Daughters of the Moon Feb 27 2021 LIZABET They called her the Blood Countess. From her home in the Carpathian Mountains, she enjoyed pleasures so profane no human could even imagine them. Even now, centuries later and an ocean away, the old ones cross themselves at the mention of her name. And she will happily show them true fear now that she is reunited with the golden-eyed girl, the beauty the Dark One promised would be her most faithful pupil and servant... CHLOE She knows her name, but she can't remember anything else from her past. Her only memories are of Lizabet, feeding in the darkness. But ever since meeting Johnny, she knows she must stop Lizabet's depraved cruelty...no matter what the cost.

Book of the Moon Aug 16 2022 For thousands of years, the Moon has been the one thing in the night sky that everyone anywhere on our planet

recognises. Trace the story of the Moon around the world and through history, from ancient legends about its creation, to its first sighting through a telescope, right up until the Apollo 11 mission and the first Moon landing in 1969.

The Value of the Moon Mar 23 2023 While the Moon was once thought to hold the key to space exploration, in recent decades, the U.S. has largely turned its sights toward Mars and other celestial bodies instead. In *The Value of the Moon*, lunar scientist Paul Spudis argues that the U.S. can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy. Spudis explores three reasons for returning to the Moon: it is close, it is interesting, and it is useful. The proximity of the Moon not only allows for frequent launches, but also control of any machinery we place there. It is interesting because recorded deep on its surface and in its craters is the preserved history of the moon, the sun, and indeed the entire galaxy. And finally, the moon is useful because it is rich with materials and energy. The moon, Spudis argues, is a logical base for further space exploration and even a possible future home for us all. Throughout his work, Spudis incorporates details about man's fascination with the moon and its place in our shared history. He also explores its religious, cultural, and scientific resonance and assesses its role in the future of spaceflight and our national security and prosperity. Eye of the Moon May 13 2022 This is a second edition print (POD) of "Eye of the Moon". Did Alice die from a curse? Or was she murdered? In this award-winning American Gothic novel, Percy and Johnny, two estranged childhood friends, reunite to attend an anniversary house party at the haunting family estate of Rhinebeck, where Johnny's aunt Alice died twenty years before, while reading an Egyptian Book of the Dead. Stumbling upon her hidden artifacts, including her letters and

journals, Percy and Johnny discover her story is very different from what they had been led to believe. Nothing is what it seems and everyone has a secret to protect. You'll love this deftly crafted, riveting gothic mystery by a master of the genre. Be captivated late into the night with its intricate plot, fascinating characters, humor, and just the right amount of the supernatural. Get it now.

The Night of the Moon Mar 03 2024 Yasmeen has a wonderful time celebrating the Muslim holy month of Ramadan with her family and friends.

The Moon & the Western Imagination Jun 01 2021 The Moon is at once a face with a thousand expressions and the archetypal planet. Throughout history it has been gazed upon by people of every culture in every walk of life. From early perceptions of the Moon as an abode of divine forces, humanity has in turn accepted the mathematized Moon of the Greeks, the naturalistic lunar portrait of Jan van Eyck, and the telescopic view of Galileo. Scott Montgomery has produced a richly detailed analysis of how the Moon has been visualized in Western culture through the ages, revealing the faces it has presented to philosophers, writers, artists, and scientists for nearly three millennia. To do this, he has drawn on a wide array of sources that illustrate mankind's changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science. Montgomery especially focuses on the seventeenth century, when the Moon was first mapped and its features named. From literary explorations such as Francis Godwin's *Man in the Moone* and Cyrano de Bergerac's *L'autre monde* to Michael Van Langren's textual lunar map and Giambattista Riccioli's *Almagestum novum*, he shows how Renaissance man was moved by the lunar orb, how he battled to claim its surface, and how he in turn elevated the Moon to a new level in human awareness. The effect on human imagination has been cumulative: our idea of the Moon, and therefore the planets, is multilayered and complex, having been enriched by associations played out in increasingly complicated harmonies over time. We have shifted the way we think about the lunar face from a "perfect" body to an earthlike one, with corresponding changes in verbal and visual expression.

