

Color at Light Speed

Analyze the wavelength and frequency of the colors in light.

Visible light consists of a range of different colors that combine to form white light. This range is called the **color spectrum**. Each color in the color spectrum has a unique wavelength and frequency. Our eyes see light of different wavelengths as different colors. The frequency (f) and wavelength (λ) of visible light can be used to determine the speed of light (v) by the following equation:

$$\text{speed of light} = \text{frequency} \times \text{wavelength}$$

$$v = f \times \lambda$$

The frequency of waves is measured in waves per second, or hertz (Hz). The wavelength can be measured as the distance between two wave crests. The diagram below shows the spectrum of visible light with the corresponding wavelengths for each color. As you can see, the wavelengths of visible light fall in the range of 400 nanometers (nm) to 750 nm. One nanometer is equal to 0.000000001 m.

1. Calculate the speed of light for the following. Show your work.

- a. a shade of yellow light with a wavelength of 5.8×10^{-7} m and a frequency of 5.17×10^{14} Hz

- b. a shade of red light with a wavelength of 6.98×10^{-7} m and a frequency of 4.3×10^{14} Hz

- c. a shade of violet light with a wavelength of 4×10^{-7} m and a frequency of 7.5×10^{14} Hz

- d. What can you conclude about the speed of light of different colors?

Light & Sound (eBook) Edward P. Ortleb, Richard Cadice, 1993-09-01 This book presents a program of basic studies dealing with light and sound energy. The sources and nature of light and sound are presented along with various characteristics of each phenomenon. Topics include instruments that use and observe light and sound materials that affect light and sound and communication. Each of the twelve teaching units in this book is introduced by a color transparency print book or PowerPoint slide eBook that emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key. Faster than Light Robert J. Nemiroff, 2023-09-09 Albert Einstein knew already in the early 1900s when he first published his famous paper about the constancy of the speed of light that not only did this constancy imply that mass contains energy $E = mc^2$ but that faster than light motion could lead to paradoxes, some that seemed to involve backwards time travel. What are these paradoxes? Why is light and its speed relevant? This book will lead you through an obstacle course of conundrums and oddities, building up your understanding of how light's speed creates simple but mind-expanding paradoxes, one conceptual riddle at a time. This is not your average popular science book. This is also not a textbook. This book takes one theme, the universally constant speed of light, and shows how it may appear compromised on scales from the quantum mechanics of the very small to the cosmology of the very large, and the resulting surprising implications can result. Book Review 1 Imagine embarking on a journey to comprehend the physics of the entire universe with a guide who's not only an expert but makes the concepts digestible and entertaining. Robert J. Nemiroff offers such a journey in *Faster Than Light*, a book that initially describes the speed of light, then touches on subjects as esoteric as time travel using the theory of relativity and speculation on how to send information back in time among other subjects. blue ink Book Review 2 takes readers on a wild ride through the ins and outs of the speed
