

**DAA LAB VIVA QUESTIONS**

**\*\*\*\*\*SET I\*\*\*\*\***

**1. What is an algorithm?**

An algorithm is a sequence of unambiguous instructions for solving a problem. i.e., for obtaining a required output for any legitimate input in a finite amount of time

**2. What are important problem types? (or) Enumerate some important types of problems.**

1. Sorting
2. Searching
3. Numerical problems
4. Geometric problems
5. Combinatorial Problems
6. Graph Problems
7. String processing Problems

**3. Name some basic Efficiency classes**

1. Constant
2. Logarithmic
3. Linear
4.  $n \log n$
5. Quadratic
6. Cubic
7. Exponential
8. Factorial

**4. What are algorithm design techniques?**

Algorithm design techniques ( or strategies or paradigms) are general approaches to solving problems algorithmically, applicable to a variety of problems from different areas of computing. General design techniques are:

- (i) Brute force
- (ii) divide and conquer
- (iii) decrease and conquer
- (iv) transform and conquer
- (v) greedy technique
- (vi) dynamic programming
- (vii) backtracking
- (viii) branch and bound

**5. How is an algorithm's time efficiency measured?**

Time efficiency indicates how fast the algorithm runs. An algorithm's time efficiency is measured as a function of its input size by counting the number of times its basic operation

Communication Systems Engineering with Software Defined Radio this book provides a practical approach to quickly learning the software defined radio SDR concepts needed for work in the field This up to date volume guides readers on how to quickly prototype wireless designs using SDR for real world testing and experimentation This book explores advanced wireless communication techniques such as OFDM LTE WLA and hardware targeting Readers will gain an understanding of the core concepts behind wireless hardware such as the radio frequency front end analog to digital and digital to analog converters as well as various processing technologies Moreover this volume includes chapters on timing estimation matched filtering frame synchronization message decoding and source coding The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception Multiple case studies are provided throughout the book Both MATLAB and Simulink source code are included to assist readers with their projects in the field

Data Converters Franco Maloberti,2007-02-22 This book is the first graduate level textbook presenting a comprehensive treatment of Data Converters The advancement of digital electronics urged the availability of a still missing support for teaching and self learning analog digital interfaces at many levels the specification the conversion methods and architectures the circuit design and the testing This book after the necessary study of the background theoretical elements covers aspects and provide elements for a deep and comprehensive knowledge The breath and the level of details of topics is enhanced by introductory material in each chapter and the use of many examples most of them in the form of computer behavioral simulations The examples and the end of chapter problems help in understanding and favor self practice using tools that are effective for training and for design activity Data Converters is a textbook that is also essential for engineering professionals as it was written for responding to a shortage of organically organized material on the topic The book assumes a solid background in analog and digital circuits as well as a working knowledge of simulation tools for circuit and behavioral analysis A background on statistical analysis is also helpful though not strictly necessary Coverage of all the basic elements essential for a clear understanding of sampling quantization noise in sampled data systems and mathematical tools for sampled data linear systems Comprehensive definition of the parameters used to specify data converters and necessary for understanding product data sheets Coverage of all the architectures used in Nyquist rate data converters and detailed study of features limits and design techniques Detailed study of oversampled and Sigma Delta converters with simulation examples and use of spectra and histograms for a clear understanding of features and limit if the noise shaping Coverage of digital correction and calibration techniques for enhancing performances Use of theory and intuitive views to explain circuits and systems operation and limits Coverage of testing methods and description of the data processing used for testing and characterization Extensive use of Simulink and Matlab in examples and problem sets to assist reader comprehension and favor deeper study