Ultimately, Montgomery suggests, our concept of the Moon has never wandered too far from the world we know best—the Earth itself. And when we finally establish lunar bases and take up some form of residence on the Moon's surface, we will not be conquering a New World, fresh and mostly unknown, but a much older one, ripe with history.

To the Moon! May 05 2024 The exciting and inspiring true story of Apollo 8, the first crewed spaceship to break free of the Earth's orbit and reach the moon, by the best-selling author of *Apollo 13*. What's more exciting than spaceships and astronauts? How about a spaceship carrying the first astronauts ever to see the moon firsthand--on Christmas! The year was 1968, and the American people were still reeling from the spacecraft fire that killed the Apollo 1 crew a year earlier. On top of that, there were rumors that the Russian cosmonauts were getting ready to fly around the moon. NASA realized that they needed to take a bold step--and that they needed to take it now. They wanted to win the space race against Russia and hold true to President Kennedy's promise to put a man on the moon by the end of the decade. So in a risky move, a few days before Christmas of that year, they sent Frank Borman, Jim Lovell, and Bill Anders to the moon! This book about the exciting and inspiring true story of Apollo 8, the first crewed spaceship to break free of Earth's orbit and reach the moon, tells the story of these three brave men, the frantic rush to get their rocket ready, and the journey that gave the American people--and the world--a new look at the planet we live on and the corner of space we inhabit. Filled with the science and training required to put a person into space, and every detail of what it's like to live in a spaceship for days on end (including what happens when astronauts need to use the bathroom), this book is sure to leave kids clamoring for a spot on the next mission to outer space.

Reaching for the Moon Mar 11 2022 "This rich volume is a national treasure." —Kirkus Reviews (starred review) "Captivating, informative, and inspiring...Easy to follow and hard to put down." —School Library Journal (starred review) The inspiring autobiography of NASA mathematician Katherine Johnson, who helped launch Apollo 11. As a

young girl, Katherine Johnson showed an exceptional aptitude for math. In school she quickly skipped ahead several grades and was soon studying complex equations with the support of a professor who saw great promise in her. But ability and opportunity did not always go hand in hand. As an African American and a girl growing up in an era of brutal racism and sexism, Katherine faced daily challenges. Still, she lived her life with her father's words in mind: "You are no better than anyone else, and nobody else is better than you." In the early 1950s, Katherine was thrilled to join the organization that would become NASA. She worked on many of NASA's biggest projects including the Apollo 11 mission that landed the first men on the moon. Katherine Johnson's story was made famous in the bestselling book and Oscar-nominated film *Hidden Figures*. Now in *Reaching for the Moon* she tells her own story for the first time, in a lively autobiography that will inspire young readers everywhere.

The Moon Book (New & Updated Edition) Jan 21 2023 An up-to-date, clear and interesting introduction to our magnificent moon from the the award-winning author of science books for children. Shining light on all kinds of fascinating facts about our moon, this simple, introductory book includes information on how the moon affects the oceans' tides, why the same side of the moon always faces earth, why we have eclipses, and more. This newly revised edition, available in time for the 50th anniversary of the moon landing, incorporates new, up-to-date information based on recent discoveries, and includes an updated map of the moon's surface. Thoroughly vetted by an astrophysics expert, *The Moon Book* is a perfect introduction lunar phases, orbit, the history of space exploration, and more. Using her signature combination of colorful, clear illustrations and accessible text, Gail Gibbons reinforces important vocabulary with simple explanations, perfect for budding astronomers. Legends about the moon, trivia, and facts about the moon landing are also included.

