By publishing this handlist on the occasion of the Snouck Hurgronje centenary commemoration the Leyden University Library wishes to express its deep-felt gratitude to that great Arabist and Islamic scholar who directed our Oriental Library Department as Interpres for nearly 30 years and greatly enriched its collections by

leaving us his books and manuscripts. Up to now only Snouck Hurgronje's Malay manuscripts were accessible through a printed catalogue made by Prof. dr. Ph. S. van Ronkel. Now the Arabic manuscripts belonging to his collection and numbering nearly three hundred, are being made known for the first time through this list. This is the first catalogue of oriental manuscripts made by a member of our library staff. Formerly the task of describing the oriental manuscripts was entrusted to the Interpres Legati Warneriani and his helpers, or to specialists among the teaching staff of the Leyden University or elsewhere. In

1919 the adiutor Interpretis Dr. C. van Arendonk became a member of the library staff. He had a profound knowledge of Arabic literature but, for reasons set forth in the introduction to this work, he never published a catalogue of the Arabic manuscripts in his keeping. However, the notes left by him are an important contribution towards a new catalogue. They have been extensively used by his successor in compiling this handlist. The present catalogue is the fourth and final volume in a series that covers the Turkish manuscripts preserved in public libraries and museums in the Netherlands. This volume gives detailed

descriptions of Turkish manuscripts in minor Dutch collections, found in libraries and museums in Leiden, Utrecht, Groningen and other towns. This eminently readable book is the first extensive monograph dealing with the early history of the diplomatic relations between the Ottoman Empire and the Netherlands based on Western as well as Turkish sources and secondary literature. Its aim is to present a balanced bilateral account of both the Turkish and the Dutch viewpoint. The statesmanship of the Ottoman admiral and grand vizier Khalil Pasha, who took the diplomatic initiative in 1610 is studied in detail as is the diplomatic activity of

Cornelis Haga, the first Dutch ambassador to the Porte. Their successful negotiations led to the grant of capitulations by the Sultan Ahmed I in 1612. This document formed the basis of 400 years of political and economic relations of the Netherlands with Turkey. An edition of the text and an integral translation are also given. Based on research in the Dutch State and Foreign Office archives, these essays examine the impact of banditry in western Anatolia on local Dutch communities, Dutch relations with Armenia (1913-1923), 'pan-Islamism' and Dutch colonialism, and Dutch visits to Ottoman ports. This catalogue describes in a

detailed and systematic way the rich and varied collection of Turkish manuscripts preserved in the John Rylands University Library in Manchester. This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. First published in 1990. Routledge is an imprint of Taylor & Francis, an informa company. Applications of Remote Sensing in Agriculture contains the proceedings of the 48th Easter School in Agricultural Science, held at the University of Nottingham on April 3-7, 1989. The meeting

invites 146 delegates from over 22 countries and contributions to this book come from nine countries. This book generally presents a review of the achievements of remote sensing in agriculture, establishes the state of the art, and gives pointers to developments. This text is organized into seven parts, wherein Parts I-III cover the principles of remote sensing, climate, soil, land classification, and crop inventories. Productivity; stress; techniques for agricultural applications; and opportunities, progress, and prospects in the field of remote sensing in agriculture are also discussed. This major work

retraces the emergence and development of the Bourgeois public sphere - that is, a sphere which was distinct from the state and in which citizens could discuss issues of general interest. In analysing the historical transformations of this sphere, Habermas recovers a concept which is of crucial

significance for current debates in social and political theory. Habermas focuses on the liberal notion of the bourgeois public sphere as it emerged in Europe in the early modern period. He examines both the writings of political theorists, including Marx, Mill and de Tocqueville, and the specific institutions and social

forms in which the public sphere was realized. This brilliant and influential work has been widely recognized for many years as a classic of contemporary social and political thought, of interest to students and scholars throughout the social sciences and humanities.
