

Principles of Ecology

Section 2 Flow of Energy in an Ecosystem

Main Idea

Details

Scan Section 2 of the chapter. Make a list of the ways in which organisms obtain energy.

Accept all reasonable responses, such as using light energy, eating food, and breaking down dead organisms.

Review Vocabulary

energy

Use your book or dictionary to define energy. Then name the ultimate source of energy for Earth.

the ability to cause change; the Sun

New Vocabulary

autotroph

biomass

carnivore

decomposer

detritivore

food chain

food web

herbivore

heterotroph

omnivore

trophic level

Use your book or dictionary to fill in vocabulary terms in this paragraph about food chains.

In a food chain, matter and energy move from autotrophs to heterotrophs to decomposers. A food chain is made of many steps; each organism in the food chain represents a step called a trophic level. An herbivore is a heterotroph that eats only plants, whereas a carnivore preys on other heterotrophs. An omnivore eats both plants and animals. Nutrients are returned to the soil, air, and water by detritivores. A model that shows all the possible feeding relationships at each trophic level is called a food web. If you were a scientist and you wanted to determine the weight of living matter at a certain trophic level, you would measure the biomass.

Academic Vocabulary

foundation

Use foundation in a sentence which shows its scientific meaning.

The foundation of survival of organisms is energy flow.

Principles Of Ecology Worksheet Answers Chapter 2

Population Ecology John H. Vandermeer, Deborah E. Goldberg, 2013-08-25 The essential introduction to population ecology now expanded and fully updated Ecology is capturing the popular imagination like never before with issues such as climate change species extinctions and habitat destruction becoming ever more prominent At the same time the science of ecology has advanced dramatically growing in mathematical and theoretical sophistication Here two leading experts present the fundamental quantitative principles of ecology in an accessible yet rigorous way introducing students to the most basic of all ecological subjects the structure and dynamics of populations John Vandermeer and Deborah Goldberg show that populations are more than simply collections of individuals Complex variables such as distribution and territory for expanding groups come into play when mathematical models are applied Vandermeer and Goldberg build these models from the ground up from first principles using a broad range of empirical examples from animals and viruses to plants and humans They address a host of exciting topics along the way including age structured populations spatially distributed populations and metapopulations This second edition of Population Ecology is fully updated and expanded with additional exercises in virtually every chapter making it the most up to date and comprehensive textbook of its kind Provides an accessible mathematical foundation for the latest advances in ecology Features numerous exercises and examples throughout Introduces students to the key literature in the field The essential textbook for advanced undergraduates and graduate students An online illustration package is available to professors

Ecology Michael Begon, Colin R. Townsend, 2020-11-17 A definitive guide to the depth and breadth of the ecological sciences revised and updated The revised and updated fifth edition of Ecology From Individuals to Ecosystems now in full colour offers students and practitioners a review of the ecological sciences The previous editions of this book earned the authors the prestigious Exceptional Life time Achievement Award of the British Ecological Society the aim for the fifth edition is not only to maintain standards but indeed to enhance its coverage of Ecology In the first edition 34 years ago it seemed acceptable for ecologists to hold a comfortable objective not to say aloof position from which the ecological communities around us were simply material for which we sought a scientific understanding Now we must accept the immediacy of the many environmental problems that threaten us and the responsibility of ecologists to play their full part in addressing these problems This fifth edition addresses this challenge with several chapters devoted entirely to applied topics and examples of how ecological principles have been applied to problems facing us highlighted throughout the remaining nineteen chapters Nonetheless the authors remain wedded to the belief that environmental action can only ever be as sound as the ecological principles on which it is based Hence while trying harder than ever to help improve preparedness for addressing the environmental problems of the years ahead the book remains in its essence an exposition of the science of ecology This new edition incorporates the results from more than a thousand