The Moon Apr 23 2023 A Sunday Times must read book of 2019 'An out-of-this-world read ... brilliant and compelling. Morton is a high-octane British science journalist, and every chapter is littered with material that strikes, amazes or haunts ... this is a book filled not just with a lifetime's

knowledge of its subject but with a lifetime's suppressed excitement.' James McConnachie, Sunday Times Every generation has looked up from the Earth and wondered at the beauty of the Moon. 50 years ago, a few Americans became the first to do the reverse - with the whole world watching through their eyes. In this short but wide-ranging book, Oliver Morton explores the history and future of humankind's relationship with the Moon. A counterpoint in the sky, it has shaped our understanding of the Earth from Galileo to Apollo. Its gentle light has spoken of love and loneliness; its battered surface of death and the cosmic. For some, it is a future on which humankind has turned its back. For others, an adventure yet to begin. Advanced technologies, new ambitions and old dreams mean that men, women and robots now seem certain to return to the Moon. What will they learn there about the universe, the Earth-and themselves? And, this time, will they stay?

Stranger to the Moon Feb 19 2023 A chilling allegorical novella by the masterful Colombian writer who poses timeless questions about violence and subjugation, power and freedom. Imagining the darkest of power imbalances in a dystopian world, in which the most vulnerable are held captive and wherein survival depends on the ability to remain anonymous, identity is a threat. Those who have everything would revel in the humiliation of others and identification brings with it the ultimate punishment. When hiding is no longer possible, the only choice may be to rebel. More frightening than the dystopia of Ishiguro's *Never Let Me Go* and with elements of the surreal to rival Kafka's *Metamorphosis*, Rosero's hypnotic tale builds in tension to deliver a crippling emotional punch.

Next Time You See the Moon Oct 30 2023 This fascinating book will stay with children every time they gaze up at the night sky. Through vivid pictures and engaging explanations, children will learn about many of the Moon's mysteries: what makes it look like a silvery crescent one time and a chalk-white ball a few nights later, why it sometimes appears in the daytime, where it gets its light, and how scientists can predict its shape on your birthday a thousand years from now. *Next Time You See the Moon* is an ideal way to explain the science behind the shape of the

Moon and bring about an evening outing no child—or grown-up—will soon forget. Awaken a sense of wonder in a child with the Next Time You See series from NSTA Kids. The books will inspire elementary-age children to experience the enchantment of everyday phenomena such as sunsets, seashells, fireflies, pill bugs, and more. Free supplementary activities are available on the NSTA website. Especially designed to be experienced with an adult—be it a parent, teacher, or friend—Next Time You See books serve as a reminder that you don't have to look far to find something remarkable in nature.

Evolving Theories on the Origin of the Moon Nov 06 2021 This book follows the development of research on the origin of the Moon from the late 18th century to the present. By gathering together the major texts, papers, and events of the time, it provides a thorough chronicle of the paradigmatic shift in planetary science that arose from the notion that the Earth-Moon system was formed from two colliding planetary bodies. The book covers pre-Apollo ideas, the conceptual evolution during and subsequent to the Apollo explorations of the Moon, and the development of the Earth-Moon system consensus. A plethora of excerpts from key publications are included to demonstrate the shift in scientific focus over the centuries. Through its comprehensive review of lunar science research and literature, this book shows how new technologies and discoveries catalyzed the community and revolutionized our understanding of the Moon's formation.

Child of the Moon Feb 07 2022 A powerful debut collection of poetry reflecting on fear, shame, despair, suicide, and the unconditional love that leads to healing. In between being your mother and father, I forgot to be your daughter And became the child of the moon An illustrated poetry collection about finding light in the darkness. Set against the backdrop of the Lebanese Civil War and the author's turbulent family life, *Child of the Moon* is a powerful reflection on her journey through fear, shame and despair, and the unconditional love that helped her begin to heal from childhood trauma. Praise for *Child of the Moon* "In her debut collection, Semaan offers an upfront and moving glimpse into the true nature of healing: an imperfect, nonlinear journey." —Amanda

