine learning and bioinformatics Many of these tools

have common underpinnings but are often expressed with different terminology This book describes the important ideas in these areas in a common conceptual framework While the approach is statistical the emphasis is on concepts rather than mathematics Many examples are given with a liberal use of color graphics It should be a valuable resource for statisticians and anyone interested in data mining in science or industry The book's coverage is broad from supervised learning prediction to unsupervised learning The many topics include neural networks support vector machines classification trees and boosting the first comprehensive treatment of this topic in any book This major new edition features many topics not covered in the original including graphical models random forests ensemble methods least angle regression path algorithms for the lasso non negative matrix factorization and spectral clustering There is also a chapter on methods for wide data p bigger than n including multiple testing and false discovery rates Trevor Hastie Robert Tibshirani and Jerome Friedman are professors of statistics at Stanford University They are prominent researchers in this area Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title Hastie co developed much of the statistical modeling software and environment in R S PLUS and invented principal curves and surfaces Tibshirani proposed the lasso and is co author of the very successful An Introduction to the Bootstrap Friedman is the co inventor of many data mining tools including CART MARS projection pursuit and gradient boosting
