The Modern Pistol and How to Shoot Sep 04 2021 There is now no use learning revolver shooting. That form of pistol is obsolete except in the few instances where it survives for target shooting, or is carried for self-defence; just as flintlock muskets even now survive in out-of-the-way parts of the world. If a man tries to defend himself with a revolver against another armed with an automatic pistol he is at a great disadvantage. The automatic is more accurate than a revolver, as the "blow-back" does not vary as much as does the escape of gas past the cylinder in a revolver. The bullet in the revolver has to jump into the cylinder, whereas in the automatic it is already fitted up against the rifling, before being fired. The single-shot pistol is the most accurate of any, there being no escape of gas. The automatic has not only a much longer range than the revolver (although the popular idea that it can be shot accurately at a thousand yards or more is nonsense) but it cocks itself instead of having to be cocked by the thumb, or trigger finger. Cocking by trigger-pull is such a strain on, not only the trigger finger, but the whole hand, that, after a few shots, good shooting cannot be made. I won all my rapid-firing revolver competitions using the single action and cocking with the thumb, as this rested my trigger finger. With the automatic, cocking is unnecessary and, with its lighter recoil, good scores in rapid firing are very much easier to make. The penetration of the nickel-coated

automatic bullet propelled by its big charge of nitro powder is very great. A man brought me a "pistol-proof" cuirass to test; I put a bullet at twelve yards clean through it and then through two "bullet proof" ones, placed one behind the other (I used a regulation U. S. .45 Automatic pistol.) This was before the war. The inventor was disappointed. He had experimented only with revolvers shooting soft leaden bullets and these his cuirass had stopped. Unfortunately, in its present comparatively imperfect development, the automatic is the most dangerous firearm of all pistols for a novice to handle. The long barrel of a rifle can be struck aside if a beginner swings it round and points it at the instructor or a nearby spectator, but the short barrel of a pistol is easily pointed at and with difficulty brushed aside by the unfortunate person standing near a "brandishing" and "flourishing" man who is learning to shoot. In spite of all warnings even those who ought to know better do this swinging about. In fact, it is the recognized way of handling a pistol; according to reporters, they always say So and So "was brandishing a pistol" if he happens to be armed.

The Perfect Pistol Shot Sep 16 2022 "You will either master the pistol or the pistol will master you." To fire perfect shots, you must train for perfect shots. Whether you want to shoot squirrels, punch holes in paper targets, or defend your home, there is only one path to achieving consistent accuracy with a handgun: mastering the fundamentals of marksmanship. Written by a former U.S. Marine Corps firearms instructor who has taught more than a thousand law enforcement, military, and security personnel, The Perfect Pistol Shot uses succinct lessons, uncommon exercises, and real-world stories to provide a fresh look at a vital topic for all gunmen. It includes: The single most important "trick" to perfecting handgun marksmanship A simple concept for learning how to shoot a gun twice as fast A series of unique "Prove It" exercises that allow you to test the concept offered without the pressure of actual shooting An entertaining chapter on guns, gun magazines, and gun gurus that will help you make wiser choices about your training Knowing how to engage targets is valuable for the defensive shooter, but if "engaging" doesn't translate into "hitting," what's the point? You must have a solid foundation on which to build tactical skills. Your reward will be conversion

from just another hapless shooter into an independent marksman.

The Advanced Pistol Marksmanship Instructor's Manual April 11 2022 Acquiring the ability to accurately shoot a pistol is no simple matter. One should not assume that the art of advanced pistol marksmanship is fully realized immediately upon reading a training manual on the fundamentals and techniques of pistol shooting; nor completely understood after having received a few hours advice and instruction from a qualified coach or expert shooter. To become a top pistol shooter and able to produce consistently high scores, one must learn to perform all the fundamentals of shooting, acquire certain definite habits, achieve flawless coordination - and above all - have a capacity for the intense concentration essential to exercising a high degree of mental control. For this, one must train. It is difficult, if not impossible, to establish a universal system of training in pistol marksmanship which will cover all cases - one that can be adapted to each shooter's technique or special need. Training pistol shooters requires an individual approach. There is no single pattern or system for the organization of training that will entirely meet the individual requirements of all competitors, nor can one ever be expected. This is the reason knowledgeable coaches take the peculiarities of an individual - such as experience, degree of preparation and fitness, and other items - into account. They use these, and by relying on their own experience, devise a training program which allows special consideration for each shooter's capabilities. In spite of the difference in details, technique or method, there is much that is common to the training of advanced marksmen, that - in the opinion of leading coaches and shooters, applies to everyone, without exception. This manual endeavors to present, in a detailed, comprehensive manner, these universal applications. Advanced pistol marksmanship training must of necessity, avoid the involved and exceedingly complex because it is an activity whose participants form a great cross-section of our nation

target shooting. The book is organized into nine sections and over 60 deliberately short chapters. First the basics: Part A - Target Shooting Basics - introduces the different shooting disciplines available. Part B - Firearms and Shooting Equipment - covers the different rifles, handguns, shotguns, black powder and airguns used by target shooters. Then we look at the major shooting disciplines which I have grouped into: Part C - Target Rifle Disciplines - provides a short overview of each of the main target rifle disciplines, such as Fullbore, Smallbore, High Power, Benchrest and Air Rifle. Part D - Target Pistol and Gallery Disciplines - covers target pistol shooting on so-called Gallery ranges. Part E - Historic Arms Disciplines - introduces shooting with black powder and muzzleloader firearms. Part F - Military and Practical Disciplines - provides an introduction to disciplines involving service weapons and military-style competitions. Part G - Field Sports Disciplines - as the name suggests, target disciplines based around field sports, such as Clay Pigeon and Field Target (Air Rifle). And finally we cover: Part H - Shooting Techniques - introduces marksmanship with rifles, handguns, shotguns and airguns. Part I - Specialist Skills - a group of chapters introducing skills and knowledge, such as the correct cleaning of firearms, hand loading ammunition, and the selection and fitting of sights. We have tried to keep each 'chapter' as short as possible, and provide references to further information (especially on the Web). More importantly we provide contact details for each of the target shooting disciplines. We hope you enjoy this handbook and it helps you get the most from target shooting.