Lovelace, bestselling author of the princess saves herself in this one [In the Shadow of the Moon](#) Jun 25 2023 From an award-winning author, astronomer, and anthropologist, an exploration of the scientific and cultural significance of the mesmerizing cosmic display. Since the first humans looked up and saw the sun swallowed by darkness, our species has been captivated by solar eclipses. Astronomer and anthropologist Anthony Aveni explains the history and culture surrounding solar eclipses, from prehistoric Stonehenge to Babylonian creation myths, to a confirmation of Einstein's theory of general relativity, to a spectacle that left New York City in the moon's shadow, to future eclipses that will capture human imaginations. In one accessible and engaging read, Aveni explains the science behind the phenomenon, tracks eclipses across the ancient world, and examines the roles of solar eclipses in modern times to reveal the profound effects these cosmic events have had on human history. Colored by his own experiences—Aveni has witnessed eight total solar eclipses in his lifetime—his account of astronomy's most storied phenomenon will enthrall anyone who has looked up at the sky with wonder. "Aveni's authoritative but accessible text is the clearest statement of the way our perception of eclipses has changed over the centuries." —Stuart Clark, *New Scientist* "Authoritative and engaging." —Marcelo Gleiser, NPR's 13.7 "A recommended way to share the spirit of the occasion." —Laurence A. Marschall, *Natural History* magazine "Everything you need to enjoy a solar eclipse—and even predict one, just like the Babylonians did! Aveni's entertaining explorations show the very different impacts eclipses have had on past and present cultures." —David DeVorkin, National Air and Space Museum, Smithsonian Institution

The Moon Is Always Round May 25 2023 Even young children want answers to the hard questions about God and suffering. In *The Moon Is Always Round*, seminary professor and author Jonathan Gibson uses the vivid imagery of the moon to explain to children how God's goodness is always present, even when it might appear to be obscured by upsetting or difficult circumstances. In this beautiful, full-color illustrated book, he allows readers to eavesdrop on the conversations he had with his young

son in response to his sister's death. Father and son share a simple liturgy together that reminds them that, just as the moon is always round despite its different phases, so also the goodness of God is always present throughout the different phases of life. A section in the back of the book offers further biblical help for parents and caregivers in explaining God's goodness to children. Jonathan Gibson reminds children of all ages that God's goodness is present in the most difficult of times, even if we can't always see it.

West of the Moon Apr 04 2024 In *West of the Moon*, award-winning and New York Times bestselling author Margi Preus expertly weaves original fiction with myth and folktale to tell the story of Astri, a young Norwegian girl desperate to join her father in America. After being separated from her sister and sold to a cruel goat farmer, Astri makes a daring escape. She quickly retrieves her little sister, and, armed with a troll treasure, a book of spells and curses, and a possibly magic hairbrush, they set off for America. With a mysterious companion in tow and the malevolent "goatman" in pursuit, the girls head over the Norwegian mountains, through field and forest, and in and out of folktales and dreams as they steadily make their way east of the sun and west of the moon.

Secrets of the Moon Jan 26 2021 *Secrets of the Moon: Understanding and Analysing the Lunar Surface* provides a unique account of the origin of key features on the lunar surface. Containing historical accounts and the latest observations from the field, in addition to exciting data from the Apollo manned missions, it describes the development of our current understanding of our Moon. It also explores the fracturing of the Moon, a topic not explored in other literature in the area, and contains a statistical treatment of the smaller craters of the Moon, as well as a geological treatment of the larger craters. This moderately technical account is designed to clarify and update the general thinking on the nature and origin of the most important lunar surface features for both undergraduate and research students. It may also be read by the professional scientist, especially the astronomer and the geologist who has found little time to study the Moon's topography, in addition to the

lunar amateur astronomer and even the dedicated layman with a keen interest in lunar science. The book excludes nearly all mathematical symbols in order to remain accessible to those without a formal education in the area. Key Features: Authored by an expert in the area Presents a comprehensive account of the lunar surface, from historical observations to the NASA Apollo manned missions and the latest observations and data in the field Includes a statistical and geological treatment of the craters Dr. Gilbert Fielder is Reader Emeritus at Lancaster University, United Kingdom. He performed extended teaching at Lancaster University on Planetary Science and introduced a new degree course on Remote Sensing. Prior to this, he was Principal Investigator in NASA's Heat Capacity Mapping Programme, while continuing to head the Lunar and Planetary Unit at Lancaster until retirement. Dr. Fielder has authored several books, and presented many BBC and ITA television news programmes, as well as popular programmes with Sir Patrick Moore (on the BBC's "The Sky at Night") and, on the occasion of the first landing of astronauts on the Moon, with David Frost as Chairman in a special programme.

