C. Cooper,Guerrard Byrne,2020-09-08 This title provides an illuminating examination of the current state of xenotransplantation grafting or transplanting organs or tissues between members of different species and how it might move forward into the clinic To be sure this is a critical topic as a major problem that remains worldwide is an inadequate supply of organs from deceased human donors severely limiting the number of organ transplants that can be performed each year Based on presentations given at a major conference on xenotransplantation this title includes important views from many leading experts who were invited to present their data and opinions on how xenotransplantation can advance into the clinic Attention was concentrated on pig kidney and heart transplantation as it is in regard to these organs that most progress has been made Collectively these chapters effectively highlight the many advantages of xenotransplantation to patients with end stage organ failure thereby encouraging the mapping of a concrete pathway to clinical xenotransplantation The book is organized across 22 chapters beginning with background information on clinical and experimental xenotransplantation Following this are discussions addressing how pigs can be genetically engineered for their organs to be resistant to the human immune response through deletion of pig xenoantigens and the insertion of protective human transgenes Subsequent chapters analyze complications that arise in practice comparing allotransplant and xenotransplant rejection The selection of the ideal patients for the first clinical trials is discussed Finally the book concludes with an analysis on the regulatory economic and social aspects of this research including FDA perspectives and the sensitive psychosocial factors regarding allotransplantation and xenotransplantation A major and timely addition to the literature Clinical Xenotransplantation will be of great interest to all researchers physicians and academics from other disciplines with an interest in xenotransplantation
