visualization of phenomena in ways formerly believed to be completely impossible. These technologies have made major contributions to the elucidation of the pathology of diseases as well as to their diagnosis and therapy. The volume presents various studies from molecular imaging to clinical imaging. It also focuses on innovative creative advanced research that gives full play to imaging technology in the broad sense while exploring cross disciplinary areas in which individual research fields interact and pursuing the development of new techniques where they fuse together. The book is separated into three parts the first of which addresses the topic of visualizing and controlling molecules for life. The second part is devoted to imaging of disease mechanisms while the final part comprises studies on the application of imaging technologies to diagnosis and therapy. The book contains the proceedings of the 12th Uehara International Symposium 2017 Make Life Visible sponsored by the Uehara Memorial Foundation and held from June 12 to 14 2017. It is written by leading scientists in the field and is an open access publication under a CC BY 4.0 license.

**Equids--zebras, Asses, and Horses** Patricia Des Roses Moehlman, IUCN/SSC Equid Specialist Group, 2002. The new Equid Action Plan provides current knowledge on the biology ecology and conservation status of wild zebras asses and horses. It specifies what information is lacking and prioritizes needed conservation actions. The Action Plan also provides chapters on equid taxonomy genetics reproductive biology and population dynamics. These chapters highlight unsolved issues of taxonomy and genetics. They also provide information and insight into the special demographic and genetic challenges of managing small populations. The chapter on disease provides a review of documented equine disease and epidemiology and focuses on priorities for equid conservation health. The final chapter deals with the importance of developing an assessment methodology that explicitly considers the role of equids in ecosystems and the ecological processes that are necessary for ecosystem viability. The approach of combining ecological field studies and ecosystem modeling should prove useful for the scientific management and conservation of wild equids worldwide. These chapters provide research and conservation practitioners with new information and paradigms.

Decision Making under Deep Uncertainty Vincent A. W. J. Marchau, Warren E. Walker, Pieter J. T. M. Bloemen, Steven W. Popper, 2019-04-04. This open access book focuses on both the theory and practice associated with the tools and approaches for decisionmaking in the face of deep uncertainty. It explores approaches and tools supporting the design of strategic plans under deep uncertainty and their testing in the real world including barriers and enablers for their use in practice. The book broadens traditional approaches and tools to include the analysis of actors and networks related to the problem at hand. It also shows how lessons learned in the application process can be used to improve the approaches and tools used in the design process. The book offers guidance in identifying and applying appropriate approaches and tools to design plans as well as advice on implementing these plans in the real world.