The Glimpses of the Moon Dec 20 2022

The Girl and the Moon Jan 09 2022 In the third exhilarating novel in this dazzling epic fantasy series, a young outcast will fight against staggering odds to save her world. On the planet Abeth, a narrow Corridor of green land is surrounded on all sides by ice plains where only the strong survive. Ice triber Yaz has completed a perilous journey and arrived at the Corridor, and it exceeds and overwhelms all of her expectations. Everything seems different but some constants remain: her old enemies are still two steps ahead, bent on her destruction. She makes her way to the Convent of Sweet Mercy, where nuns train young girls who show the old gifts, but like the Corridor itself the convent is packed with peril and opportunity. Yaz has much to learn from the nuns—if they don't decide to execute her. The fate of everyone squeezed between the Corridor's vast walls, and ultimately the fate of those laboring to survive out on ice itself, hangs from the moon, and the battle to save the moon centers on the Ark of the Missing, buried beneath the

emperor's palace. Everyone wants Yaz to be the key that will open the Ark - the one the wise have sought for generations. But sometimes wanting isn't enough.

The Man in the Moon Sep 04 2021 When a newly orphaned baby in the moon makes friends with the children of Earth, he seeks a way to ward off their fears and nightmares.

How We Got to the Moon Jul 03 2021 LONGLISTED FOR THE NATIONAL BOOK AWARD • YALSA EXCELLENCE IN NONFICTION FINALIST • A ROBERT F. SIBERT HONOR BOOK This beautifully illustrated, oversized guide to the people and technology of the moon landing by award-winning author/illustrator John Rocco (illustrator of the Percy Jackson series) is a must-have for space fans, classrooms, and tech geeks. Everyone knows of Neil Armstrong's famous first steps on the moon. But what did it really take to get us there? The Moon landing is one of the most ambitious, thrilling, and dangerous ventures in human history. This exquisitely researched and illustrated book tells the stories of the 400,000 unsung heroes--the engineers, mathematicians, seamstresses, welders, and factory workers--and their innovations and life-changing technological leaps forward that allowed NASA to achieve this unparalleled accomplishment. From the shocking launch of the Russian satellite Sputnik to the triumphant splashdown of Apollo 11, Caldecott Honor winner John Rocco answers every possible question about this world-altering mission. Each challenging step in the space race is revealed, examined, and displayed through stunning diagrams, experiments, moments of crisis, and unforgettable human stories. Explorers of all ages will want to pore over every page in this comprehensive chronicle detailing the grandest human adventure of all time!

Gardens of the Moon Oct 06 2021 Vast legions of gods, mages, humans, dragons and all manner of creatures play out the fate of the Malazan Empire in this first book in a major epic fantasy series from Steven Erikson. The Malazan Empire simmers with discontent, bled dry by interminable warfare, bitter infighting and bloody confrontations with the formidable Anomander Rake and his Tiste Andii, ancient and

implacable sorcerers. Even the imperial legions, long inured to the bloodshed, yearn for some respite. Yet Empress Laseen's rule remains absolute, enforced by her dread Claw assassins. For Sergeant Whiskeyjack and his squad of Bridgeburners, and for Tattersail, surviving cadre mage of the Second Legion, the aftermath of the siege of Pale should have been a time to mourn the many dead. But Darujhistan, last of the Free Cities of Genabackis, yet holds out. It is to this ancient citadel that Laseen turns her predatory gaze. However, it would appear that the Empire is not alone in this great game. Sinister, shadowbound forces are gathering as the gods themselves prepare to play their hand... Conceived and written on a panoramic scale, Gardens of the Moon is epic fantasy of the highest order--an enthralling adventure by an outstanding new voice. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

The Moon Belongs to Everyone Nov 18 2022 The Moon Belongs to Everyone' by Stacy Mehrfar, is a response to the contemporary experience of migration ? of shifting continents and mindsets. A multi-layered visual narrative set in a non-locatable landscape, the book reflects upon the loss of roots, and search for belonging in the wake of immigration.

Bones of the Moon Aug 28 2023 Cullen James is a young woman whose life dictates her dreams-and whose dreams control her life. In her first dream, she found the perfect man-and the same thing promptly happened in life. Now, she has begun to dream dreams set in Rondua, a fantasy world of high adventure, full of tests of her courage and strength. Slowly and quietly, her dream world is spilling over into her New York City reality and beginning to threaten everything she loves in life. Her friends are gathered to help her-but even her newfound courage may not be enough. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Moon Apr 11 2022 With dazzling images throughout, and illuminating text by astrobiologist Dr. David Warmflash, Moon: An Illustrated History chronologically presents 100 milestones in the Moon's development and exploration. Starting 4.5 billion years ago when the Moon formed, this

visually stunning volume moves from sixth-century BCE predictions of solar eclipses, to the twentieth-century Space Race between the US and the Soviet Union, to private space corporations and possible future lunar colonies.

I Took the Moon for a Walk Nov 30 2023 Embark on a dreamy, nighttime jaunt with a young boy and the moon. Overcoming a fear of the dark and discovering the world at night lives at the heart of this poetic tale. Includes notes about the moon and plants and animals that thrive in the wee hours.

Origin of the Earth and Moon Oct 18 2022 Since the beginning of civilization, the origins of the Earth and Moon have been the subjects of continuing interest, speculation, and enquiry. These are also among the most challenging of all scientific problems. They are, perhaps to a unique degree, interdisciplinary, having attracted the attention of philosophers, astronomers, mathematicians, geologists, chemists, and physicists. A large and diverse literature has developed, far beyond the capacity of individuals to assimilate adequately. Consequently, most of those who attempt to present review-syntheses in the area tend to reflect the perspectives of their own particular disciplines. The present author's approach is that of a geochemist, strongly influenced by the basic philosophy of Harold Urey. Whereas most astronomical phenomena are controlled by gravitational and magnetic fields, and by nuclear interactions, Urey (1952) emphasized that the formation of the solar system occurred in a pressure-temperature regime wherein the chemical properties of matter were at least as important as those of gravitational and magnetic fields. This was the principal theme of his 1952 book, "The Planets," which revolutionized our approach to this subject. In many subsequent papers, Urey strongly emphasized the importance of meteorites in providing critical evidence of chemical conditions in the primordial solar nebula, and of the chemical fractionation processes which occurred during formation of the terrestrial planets. This approach has been followed by most subsequent geochemists and cosmochemists.

Lunar Sourcebook Aug 04 2021 The only work to date to collect data gathered during the American and Soviet missions in an accessible and

complete reference of current scientific and technical information about the Moon.

The Moon May 01 2021

Keeper of the Moon Dec 08 2021 The author of two acclaimed novels, *The Acorn Plan* and *Woodrow's Trumpet*, now gives us his first nonfiction book. Beautifully written, it is an affecting memoir of his hardscrabble life in the rural South, his coming-of-age as a novelist, and his struggle with a life-threatening disease.

Maza of the Moon Jul 15 2022 A group of brave astronauts make a startling discovery on the moon! It was not as empty as they thought it was! excerptExcerpt "We've got to win that reward, Roger, or close up shop." Ted Dustin, youthful president and general manager of Theodore Dustin, Inc. reached mechanically for his tobacco pouch, filled his black briar, and sighed. Roger Sanders, assistant to the president, deposited his sheaf of papers on his desk, closed the door to the private office, and sat down in the chair facing his superior. "You mean--?" "I mean," replied Dustin, flicking his lighter with his thumb, "that in order to prepare the projectile for launching, we've spent every cent we had, and borrowed a lot besides. Theodore Dustin, Inc. is flat broke, and the plant is mortgaged from roof to drains. If we don't win that reward our creditors will be picking our bones in thirty days." "Mr. Dustin." A female voice, apparently issuing from empty air, spoke his name. He turned to the radiovisiphone, a plain-looking disc resting on a small pedestal at his elbow. It was wireless, and contained no buttons, levers or controls of any kind. "Yes." As he spoke, the picture of his information clerk flashed on the disc. The word "Yes" had completed the connection. "Mr. Evans of the 'Globe' would like to know if you are ready to interview the representatives of the press." "Any other reporters waiting?" "There are twenty-seven in the reception room. Mr. Evans says you told them all to come at once." "I did," replied Dustin. "Send them up in five minutes. Off." When he spoke the word "Off," the picture disappeared, the connection having been broken by this word uttered alone with sharp emphasis. While Roger went out for chairs, he rose and walked to the window. For some time he stood there, gazing at the smokeless,

chimney-less factories beneath him. During twenty of the thirty years of his life, or until 1954, there had been chimneys on these factories. Combustion--the burning of coal and oil--had been necessary to keep their wheels turning. But Dustin had changed all this by his invention which economically captured and stored the energy of the sun, converting it into electricity for light, heat and power, and putting manufacturing on a newer, cleaner basis. Now, at the age of thirty, he had lived to see his sun power units in almost universal use.

Over the Moon (Scholastic Gold) Jun 13 2022 The highly anticipated new novel from Natalie Lloyd, the critically acclaimed, bestselling author of *A Snicker of Magic!* Twelve-year-old Mallie knows better than to dream. In *Coal Top*, you live the story you're given: boys toil in the mines and girls work as servants. Mallie can't bear the idea of that kind of life, but her family is counting on her wages to survive. It wasn't always this way. Before the Dust came, the people of Coal Top could weave starlight into cloth. They'd wear these dreaming clothes to sleep and wake up with the courage to seek adventure . . . or the peace to heal a broken heart. But now nothing can penetrate Coal Top's blanket of sorrow. So when Mallie is chosen for a dangerous competition in which daring (and ideally, orphaned) children train flying horses, she jumps at the chance. Maybe she'll change her story. Maybe she'll even find the magic she needs to dream again. But the situation proves even more dangerous when Mallie uncovers a sinister mystery at the heart of Coal Top's struggles -- a mystery some powerful people will do anything to protect.

To the Moon! Feb 02 2024 Neil's imagination takes him on a trip to the moon. Join him as he explores mountains and hills, spots a famous astronaut's footprints, and collects space rocks for his science project.

The Moon Book Jan 01 2024 A guide to conscious living through the moon and her phases, incorporating wellness rituals, spellwork, and witchcraft for the modern seeker. We all know the moon. We all have a relationship with it. The earliest people obeyed her orbit, timed their months and holidays and celebrations and agriculture to the moon; the echoes of that system are still visible today, though the connection to the moon is often forgotten. Sarah Faith Gottesdiener is the leader of a

movement to remind us of that lineage, guiding our rhythms and our sleep, our energy and our emotions, reminding us of our humanity and our magic. In her self-published *Many Moons Workbooks* and *Lunar Journals*, as well as her sold-out classes, she has guided over 50,000 readers to a deeper relationship with the moon, and through it, with themselves. This evergreen book will be an informative and comprehensive guide to lunar living, incorporating radical, self-empowering, and magical tools and resources for the beginner and experienced lunar-follower alike. Depending on where we are in our lives, depending on what we are feeling or what is happening around us, the moon allows us a space to invite ritual into our daily lives. *The Moon Book* will provide a framework on how to utilize the entire lunar cycle holistically, while offering ways for the reader to develop a personal relationship with their own cycles—energetic, personal, and emotional—through the lens of the moon's phases.

[Far Beyond the Moon](#) Sep 16 2022 From the beginning of the space age, scientists and engineers have worked on systems to help humans survive for the astounding 28,500 days (78 years) needed to reach another planet. They've imagined and tried to create a little piece of Earth in a bubble travelling through space, inside of which people could live for decades, centuries, or even millennia. *Far Beyond the Moon* tells the dramatic story of engineering efforts by astronauts and scientists to create artificial habitats for humans in orbiting space stations, as well as on journeys to Mars and beyond. Along the way, David P. D. Munns and Karin Nickelsen explore the often unglamorous but very real problem posed by long-term life support: How can we recycle biological wastes to create air, water, and even food in meticulously controlled artificial environments? Together, they draw attention to the unsung participants of the space program—the sanitary engineers, nutritionists, plant physiologists, bacteriologists, and algologists who created and tested artificial environments for space based on chemical technologies of life support—as well as the bioregenerative algae systems developed to reuse waste, water, and nutrients, so that we might cope with a space journey of not just a few days, but months, or more likely, years.

The Marriage of the Moon and the Field Sep 28 2023 Poetry. "The poems in Sunni Wilkinson's THE MARRIAGE OF THE MOON AND THE FIELD show us history, affection, private struggle, and the common life with a kind of grave, irony-tinged happiness that is rare in the poetry of our time. Her poems turn away from complaint, as though she had set out to reveal instead the domestic life of intelligence in all its color, warmth, and depth. This is a very fine debut volume, worth treasuring; and more are sure to follow." ♦ Christopher Howell "There is much of wonder in a first book of poems: a new voice, a freshness, other ways of being and believing. And so it is with Sunni Brown Wilkinson's THE MARRIAGE OF THE MOON AND THE FIELD. There are marvelous poems here, poems that range through the world: Vienna, Juarez, Andalusia, Mozambique, Venice. The poet tells us 'I've looked into the world and found / my own life reassembled and given back to me / with broken glass and a birdsong.' There are poems of family (parents, children, grandparents), our primal world, and there are poems of immigrants, asylum seekers, the displaced. And weaving through all of them there is a sweet charity, a belief in grace, and a tenderness toward existence. There is as well a recognition that tragedy and loss make up a part of our lives, but in Wilkinson's vision these can be redeemed since 'we're verses with a space in between / for our own small hallelujah.' These are poems that 'you can ride...into tomorrow.' Sunni Wilkinson is a welcome new poet for our times." ♦ Joseph Stroud "Sunni Brown Wilkinson's poems sustain a compelling tension between the macro and micro worlds. Scientific facts of the physical realm collide with intimate interiorities. She turns a steely eye and a tender heart toward the experience of living fully in the rush of the NOW and the flickering echoes of what came before. These are lushly rendered poems to savor and/or to devour." ♦ Nance Van Winckel

The Book of the Moon Jun 06 2024 The BBC's "face of space" explores all things lunar in this comprehensive guide to the folklore, facts, and possible futures of our only natural satellite. Have you ever wondered if there are seasons on the moon or if space tourism will ever become widely accessible? So has Dr. Maggie Aderin-Pocock, astronomer and

host of the BBC's docuseries, The Sky at Night. In this lucidly written guide, Aderin-Pocock takes readers on a fascinating lunar journey. Aderin-Pocock begins with a basic overview—unpacking everything from the moon's topography and composition to its formation and orbit around the Earth. She examines beliefs held by ancient civilizations, the technology that allowed for the first moon landing, a brief history of moonazing, and how the moon has influenced culture throughout the years. Looking to the future, she delves into the pros and cons of continued space travel and exploration. Throughout the book are sidebars, graphs, and charts to enhance the facts as well as black-and-white illustrations of the moon and stars.

The Shade of the Moon Mar 30 2021 In this eagerly awaited addition to the dystopian series begun with New York Times best-seller *Life As We Knew It*, Jon Evans is one of the lucky ones--until he realizes that escaping his safe haven may be the only way to truly survive.

[The Book of the Moon](#) Jul 27 2023 Taking care of the Moon (the heart) in ourselves is the secret of happiness, but unravelling its messages requires that we learn its mysterious, non-linear, trans-logical language. "Being in touch with our feelings" is only part of it. To follow the Moon down into our hearts is a journey into another reality, the interior psychic world, where our souls collide with ghosts from our past. Intuition, the Mother, Family, Healing and being healed -- these are all lunar topics. The story unfolds against a shifting backdrop of epochal changes in our cultural relationship to what we were foolishly taught to call "the Feminine", forgetting that men have Moons too! This book takes a fresh look at the moon, including new insight into the moon's phases, the moon's declination and the "out of bounds" moon.
